Actually your own words have proven that you can learn it. You say you can
consistently recognize about half the alphabet. So you have demonstrated

your ability to learn it.

Perhaps you just haven't spent enough time on it or used a poor training method (there's way too many of those around). Most people's expectations of how long it will take are unrealistically short. For the average person, it will take 1/2 hour per day every day for 60 days.

Now writing it down could be a problem due to dyslexia but there are ways around that. You don't have to write it down. You can ask to be allowed to say the characters into a tape recorder. You could dictate the characters to a VE to write down for you. You could simply jot down notes and answer the questions and not worry about solid copy. Again if there is a risk of writing it backwards, you could have the VE write down what you tell him/her. Naturally such accomodations have to be set up in advance.

You must have run into some crummy people. That is not necessarily true of all groups.

You are painting with a very broad brush. There are many amateurs who do not jab the Technicians. These days the membership of most clubs is about half Technicians. Perhaps you need to run with a different club.

you can ask but you can't realy enforce that right and why shoudl he or
I have to for a skill that is not required

but there are neough of them your self for example presumeing you know
what another person can do I am can keep about half the letter in my
head at a time but no more than and I spent many years at with little
success

you are judgemental and all but calle dhim a liar for saying he can't
do it

Of course, the same thing is possible on SSB communicating
phonetically.

Let's require a EE degree instead of Morse Code.

Well, with the 4 or 5 CW signals that are on most bands at any given
time (except VHF and up during contests, BTW), who would notice the
loss. No offense, but if CW ops want to keep the territory, they'd
better start populating it.

Yup, that increased the number of CW ops by a lot. Typical old style ham response. Moron. Pure and simple moron.

This is why CW is losing the battle. Not because it's a lost art, or something that's not worthwhile, but because the "supporters" do nothing but complain.

I don't want to see CW go away; I think it's a "good thing", and should stay around, especially for things it still does well, such as EME. Of course this is not the place to speak of "advanced" things like EME, after all, it's only been around for 50 years.

I love it too. It's a great mobile band, but I don't have a mobile antenna for it. I have used it with a tuned dipole a good bit. Even talked to England once. It is mostly stateside comms, but its like you said, a lot of gentlemen and gentlewomen! I am hoping to get an antenna for it in the near future for both the car and my new location.

73 for now.

PS there is a sixth channel only available in and around Alaska, but I forget the frequency. It is an emergency only channel.

Dumb argument.

CW is only being removed as a compulsory exam element. Oddly enough,
now that it is not compulsory, it's popularity is growing!

Which is most likely, actually. We broadcast a lot more voice than CW,
  Ever noticed how many watts of television, FM radio and AM radio are

out there versus CW?

CW is effectivly dead except for those that wish to keep it alive.
Similar to the old car collectors. Nothing wrong with it. beautiful
collector items, but not really part of the current world.

Bet no one from the antenna newsgroup even bothers to respond with
anything worthwhile. This is, after all, a group of people that thinks
the world ends at 10 meters. (Except for a very very few, and you know
I'm not speaking of you).

tom

Does Harold have an e-mail address?

You can send it to me privately, if preferred, at:

davec2468@takeaim.com (and remove "take" from the address)

Thanks,

The only one I know is a guy in the Orkneys. GM3POI - his name is Clive Penna. Apparently he has a manic episode every nine days regular as clockwork - and that's pretty bad from what Ive been told. Broke up his marriage apparently.

I can't see him helping you with info though. He's not the type - but then perhaps that's just another symptom.

Brian.

I bet no one from the antenna newsgroup bothers to respond because the topic doesn't have anything to do with antennas. There are plenty of other newsgroups for those who favor the endless CW/no CW arguments.

My $0.02:  Passing the CW element requires the acquisition of a skill.
Passing the "written" element requires memorizing answers to a test where
the answers are handed out ahead of time.  Some accomplishment, eh?

Actually, I feel into this. However after posting this message I am
killfiling the topic.

73/72 to all for now. On to important topics like how to get an
antenna up in this restricted neighborhood without any trees!

Thank you.

If I may add something to that...
I wouldn't like to see Morse totally disappear, but I'm against its
compulsion for trainees. I fully agree that in some conditions a Morse
tone will get through where voice is an unintelligble mush, if heard at
all, but apart from prisoners tapping out messages on pipes its days as
an *essential* comms tool are pretty much over.

We've all got to move with the times and these days Morse is on a par
with a runner carrying a message in a cleft stick. There will be some
who enjoy using it and I hope they find enough fellow enthusiasts of the
arcane art to keep themselves happy while the rest of us communicate
more naturally.

CW is just memorizing the sounds . That is not a skill. Yes, I do have the 20 wpm extra. Got up to speed, passed the test, never used it on the air. I still listen to some about once a month just to see if I can still get any of the characters.

A skill is more like repairing a piece of equipment or building something. Maybe even the ability to put together an interisting conversation instead of the usual WX and Signal reports.

I don't think it is as effectice on SSB.  Of course, you can use the
symbols that were derived from CW (like QTH) but I think morse code is a
more direct communication in these circumstances because it doesn't
involve voice/pronunciation differences between languages.  The symbols
are universal and immediately understood.
```

Phonetic usage (alpha bravo whiskey hotel etc) is primarily based upon English.

I think we need to face the fact that ham radio, in general, is not as
necessary or as "needed" as it was even 20 years ago.

It's a hobby.  It remains a service but it is a hobby.

CW,SSB and any other mode you choose is not that much NEEDED.

CW being the simplest form, remains the form of choice when ALL
infratructural resources are gone.

Memorizing a sound is no more of a skill than memorizing an answer. In any case. I can memorize sounds. I can't memorize answers. I have to know the subject to get the answer right. If people think that CW is of any importance, they will learn it whether the test requires it or not. Those who think that it will die if it is not required are just afraid that it really is useless.

Actually, there are various sign languages, often corresponding to national languages, and I've been told that although they tend to have more in common than spoken languages, a person who can speak one can't necessarily understand the others.

Jack Hamilton
jfh@acm.org

Though in a state of society some must have greater
luxuries and comforts than others, yet all should have
the necessities of life; and if the poor cannot exist,
in vain may the rich look for happiness or prosperity.

The legistlature is never so well employed as when they look to the interests of those who are at a distance from them in the ranks of society. It is their duty to do so; religion calls for it; humanity calls for it; and if there are hearts who are not awake to either of those feelings, their own interests would dictate it.

Sir Lloyd Kenyon, Rex vs. Rusby, 1800

Program SKYTRIG - SKYWAVE TRIGONOMETRY

With an input of elevation angle, layer height and critical frequency, the program calculates skywave path distance, groundpath distance, spreading (dispersion) loss, field strength from a 100 watt transmitter, and the MUF.

The program can be used for guidance on the low MUF's and the geometry of near vertical incidence radio paths over short distance groundpaths.

Elevation angle is NOT the angle at which an antenna radiates the strongest signal. It is the angle of the path taken by the radio wave between two places on the Earth's surface and is nothing to do with an antenna.

The program notes provide some elementary information on the heights and behaviour of the various ionospheric layers in sunlight and in darkness. Also on factors which affect received field strength such as operating frequency being greater than MUF.

Download in a few seconds program SKYTRIG from website below.
Filesize = 42 kilo-bytes. Run immediately. Or you can open/run it without downloading.

....

========================
Suggest you don't make the enclosure too small for a matching box (tuner).
Any inductor too near metal , will affect the inductor's Q
A rule of thumb is to keep the inductor away from the enclosure not less than 1 diameter(of the inductor)
For this reason I am constructing an antenna matching unit in a plywood enclosure or perhaps MDF ,although I understand MDF is no longer used in the USA,because in contains phenolic resin. Perhaps someone in the know on this NG can confirm this.

Hi Frank,

It sounds like you are going to an extreme that will create as more problems than it solves.

There is very little Q change in an aircore inductor of typical form factors when it is brought near sheet metal unless that sheet metal is in the core axis within a core diameter or less. The reason for this is air does not saturate, and the magnetic flux simply moves to a better spot.

There are only two exceptions to the generally very small Q reduction by a coil being near metal. The first is when the inductor is operated very near self-resonance, at which point any stray capacitance can seriously affect coil Q. The second is when the metal totally encloses the inductor and is so close it reduces inductance a significant amount.

MFJ has that problem is some small tuners, where the end of a 2 or 3" diameter coil is mounted right up against the sheetmetal (nearly zero spacing) and the when the cover is installed the other end has metal a fraction of an inch away. Unloaded inductor Q drops about 45% from 220 to 120 in that tuner whe the full coil is being used, and it is an exceptionally bad layout. Had they stayed an inch or two away from the ends of the coil it would not be an issue.

When you place components in a "transparent" box, you now have significant new problems. You have no reliable groundplane. Wiring is an issue. There also is no containment of fields, you have created a small antenna in the room.

Most of the problems in tuners are caused by the tuner not have enough capacitance or using an inductor with crappy Q to start with, not by the box. You have to work at it pretty hard to make a design where the box kills the Q, but it is easy to make a box that radiates harmful RF into the area around the tuner.

73 Tom

5 Band Cubical Quad (20, 17, 15, 12, 10M.)  Can be used to make either
a 2 element or 5 element quad. Spreaders are heavy duty fiber glass
construction. Boom is 32 feet long, with spider mounts, boom plate.
You will have to provide the wire to complete assembly. Contact
Everett, WA3DVO, at: wa3dvo@msn.com  (Pick up only in Maryland
near WashDC.)

I have moved my junkbox surplus stuff to a new website.
http://www.hamradparts.com

1N4148 Diodes $3.00 for 100, $4.00 for 200
1N4001 - 1 Amp 50v General Purpose Rectifier Diodes - $3.00 for 50

33pf NPO Caps, SMT 0805, 50V - $3.00 for 100
150pf NPO Caps, SMT 0805, 50V - $3.00 for 100
220pf NPO Caps, SMT 0805, 50V - $3.00 for 100
390pf Caps, SMT 1206, 50V - $3.00 for 100
1500pf NPO Caps, SMT 0805, 50V - $3.00 for 100
3300pf Caps, SMT 0805, 25V - $3.00 for 100
.1uF Caps, SMT 0805, 50V - $3.00 for 100

SPECIAL SMT PACK - 50 of each listed value $9.00
350 total parts

2N3704 NPN TO92 - 20 for $2.00
2N2907 PNP TO92 Package - $4.00 for 50
2N3904 NPN TO92 Package - $4.00 for 50
2N2222 NPN TO18 (metal) Package - 5 for $1.00
MMBT4403 PNP SMT transistor - 50 for $4.00

SPECIAL: 100pcs PN2222A Motorola $7.00- FREE SHIPPING

2N2222 NPN TO92 Package - $4.00 for 50
The 2N2222 is a bulk transistor...meaning the part is not labeled.
They ship in a Zip Lock packet and the packet is clearly labeled.

2N3906 PNP TO92 Package - $4.00 for 50
The 2N3906 is a bulk transistor...meaning the part is not labeled.
They ship in a Zip Lock packet and the packet is clearly labeled.

IRF510 - MOSFET AMP TO220 - 4 for $5.00

Crystal Ladder Filters anyone?
3.575611 Mhz HC49 Crystals - 5 for $2.00
4.9152 Mhz HC49 Crystals - 10 for $3.00
9.830 Mhz Crystals (SS2 package) - 20 for $3.00
LM7805ACV 5v Positive Voltage Regulators (TO220) 5 for $2.00
LM386N-1 - Audio Amp 6 for $5.00

Sticky Back Rubber Feet for your projects, self adhesive - 8 to a strip - 2 Strips for $1.00

Panasonic Wall Warts - 12VDC, 500mA (center negative) $6.00 each
If you need center positiove, cut off the end and reverse it. I use these to power my
rock mites, my TT2, and all of my homebrew test gear.

8pf NPO Ceramic 50 for $3.00
11pf NPO Ceramic 50 for $3.00
12pf NPO Ceramic 50 for $3.00
22pf Ceramic 50 for $3.00
470pf Ceramic 50 for $3.00
560pf Ceramic 50 for $3.00
.1 uF (104J) NPO Ceramic 50 for $3.00
.01uF (103K) Ceramic 50 for $3.00

SPECIAL PACK - 25 of each listed ceramic $10.00
200 parts total

Cash, check, paypal now accepted

Paypal to: orders@hamradparts.com

Add $3.00 shipping to any order under $50.00 unless you are ordering the special Motorola PN2222 transistors.

Anybody know if this amplifier will work properly with the newer solid state rigs such as the Icom IC-706 or IC-735?

I know that some older linears don't present a very good load to the newer solid state rigs so that the VSWR that the transceiver sees is too high.

I have seen a Siltronix SLM-100 HF linear amplifier for sale, specifications claim 3-30 MHz coverage and 100 watts output.

Google shows only limited information on this beast.

Do any of you know anything about this amplifier?

It's fairly obvious that it was targeted towards the CB market, and some of the amplifiers that are targeted to that market don't produce an output that'st very clean. Any of you know how clean an output this SLM-100 should put out?

I'd like to get something I can use with my Yaesu FT-817.

I have the following Motorola hand mics for sale:

New
HMN 1001B DTMF
HMN 1010B
HMN 1031A DTMF
HMN 1049A
HMN 1061A 2EA

Used
HMN 1001A
HMN 1001B
HMN 1056A
HMN 3013A DTMF
HMN 4005A
MBTMN 1025A
TMN 6054A

Thanks
Frank

I'm curious about what your opinions of the ARRL Handbook. In terms of technical content, such as theory, construction projects, etc., which years are generally regarded as the best of the modern (solid state) era, and which issue for the vacuum tube era?

I'm interested in hearing about specifically those issues with really useful construction projects in the areas of complete homebrew receivers and transmitters, test equipment for the bench and field use and articles about RF circuit design.

Thanks for your opinions.

Hello all,

I did read several messages on the internet about a too low TXaudio on
FM with a FT1000(D) also when you work with a desktopmike from Yaesu
```

like the MD100,the MD1C8 or MD200.
My FM-txaudio is also low but my FM-dev is full open.
The SSB txaudio is very good is i have no complaint about that.I did also
adjust VR8305 on the SWA unit but no succes.
Is there any mod for this or where i can adjust the FM-dev more except
the FM-devation topaccesscontrol from the FT1000 ?-- Kind regards,
Hans Pluijgers

I guess it depends on what you want to build. The latest issue is best
in the sense that you can still get all of the parts the construction
projects call for.

Many of the projects carry over from issue to issue -- it's hard to
single one out.

Your best bet may simply be to buy the CD version, and get one for
each decade going back as far as you want.

What's the purpose of ham radio, To have fun talking about rigs and weather, or to be able to communicate?

To be able to communicate when no one else can communicate and to advance radio knowledge & theory?

What does part 97 say about this?   Why does the ARRL ignore it?

When CW is lost, new hams will be just like CB'ers and SWL's, or some other lower life form of radio hobbiest. You name it.

Looking for AM transmitters of the type used for broadcasting. Want something in the 500 to 2000 Watt range. Must be all solid state. Typical examples include: Harris SX-1A, Gates One, Armstrong 1000B, Omnitronix AM 1000A, etc.

I suspect the best place to find one may be at radio stations who are
surplusing gear.   Could use some advice on how to contact them.

Any ideas will be appreciated. Please reply online as my JGoogle email

address is no longer valid.

Vinton

Will the CW only portions of the lowbands be retained, or will those go away as well?

TROLL!

CW isn't going away. It just won't be a requirement for a license.
RTTY hasn't died either.

I should be able to keep this from getting to me, but sometimes I just feel like responding to the attempted intimidation by these elitists.

Mate, your key is only silent from the neck, up.

Due to dyslexia, I am unable to learn much Morse Code. I can consistently recognize about half of the alphabet and none of the numbers. Morse Code might as well be edoC esroM for all the good it will ever do me.

In spite of this, I manage to be a responsible member of the ham radio community and I'm damn proud of my service to RACES, to my club as its treasurer and to the county as a volunteer communicator. My UHF/VHF points in last year's Field Day exceeded the points of our HF stations combined. Lower life form, indeed! The nerve of you!

You may get down off your high horse (or should it be "High Morse"?) and apologize for all those jabs any old time it pleases you. I'll be here.

In article <NOw6g.6936$An2.3601@newsread2.news.pas.earthlink.net>,=20
cw.h@m.bands (known to some as Silent Key) scribed...

> What's the purpose of ham radio, To have fun talking about rigs and
> weather, or to be able to communicate? =20

=09The Amateur Radio Service serves many purposes. Here's a relevant=20
quote from Part 97.

-=3D-=3D-=3D-=3D-=3D-=3D-=3D-=3D-

=A797.1 Basis and purpose.

The rules and regulations in this Part are designed to provide an=20
amateur radio service having a fundamental purpose as expressed in the=20
following principles:

(a) Recognition and enhancement of the value of the amateur service to=20
the public as a voluntary noncommercial communication service,=20
particularly with respect to providing emergency communications.

(b) Continuation and extension of the amateur's proven ability to=20
contribute to the advancement of the radio art.

(c) Encouragement and improvement of the amateur service through rules=20
which provide for advancing skills in both the communications and=20
technical phases of the art.
```

(d) Expansion of the existing reservoir within the amateur radio service=20
of trained operators, technicians, and electronics experts.

(e) Continuation and extension of the amateur's unique ability to enhance=
=20
international goodwill.=20

-=3D-=3D-=3D-=3D-=3D-=3D-=3D-=3D-=3D-=3D-=3D-=3D-

=09I sure as heck don't see anything in there AGAINST talking about=20
"rigs and weather," or anything else within reason.

=09What I do see, in paragraph (c), is the use of the word=20
'advancing' together with 'communications and technical phases of the=20
art.'

=09That, to my eyes, says "value the past, but look to the future."=20
The simple truth is that, while CW remains a mode that would probably be=20
usable under nearly any conditions, it is no longer necessary as a=20
license requirement.

> To be able to communicate when no one else can communicate and to advance
> radio knowledge & theory?=20

=09Exactly. The advance of radio knowledge and theory over the past=20
two or three decades has reduced CW's importance as an operating mode.=20
It still has value, to be sure, but (again) I don't see any need to make=20
it a license requirement.

> What does part 97 say about this?   Why does the ARRL ignore it?

=09What evidence do you offer that they're ignoring anything?

> When CW is lost, new hams will be just like CB'ers and SWL's, or some
> other lower life form of radio hobbiest. You name it.=20

=09Well, then, I guess I'll be a "lower life form" in your eyes,=20
because I haven't ever really had that much interest in CW as an=20
operating mode. Too slow and frustrating for me, and I've not used it in=20
over 20 years, since I got my first license (in 1977 -- look up WD6EOS=20
in an old Callbook) and did exactly one CW QSO on the air. After that, I=20
went over to voice and RTTY modes exclusively.

=09Others have been predicting the "Death of Ham Radio" for years. We=20
heard it when the Internet came to be well known, we heard it when=20
Echolink and IRLP started to catch on, and we're hearing it again with=20
the potential elimination of Morse knowledge as a license requirement.

=09But you know what? The Amateur Radio Service is alive and well, at=20
least in my part of the country. Lots of activity on HF AND the local=20
repeaters, still a fair number of CW QSO's on the bands (this from=20
tuning around just last week), and the local repeaters continued to work=20
very well indeed after the Nisqually Quake of 2001. I know. I was here=20

for it.

=09When the FCC writes to me, and tells me to turn in my license and=20
cease operating because the Amateur Service is no more, THEN I will=20
believe that it's dead.

=09Until then, let me say thank you for sharing your opinion with the=20
group.

Here's one that I haven't even seen:

Not everyone speaks readable English, but anyone that knows Morse can copy any language and read it at their leisure. Also, those who don't speak English well can often spell the words well enough to read...

Just a thought.

Can anyone help me with research for my degree.

I'm looking for information on ham radio enthusiasts who suffer from manic depression (bipolar syndrome). I'm researching the effects of RF fields on electrical activity in the brain. It's possible that this particular form of mental illness could be specifically at risk.

Can you put me in contact with anyone who could help me?

Thanks

Gerry G.

In order to graduate school in the Navy we had to both read a punched
teletype tape and read morse code. I don't recall how fast the code was
but the test day was a bitch!

Mis-statements abound again.

Read the allocation chart in 47 CFR 97.305(a) and 47 CFR 97.305(c). What CW sub-bands?

47 CFR 395(a) "An amateur station may transmit a CW emission on ANY frequency authorized to the control operator." [EMPHASIS ADDED]

For USA Amateurs CW is authorized as stated above.

/S/ DD, W1MCE

If you really believe that morse code is an important way to communicate that should be preserved then you need to convince other hams and potential hams to learn the code. You need to convince enough hams to use code so its very usage generates excitement and makes people want to join in the fun. Almost self-perpetuating like it was in the 1950's.

Preaching (or complaining) to the choir on the radio fora about the abysmal state of things will not add one person to the ranks of key pounding hams.

So what are you going to do to increase the number of code practicing hams.

CW will not be lost in the same way that AM is not lost.
A lot of hams in the 1950's believed that SSB would cause
the death of AM and ham radio along with it. SSB operators
sounded like Micky Mouse and were known as Single Sidewinders,
undesirable snakes in the grass within the hobby, and traitors
to the traditional form of amateur radio AM communications.

Of course, that excludes the new 60 meter frequencies (I dare not call
it a 'band'.)

It is a shame that you are unable to enjoy this wonderful hobby. I look at it this way. I would have loved to be a great tenor, but I can't sing a note. As a child, I wanted very much to be an airline pilot, but I get sick as a dog in aircraft and boats. In high school, I would have given anything to be a football star, but I was too light and slow. We have to live with the cards we are dealt. Some get four aces, and some don't even get a pair. We just have to make the best of what we are given.

As an ARRL VE, I should point out that you do not have to know the code to get an amateur radio license. The test for technician is only 35 questions, and you can miss 9. That's only 70% you have to pass. You should be able to get 70% without worrying too much about pictures or diagrams. I suspect that you are not giving yourself enough credit. You stated your position with more clarity than most on these newsgroups. That tells me that your ability to think is pretty good. I believe that you would be able to pass the Techician test without any problem. Have you tried the practice tests on the Internet?

If you are in the US you do not need to look at any diagrams. Just get a
book that has the question and answers in it. Then memorise it. They are
the exect question and answers.
That will put you to the Tech license and the code may soon not be needed
for the low bands.

The newspapers and journals are full of information about warrantless wiretapping and eavesdropping. What many people do not realize is that the type of eavesdropping occurring for national security purposes is vastly different than the real world of eavesdropping and wiretapping utilized for industrial espionage, law enforcement and by your local private investigator or tech-guy that has crossed the line into illegal eavesdropping.

Now, the realistic world of eavesdropping has been thoroughly exposed in the new two-hour video called "The Red Balloon". Already recognized as the best Issue Awareness Video in 2005 at the international Aurora Awards and given a 5 Stars review in the March issue of Security Management, The Red Balloon presents the government and industry statistics about industrial espionage and eavesdropping, and how big this problem really is. It also reveals the different types of eavesdropping devices used with illegal wiretapping and eavesdropping and the novel techniques utilized by both professional and amateur eavesdroppers.

If you are curious about the eavesdropping industry then you simply must see the powerful informational video presented by one of the world's most recognized experts in the field. To learn more you can go to http://www.tscmvideo.com

I have spent a lifetime salvaging old equipment parts for affordable experimenting. Being able to buy small quantities with reasonable shipping & handling charges comes as a real blessing!

John, W8CCW

THIS TUNER WILL HANDLE 3000 WATTS. IT TUNES ANY ANTENNA 1.8 - 30 MHZ. THE 4:1 BALUN FOR BALANCED FEEDLINE IS INSTALLED AS WELL AS THE BACKLITES FOR THE METERS. TUNER HAS A FEW SMALL SCRATCHES ALONG THE SIDES, BUT OTHERWISE IS IN EXCELLANT CONDITION. I BOUGHT THIS TUNER NEW IN 1996 AND IT RESIDES IN A NON SMOKING HOME. $500 INCLUDES MANUAL, PACKING, SHIPPING & INSURANCE TO YOUR DOOR.

hardly you don't know what miliatant is

you are psuhing you milltant religionous agenda where it desn't belong.
you have the right to do that, as I have the right to post what I see
fit
your problem is that you can't face the fact I have the same rights as
you do

you want an end to defense of My Bisexaulity it can be had easiily

you mustb(and the rest must refrain from atacking ti and refrain from
using the cry or "faggot" as an arguement in the NG

it is that simple but the likes of you have proven you can't do it

And to this day he has yet to make an on topic post. I'll bet he was given
the answers while taking his ham test and still failed the first three
times. Makes me wonder if he even has radio equipment.

And to this day he has yet to make an on topic post. I'll bet he was given
the answers while taking his ham test and still failed the first three
times. Makes me wonder if he even has radio equipment.

>

If passing a Ham test was predicated upon correct spelling, he'd be a
washout.
Not only can he not spell, but he cannot comprehend what he reads.

Thanks SO MUCH to everyone involved for ruining this NG with off-topic
drivel.

Another ham group washout.  "Tis a pity.

Anyone know where I can find a pair of knobs (4 pieces) for the dual shaft voltage and current adjustments on my HP 6286A? The unit is out of production and it doesn't appear that HP/Agilent carry this part anymore. If I can't find a stock set of knobs, a non-HP substitute would suffice.

Ed   K7AAT

Can anyone help with programming the "call channel" freq that includes "tone
encoder".  I can get it programmed, and, as the book says, it will disappear
when you leave the "call channel"  However, they list steps to Permanently
install the encoded but it doesn't seem to work for me.
Thanks

  The ICOM IC-2100H is a mobile rig, not a hand-held.
```

I programmed a tone-encoded (receive and transmit tones) in the call channel memory with no problems. Go into "Call Channel" mode with the M/CALL switch, then to the VFO mode with the M/VFO switch, set it up in the VFO mode first to make sure that it works, then save it in "call channel" memory with the S.MW/MW switch.

Page 33 in the Instruction Manual gives very clear step-by-step instructions.

If ICOM has another rig with the model number 2100, it meets the requirements of Dr. Professor C.T. Yang of MIT who, when confronted with naming two different things the same name, would say "This one not equal to that one - I only did that to con-fuse you".

Hola, hola, amigos.
My name is Josep from S�ller in Mediterranean sea.
I have an old Dentron Clipperton-V 2 meters power amplifier with 1
4CX250... and delay relay amperite 6no60 but hole glass in socket...
and others problems, and I need the esquematic diagram.
You can send a electronic copy to my e-mail or a photocopy to my
mailing dress?   I will be extremely thanked.
Gracias & Greetings frm. Majorca Island.
Josep

In a few months (maybe sooner) the 5 WPM Morse code requirement will be dropped for as a prerequisite for amateur radio licenses in the U.S. A long-overdue move IMHO, and one that might rejuvinate ham radio here in much the same way that it has done in other countries that have dropped the code.

Am I answering to myself!!!!   No I dont know where you can get
a tone pad nor a mike cable.  I am still looking for a new
mike cable also as the AZDEN is just sitting there idle now for
almost a year.
                     Joe

Amateur Electronic Supply, http://www.aesham.com ,   has a nice selection of keys, ranging in price from about $10.00 for a new Ameco straight key, to more pricey high quality units.

For a beginning ham, I'd get a new cheap straight key rather than a used overly fancy model you might find on EBay.

Good luck.

The Yahoo Icom IC-781 support group is back in service and accepting new members.

If you are interested in the IC-781 check out all the links, files and other resources.

If you consider yourself knowledgeable on the maintenance matters of this radio please join and make yourself available.

You may also post questions and get involved in discussions through the message board. Here is the URL:

http://groups.yahoo.com/group/IcomIC781/

Thanks, and best of 73 OM

An interesting accessory designed and built by WRL for the Globe "Scout"
and "Hi-Bander" series.

I'm looking for a supplier of project boxes (metal). What I need right
now is a 4 x 7 x 5 in. Or numbers close to this, abt. 1/2in either way
for a little ant. tuner I want to put together.

Thanks,
Butch KF5DE

he can't

for the same reason various other can't either
>
> Do YOU have anything related to ham radio to post?

not likely he has posted that he wants to be a lurker and entertained
by the rest of us and to tell the rest of us how to posts as well

That will be the tricky part, I think. Have not yet solved the problem
with my 2003 CR-V .. but I'm still researching the issue (radio was
relatively easy .. an FT-857). So far antenna solutions have been
temporary in nature.

Phil:

Thanks for the link. I've had a very quick look at it and seems like a worthwhile read.

I'll spend a few more minutes on the site and see what I learn about the world of mobile operations.

Regards,
Lee

You said a mouthful. Oh and I agree with you. It just aint natural! I
mean imagine a guy sucking on my cock. what am I supposed to do, come
in his mouth??? Very disturbing!

I have an 2005 Outback, I have a Yaesu FT-90 dual band mobile in it. It only puts out 50 watts on 2 meters but I have not had any RFI issue's with it. I used a thru the glass antenna, which doesnt help you any. One problem with most of these newer vehicles is space, not alot of continuous smooth surfaces in them. But we love the vehicle!
Best Regards
Tim N7XAU

Alinco DJ-V5TH High Power Dual Band HT New in Box

I bought this radio from a dealer at a local hamfest at the end of February. I am always attracted to these new radios, especially small ones like this one. The problem is I never use them and they end up gathering dust in the closet. I have had this one out of the box exactly once to charge it, pressed the buttons and listened a few times and thats it. So I decided to sell it before it sits around for a few years. It is in absolutely perfect condition as new in the box as a unit can be.

Includes

* DJ-V5TH Radio
* Dual Band SMA Antenna
* High Power Battery

* AC Charger
* Belt Clip
* Lanyard
* Original Manual / Schematic
* Original Box / Packing

I have owned this radio for many years having bought it new. I had planned on installing it into my isuzu trooper but never actually managed to get around to it. It has had no more than three to four total hours of use, if that. I has mainly been sitting on a shelf waiting to be installed. It has never been installed in a car and the little use it has had was on the bench with a bench top supply. It is in excellent condition with everything except the original box.

Asking $150.00, reseanable offers considered, no trades.

Contact me at pwborders at gmail dot com

I've had no problems with thru-the-glass antennas, other than not the best signals (and losing one in a rainstorm at high speed in Montana a few years back!).

Generally VHF/UHF antennas are pretty easy to mount. Its the HF antennas that are a bear, especially with newer vehicles. My CR-V, with its swing-out rear door (vs. lift gate) is a bear. I had antenna mounts on the rear door (not a great solution), but was rear-ended recently and

now have a new door, sans antennas while I noodle on other solutions.
Yakima rack on top is inviting (but the antennas would need folded over
to get into garages (mine and parking).

Watching two men holding hands and kissing gives me the creeps less
than your intolerant letter. What two men do out of my sight doesn't
bother me at all. Skirt Chaser should do us all a favor and practice
his intollerance in the privacy of his own home.

Although I'm not about to go see that Broke Back Mountain movie I would
be happy to talk with a gay ham on the bands.

Bob AC7PN

This is way off topic for this site "Skirt", I bet some voice is telling
you to post this stuff to hide your "homo" side.  Well "Skirt", if you
really want to hide your sexuality, just keep your mouth shut!  Know
whut I mean?

*********** REPLY SEPARATOR ***********

I find it fascinating to see all the personal attacks against Skirt Chaser, but not one poster says his conclusions are wrong.

Reminds me of some years ago when Dan Quayle attacked Murphy Brown for portraying a decadent lifestyle. He got crap from all over the spectrum, but not one attacker said his conclusions were wrong either.

Food for thought.

Bill, W6WRT

Your comments indicate that have an unusual interest in the homosexual lifestyle. By appearing to be virulently anti-homosexual you come across as trying too hard to convince us that you are heterosexual. Possibly you need to convince yourself first that you don't have homosexual tendencies before trying so hard to convince others.

Really, it's ok if you are. Just accept yourself as you are and everything will be fine - eventually.

well you facts are in error

I said his conclusions were wrong

The ARRL had no real choice in allowing LARC to advertise  the cloesets
```

it had to a choice was a long and expensive legal battle that it would likely lose

as to the rest I refarined from comenting on the posters obvious sexaul issues becaus ethey were
A) obvious and
B) simple the run of a flase premises   which by the GIGO meant they rest was garbage

Skirt Chaser,

So convinced of your position, you didn't post with a real name. One thing we all can agree on: The ARRL did not hide its political position.

I want to go on record as embracing the ARRL's move, a reason that I just may join after all these years. I guess I first need to identify myself as "normal" heterosexual, although sexual identity ought not be relevant to one's standing or reputation in life.

The terms of conduct you use are appalling, homphobic imaginationl. How can youi pre-suppose what two consenting adults do privately? Do we pre-suppose what heterosexuals do? Of course not, realizing sexuality is unique.

The only act that is obviuos becomes so by the birth of children, otherwise sexuality is a private matter. And on what basis do you connect children with homosexuality, which abuses pale in comparison to heterosexual abuses with children.

A compelling example, by no means alone, is the recent spate of female teacher abuses of male minors. To draw the example further, the reality of this teacher abuse by no means speaks for female teachers in general, any more than homosexuality equates to abuse of children.

Your post, to me, seems so rife with homophobia and prejudice that you seem mentally unbalanced. Of course, I could be wrong and I could be the unbalanced one. In any case, I wish you well and hope you will begin to feel the integrity of your words suffcient that you identify your posts by real name and call.

Bob Sherin, W4ASX

a good set of reasoning if one thinks the ARRL tok it out of principle
instead calulation of the chances andcosts of a fight

Sir I would never suggest insulting oneself by your self "normal"

>
> The terms of conduct you use are appalling, homphobic imaginationl. How can youi pre-suppose what two consenting adults do privately? Do we pre-suppose what heterosexuals do? Of course not, realizing sexuality is unique.
>
> The only act that is obviuos becomes so by the birth of children, otherwise sexuality is a private matter. And on what basis do you connect children with homosexuality, which abuses pale in comparison to heterosexual abuses with children.
>
> A compelling example, by no means alone, is the recent spate of female teacher abuses of male minors. To draw the example further, the reality of this teacher abuse by no means speaks for female teachers in general, any more than homosexuality equates to abuse of children.
>
> Your post, to me, seems so rife with homophobia and prejudice that you seem mentally unbalanced. Of course, I could be wrong and I could be the unbalanced one. In any case, I wish you well and hope you will begin to feel the integrity of your words suffcient that you identify your posts by real name and call.

Hmmm ... somebody clearly failed to teach reading comprehension.  But yes it is
OK for kids to learn words that may offend prudes like yourself so long as they
don't abuse them or neglect to learn a proper vocabulary.  There is no evidence
that any word ever harmed anybody.

It's an off topic flame thread.

Please drop rec.radio.shortwave from this thread.

Thanks.

At least being homosexual keeps them away from the farm animals. Do
y'all have a branch of the Log Cabin Club out there, Fred?

No doubt it was n8wwm and kb9rqz, but what does this have to do with
rec.radio.cb?
Quit crossposting.

>The ARRL
> wanted us to embrace a sick perverted lifestyle and be one big happy
> family. To me, it was the spark that signaled the death of a once proud

So quit supporting the ARRL and encourage others to do the same.

> Now the queers have all but taken over, they're like the military wing of
> the Democratic party, and always in your face.

So you are claiming the majority of hams are gay? I'm sure there are many
that would disagree with your obvious troll post.

>It's not even safe to take
> your kids to Easter egg hunts anymore. I know you're all going to disagree
> with me, but a man touching and sucking on another man's cock and fucking
> his ass just ain't right.

I agree, and go a step further by saying that it is not right for you to be
this graphic about it.
It makes me wonder what you sit around thinking of all day long.

> The ARRL promoted this, now look what happened
> to our radio groups.

And you are promoting it with your crossposting of this graphic troll trash.

lying as normal "dr" death I see

but to answer your question the concention with rec.radio.cb is that the origainl poster posits that ARRL is responible for the near constand of Homosexaul bashing in Radio Newsgruops such CB and to another poster in the read Shortwave for that matter.

that the explanation is Bull not with standing is a on topic thread to extent it sparks a discussion of why do so many people in the Radio NG's choose to make homosexauly based attacks

as to the real reason why the radios NG has gotten into the gay bash state they have is someothing of mystery to me, since the ARRL obviously lacks such power

you know Steveo if some is Homosexaul why would they need to get such a
taste out of their mouth?

Brian,

The easiest way is to pick a card that has a line level output. Very few have it. It simplifies a lot of interfacing issues.

Look for the Creative AudioPCI card. It uses the great ES-1371 or ES-1373 chipset and has line level inputs and outputs. Cheap, too. In test writeups I've seen it has low noise, distortion, etc.

For a cheap interface check out the Rascal from Buck Rogers, the former packet radio column writer for 73 magazine. Cheap, simple and works good.

73,
Jim

Brian,

My suggestion is to use the mother board sound card to get started. It will certainly be "good enough" to get your feet wet, but not much more than that. However, having a second, dedicated card has both technical and practical advantages.   For instance, if you have any sound schemes selected in Windows, those sounds can get transmitted by accident, which is annoying, and technically illegal due to band usage allocations. If the board you use for ham work is not the default sound card, this doesn't happen.

You also need to change settings of the mixer board depending on what you are doing. The old line out is still there, but it usually is handled in software as a rear speaker output. So I use my mixer configured for 2 speakers normally, and for 4 when I am operating PSK31. I slide the F/B balance all the way to the back, in this case, or a little forward if I want to monitor the TX signal.

One of the better Creative boards will be fine, and I also use the
Santa Cruz board someone else recommended. N4HY, who does DSP signal
analysis professionally somewhere beyond the bleeding edge, did some
tests, and found it was the best of the consumer boards for ham
applications. At one point, there was a detailed comparison
available, but it seems to have vanished.

 http://lists.contesting.com/_rtty/2004-03/msg00348.html

They are out of production, but they turn up on eBay and other sites.
If you get one, make certain you get the WIN2K drivers off the web
site, as they were not on my setup CD.

Sometimes you get some RF into the mic audio and its almost always because its being impressed on the mic audio shield. Open the connector on the end of the mic cord and put a jumper between Pin 6 and 7. A piece of resistor lead tacked into place will do.

This brings to mic audio ground to a direct DC chassis ground and will get rid of any RF generally on the mic audio. Thats about all I can think of I have come across using the 735 mobile.

Hi folks,

I'm a long time SWL but don't know much practical stuff about Amateur Radio other than what I've learnt reading the Australian Foundation Licence Manual (which was pretty straightforward).

My semi-retired father has been interested in Amateur Radio for some time, but hesitant to take the plunge, so last year I bought him an Icom R75 receiver and big sloper antenna to whet his appetite. He has been using this set-up for a while now, and has gradually learnt how to

operate the Icom, but his grasp of radio theory, and of technology generally, is pretty poor. He passed the Australian Foundation Licence tests, but only just, and his grasp of such concepts as SSB is no more than "try pressing the button and see if it sounds any better". However, he is an eminently practical man, and will have no trouble constructing and erecting antennas etc. He has a large block of land in

a low noise country area, with a shed for a base station.

Now that he has his Foundation Licence, I'm looking at what transceiver

might be appropriate for him, and here is where I seek your
suggestions. My criteria are as follows:

- New rather than second hand
- Ease of use essential
- Knobs and single-function buttons important
- Multi-function buttons not attractive
- Computer-style hierarchical menus a no-no
- Large and easy-to-read display useful
- Portability, compact size and battery operation not important
- HF essential, 2m useful but not essential
- Computer control of no benefit
- Advanced features (eg notch filters) which require more than a button press or knob twirl of little benefit

The Icom IC-718 has a similar physical front panel layout to the R75
which he is already used to, which is a slight advantage, but I'm
open to your suggestions as to what transceivers I should be
considering.

Thanks in advance,
Carson

I think you're going to have to look at a "full-size" rig rather than a compact one if you want a dedicated button for every function. AFAIK, all the small ones intended for mobile use have multiple functions assigned to most of the buttons, often with deeply nested menus.

You could look at the ads for the current full-size rigs, narrow down your list of possibles based on features and price, then look at reviews in the magazines and on eham.net.

I have an Icom IC-706MkIIG myself now, but that's a compact with nested menus. Some of my fellow club members are Icom enthusiasts, some are Kenwood enthusiasts (esp. for the TS-2000), and I know one who has had a bunch of different Yaesu models. I've had a couple of Yaesus too, but that was a long time ago.

I know a man who smoked 3 packs of cigarettes a day and lived to be 94.
Your point?

I think the IC-718 would be a good choice. Also, you might look at the
Yaesu Ft-840.

IC-718 paired with the excellent AH-4 antenna tuner would be my choice.

best I can suggest is a used rig... easy to operate, easy to learn to use, and "HAM" bands only. Check on E-bay for a Kenwood TS-130S. Thats going to be about the best you can do, for what your looking for. For something a bit more current, maybe the TS-50S.

Having been taken by sellers on these Newsgroups a couple of times but have now learned how to do it. I would like to recommend that anyone that buys anything from an unknown seller on a Newsgroup to only pay via the United State Post Office "Cash (Collect)on Delivery". It only costs the buyer a few dollars but will for sure stop the dishonest sellers from taking advantage of an easy sell on a Newsgroup. Of course the exception to this rule is you know the person that you are buying from and know they are honest.

Thanks for reading,
Ron WA0KDS

```

This version has several improvements on interface and fixed a few problems raised by users, mainly

1. Connect TCP dialog now remembers all servers, ports and filter strings user enters,

2. Added support for auto GPS connection at startup,

3. Improved handling for station tracking and track line customization,

4. Fixed a bug in weather station data processing,

Newer APRS symbol set support is planned, once we have mappoint 2006 and know more about its API interface. Again, visit http://www.aprspoint.com for further details and download of the latest version. Thanks.

Of course one can also use the internet instead of getting your profanity from CB.
I never really heard that must profanity on CB, but definately internet.

Title says it all. I'm using the transmitter section in a UHF repeater and
need the schematic, board layout, and parts list to get it tuned
down into the ham bands. Apparently there are two versions. Mine
uses the trippler output stage.

Xref: g2news2.google.com rec.radio.amateur.equipment:3652

I purchased and built an Elecraft XG-2 tri-band signal generator to go with my K2 and my TS-850SAT. The manual for the XG-2 gives (roughly) this procedure for MDS testing:

1) Turn off your AGC
2) Select CW mode with a narrow filter, if you have one.
3) Crank the AF/RF gain up to full
4) Setup a VRMS DVM hooked to your ext. speaker jack

Measure the background noise on the DVM then hook up the XG2, set to the proper band and set to 1 microvolt (-107dbm) and re measure the voltage on the DVM. The first reading is N and the 2nd reading is S+N. Do the following math:

Divide Signal (Vrms) "XG2 on" by rec noise floor (XG2 "off") = R
(Log(R))(20)+107=MDS

With this procedure on 40m my K2 scored -136.3dbm but my TS-850SAT scored -137.2dbm. Puzzled by the results, I Googled and found those were typical numbers, although the Kenwood seemed a bit on the hot side.

OK - Here's where it get's interesting - today I bought a Telonic Berkeley rotary step attenuator, model 8107s. Now this device can add 0-59db in 1 db steps. The manufacturer claims 0.2db accuracy and 0.4db insertion loss up to 2ghz (worst case). To hook up to the XG-2 I needed a BNC male/male adapter and a BNC female/SMA male adapter. To hook up to the radios I used a SMA male/SO-239 adapter, 7' of RG-8x coax feedine into a MFJ 815c swr bridge then through 2 coax jumpers (2' ea) with a SO-239 barrel connecting them. Yes, I know - not an ideal low loss connection for MDS testing. I'll try that later....

Anyways, I figure I've got 3db of losses (40m) through all those connections/meter/coaxes. The XG-2 is supposed to be VERY accurate as far as output levels go. Never the less I'm fudging the numbers based on W3AB's recent tests of a XG-2 on an HP 8562A spectrum analyzer which showed a real world output of -106dbm +/- 0.5db.

Let's add it all up: -106dbm - 0.4db - 3db = -110dbm.

If that is accurate, I figured I'd be able to crank in 26db of attenuation before I reached -136dbm and lost the signals (I'm not measuring now - I'm listening with headphones for the tone).

I went to 26db and the tone was EASY to hear! I eventually found that I had to crank in **46 db** of attenuation before I lost the signal!

That's -156dbm for MDS, guys..... So what did I do wrong?

This is a complete AT 1-6 Tuned input board and switch from the Amp Supply
LK series

Amplifiers. This will fit into the Dentrons also. Have schematics for this.

If you have a Stock Amp Supply or Dentron amp this is what you need.

hi all
i am looking for the shematic of my old transceiver here
an old HW-12 hf,
anybody,,,is there a copy somewhere???

it is rare as gold,
or best
a copy of the manual,it would help me to set it up shape

thanks
gervais,ve2ckn

Go here and scrool down to the list.  Click on the one you want.  It may
take a try or two to get it.  I got a page not found the first two times.

I have gotten a few manuals from http://www.w7fg.com/index.html

http://www.w7fg.com/search.php?find=hw+12 is for the hw 12

I think the ones I got were reporoductions, but excellent detail as good as new

Good luck

I just came into possession of several thousand brand new Motorola brand
PN2222A transistors in the TO-92 package.  So I have them 100 for $7.00
including shipping in the USA.  These are new (old stock), unused parts,
still
on the paper tape they were born with.  The part is clearly labeled and is
genuine
Motorola goods.

Order Item:  PN2222 - Motorola

Send your order payable to:

Brian Murrey
47 Grassy Drive
New Whiteland IN 46184

or

Paypal to orders@hamradparts.com

What about the buyer that refuses the package or postman cannot deliver
it ,or buyer decides that he doesn`t want it ..Seller is stuck with 2
times the shipping to get it back..OR seller sends you a box of rocks
COD ..Buyer pays post office gets nothing but rocks..I agree about
checking out the seller ,making sure that he is reputable ,That always
seems to work out good for me.. W4PQW

Yes, checking out the seller's reputation is always a good thing to do. I tend to be somewhat more suspicious of potential buyers (or sellers) who have "fluid" addresses - PO boxes, PMBs, "Suite" numbers at locations which turn out to be Mailbox Etc. or similar storefronts.

There are a couple of other approaches which I've found worthwhile:

[1] Use an escrow-payment service - a trusted and reputable third-party which receives and holds the money from the buyer, and releases it to the seller only when the buyer has received and inspected and OK'ed the goods (or has received the goods and failed to either OK or reject them within a given amount of time).

[2] Payment-by-halves / risk sharing. Buyer sends half of the funds, seller sends the goods, buyer inspects them and then sends the remaining half of the funds.

It can also help to make it clear that you *will* file mail-fraud charges against anyone who ships you a box of gravel.

Greetings all.

I am looking for a TenTec Corsair II HF transceiver in good operational and cosmetic condition. If anyone is looking to sell, let me know.

hi sorry to hear about your troubles i guess it's a ft-480r?

it might be a bad relay or switchin the mike, even a bad mike cord try
pressing the call button does it still happen?   then it's not the mike
or mike cable   rulling out the simple stuff first

i am an original owner and my relays are still fast,   it's way off
freq now so i have to send my in for repairs its prob pll or needs
recalabration

shoot some relay cleaner in   them and see what hapens

if its not a relay   then since it only keys on warmup you might have a
part bad or smthing

good luck   sorry i can't offer better advice

it'sa great rig

I think both have there place. I use a mobile HF rig in my truck but I also have a CB as well. The HF serves one purpose as far as ham radio is concerned but when I want an update on road conditions the CB is the only option.

Study for your ham license because it is a great hobby but that doesn't mean you have to give up the CB.

My 2 cents worth!
73's (or 10-4 as the case may be)

Any suggestions for a dual-band (144 and 440) amplifier that takes 5
watts in and gives me a reasonable output (say, 25 watts or more)?

The Mirage BD-35 is the only dual band amp I can find but it's
non-linear so it's good for FM only.

Thanks...

I gave up on CB radios years ago, when I started servicing commercial two way radios. I preferred the 1749 foot tower with the 5 MW EIRP signal coming from the UHF TV station I engineered at. I just wish I had the time to ride the elevator to the 1200 foot level to watch a launch from the cape when the shuttles were being launched, instead of being at another transmitter site every time. :(

I may get the code free ticket, if I get to feel well enough to go take the test. I didn't even make the local hamfest this year. :(

   Unlike most of the remote head radios,  the TM-G707 control head fits
into a "cavity" in the front planel of the main radio body, so its width
is considerably smaller than the main body.  Reason I bought it go begin
with was the same reason as the original poster...  I had a very tight
car  (BMW 3 series) and I wanted minimum impact physically in a rather
tight console area.... I managed to make a custome bracket and did a
beautiful no-holes installation I was really proud of.

    Currently, that same radio control head is now mounted inside the ash
tray cavity of my wife's new Toyota Highlander.

I assume you saw my reply to the "which WX radio" thread.

Any of the new ht's will have extended receive.  Some even have
receivers that go all the way down to the broadcast band.

Romain Salad wrote:
> What is your advice.

The best site I found for reviews is (by far) http://www.eham.net/.
Lot's of good quality reviews... A while ago I ended up getting a
Kenwood TH-F6 tri-bander based on the reviews. A little expensive, but
it seems like a good radio, but I really can't compare. It has a load
of features, that's for sure. I thought it would be good to have some
sort of alternate commmunication if there is an earthquake or some
other sort of disaster.

I tried a CB first, but there is *no one* using CB around here. I
thought there would be at least a few truckers or something.

I don't have a license or anything, so I've just used it to listen. I
should get a license and join up with one of the emergency
communications clubs or something, but never seem to get around to it.

Depending on your plans, you might want to get a scanner, instead.

The IC-435 is an old UHF transceiver. Why would you think there would
be problems with a unit designed for mobile operation?

IC W32A, it contains enough memory to add all the 2 meter repeaters
and common simplex frequencies, and can monitor all the weather radio
stations, and, as a bonus, operates on 70 cm as well.

Don't forget to have a copy of your amateur radio license...
Buck

Sorry, I gave the incorrect model number for the HF rig. I originally said 435 when in fact it is a IC-735. I am reposting with the correct model number.

I am thinking about using my Icom IC-735 HF rig in my truck during a trip to CA. Has anyone out there used a 735 mobile before and had any specific problems?

Any help is appreciated
73's
Chuck

I found it interesting that just before Hurricane Katrina (well, two days before), the Radio Shack's, in New Orleans still had lots of stock of Grundig crank radios left. Now, I know there are more essential things, but when you're sitting in a shelter for four weeks, that Weather band/AM/FM/TV-audio/Cell phone charger/LED flashlight radio might come in handy.

It sounds more like the PLL, but it's a long long time since I looked in
the guts of my 480 or 780. I think I have the actual service manual for
it at home somewhere so I'll try and hunt it down tonight.

Used my IC735 for 15 years as both house and Mobile .. loved it.

Never had a problem. Just moved to MKIIG is only reason

I've never had my 735 mobile, but I imagine it'd be best to have a
small lamp aimed at the tiny sliders & buttons in and around the
plastic hinge :-)

And if you have the original mike, you can use it to fine-tune the
frequency.

FS As New hy-gain Ham IV Rotator and Control box. This Ham IV has been used less than one year and is in great condition. I just check it out and all functions work as they should. It has been in storage for several years. It comes with a manual. Price is $285 plus shipping. Thanks, Charlie Hugg, K5MBX

I have a like new condition Mosley Classic 33 HF Beam for sale. It the late
model CL-33-M and currently sells for $650 from Mosley. It has great gain on
20, 15, and 10 meters. It has a 18 foot boom.This one
was up for a little over a year and looks brand new. It has been taken down
and is partially disassembled. It would be very easy to put it back together
again since all pieces are color coded. It also would fit into a
pickup truck for transportation. Original Manual included. The price is $285
picked up or I can deliever it
to the Belton Texas Hamfest. Or I can meet someone within 100 miles of
Abilene, Texas.
I don't want to ship it.Thanks, Charlie Hugg, K5MBX

Standard CSA-181A   Rapid Charger - desktop charger. Charges in 1 to 2 hrs, w/Automatic switching to safe trickle charge mode. This charger can be used with several batteries. I used it with my Standard C-168A HT Batteries. It has the Type 2 Insert for those type batteries. Other Inserts can be used so that it can charge other Standard battery packs. But this charger includes only the one Insert. Price is $30 plus shipping. Thanks, Charlie Hugg, K5MBX

I have for sale a CDE AR22 light duty rotator. The Rotator looks near new
and works, but needs top clamps. The Contro Box needs some work. It will not
click through the
postions.It turns the rotator if you manually move the control knob.It looks
good and I see no signs of
damage. I do not have the manual. Price is $45 plus shipping. Thanks,
Charlie Hugg, K5MBX

CB is the only way to communicate with others on the road with
any consistancy. Until truckers and others use another method,
giving out warnings and trying to communicate with someone
next to you driving down the road, CB will dominate. Saved
my ass once when a trucker warned of a bad road condition.

Aha, that makes more sense.

No personal experience here, but I don't see any significant concerns about mobile use performance or reliability in the reviews.

Back in '85 or so I considered buying a little Radio Shack CB HT because
my highway time in travel had gone up so much, but after hearing channel
19 there in the store, I changed my mind. I never heard such filthy
language even when I was in the service. I'm no prude for sure good

buddy, but while the truckers and whoever were cussing, all I could
think of was all the kids that must have had to hear that kind of
language because their dad or motherwere enjoying reading the mail.

I'm having a PC (Win 2k) put together which will be my dedicated ham station box for running contest and general purpose loggers, 2M packet spots and the sound card based digital modes like PSK-31, MFSK and RTTY. I have zero hands-on experience with any of these at this point so I'm looking for advice from those of you who have been there and done it.

The computer will have some relatively inexpensive "plenty fast enough" Athalon chip motherboard or another and a gig of RAM. My understanding is that the "sound cards" integrated into motherboards sometimes don't do very well when it comes to running PSK-31 et al. While cost matters I'm not at all adverse to buying a decent third party sound card like one of the Creative Labs boards. My question is given your expereince which audio board or boards would you recommend if you were in my shoes?

Thanks ~ Brian Kelly w3rv

Hi Folks:

Need your input on this. I've almost convinced myself to buy a new Subaru Outback and want to use my FT-897 in it. As of yet, I have not made a choice of antenna system and a search on the net has come up with very little info.

Are you aware of any RFI issues with this car? Do you have any installation tips, or websites with suggestions as to best mobile installation practices?

As this is my first new car ever, the work will be done by professional 2 way radio installers, as I want this to look very good and my work generally looks like it was done with stone-age man's tools .. LOL

Thanks for taking the time help out.

If I was going to set up a Pc that way, I would use any of the Creative Labs Sound Blaster Live series. Any of the Live series will work. My all time favorite card is the older Awe 64 Gold, with it's phono line out jacks. You can get the Live series "5.1 Digital/ect" for next to nothing, they also made some OEM for DELL I believe that are just as good....

Sure you are (a prude) OM but its nothing to be ashamed of. Cursing is a sign of poor vocabulary. OTOH, I was brought up on "Sticks and stones my break my bones but words can never hurt me!" so I find the PC notion that "bad words" can somehow hurt anybody, including kids, a bit amusing.

I will diaagre or if you add to your remark simple using of the "foul"
word is not the sign of poor vocab but rather only having them at your
disposal, the problem with such language is that it is only used so
badly most

but current morals are starngely inconsisant on most everything

You may be ok with MB sound. Im using the sound off my P4PE/L MB and after
I did the
calibration Ive 0 problems with it.   If you definitly want on board you can
find the Santa Cruz
fairly inexpensive and add it your self.

But I would say try the MB Sound first.

Scotty W7PSK.

So you think its OK to teach kids filthy language? Should Sesame Street
start talking like Stern?

As for the "sticks and stones"....rubbish. In some locations when you
start directing expletives at a person, it can be considered a "Breach
of Peace" or possibly even Disorderly Conduct.

ARRL threw principle out the window when they caved in to the demands of
the Lambda Amateur Radio Club (LARC).  It was a sad day for me indeed when
I opened my beloved QST magazine and there on the pages were photos of
queers on a Tropical DXpedition, and in living color no less.  The ARRL
wanted us to embrace a sick perverted lifestyle and be one big happy
family.  To me, it was the spark that signaled the death of a once proud
organization, and it turned liberal.

Now the queers have all but taken over, they're like the military wing of
the Democratic party, and always in your face. It's not even safe to take
your kids to Easter egg hunts anymore. I know you're all going to disagree
with me, but a man touching and sucking on another man's cock and fucking
his ass just ain't right.  The ARRL promoted this, now look what happened
to our radio groups.

Well, your refusing to properly identify yourself with a real name, ISP account, and Radio License casts doubt on the credibility of your post.

I did not know that the Democratic Party had a 'MILITARY WING'. Who is the commanding officer? What is the source of that officer's legal commission? [PS: I am Republican]

Finally, your prejudices are showing!!!

Which issue of QST was that?  Wanna bet that N8WWM was in that
DXpedition picture?

"Skirt Chaser": Monicker like that, and message above, suggests you are
overcompensating for your own latent tendencies. Or perhaps you've been
to close to your antenna while transmitting with a California Kilowatt.

"Our radio groups": What's your call, OM?

"Military wing of the Democratic party": You mean Hillary or who?

Phil, W7OX

When I was a young lad, my parents taught me that there are a couple of
things you *DON"T* do in public....
First and formost, is not to say or do anything that you wouldn't want
repeated in your church sanctuary on Sunday morning.
Second is to treat *everybody* else the same way you want to be treated.
Third is don't put yourself in a position where somebody has to do something
about it.
All pretty good rules to live by, and they all are equally applicable to
amateur radio, or *ANY* radio.

Just my thoughts

North and south freeways in So Cal use Chan 15, east and west use Chan
17 or 19 for CB

North of Burbank..its 15 to hiway 46..changes to 17

Hiway 14 to Palmdale Lancaster..the commuters use 12

I use mine just about every day in your AO

Gunner

"Pax Americana is a philosophy. Hardly an empire.
Making sure other people play nice and dont kill each other (and us)
off in job lots is hardly empire building, particularly when you give
them self determination under "play nice" rules.

Think of it as having your older brother knock the shit out of you
for torturing the cat." Gunner

I have a couple of cheapies out of Radio Shack, and my marine band hand
held. Forgot the brand at the moment.

Too bad that Tecsun (Grundig) won't put a weather band on one of their crank radios. I'd think that if you live in a place where you need split second weather warnings (like Tornado Alley) that a dedicated weather radio would be better. I have a Midland WR-100 that can supposedly run on batteries, but I'd think that it would eat them quite vigorously. I rarely use it anyway, because California just doesn't have the kind of nasty weather that requires anything more than the nightly TV news weather report. California has earthquakes and floods and fires, but since those aren't directly weather related a weather radio does little to help. I keep a cheap Rat Shack AM/FM portable by my bed for most stuff, and a Degen 1102 ready to evacuate with if I have to. Most of the hurricane evacuees didn't have portable radios at the ready, and that caused a lot of frustration. If you're evacuated and stuck in a HS gym or community center with a lot of other people, having a working portable radio could make you the one eyed man in the land of the blind.

Huimmm..I was browsing through my Secret Stash of Stuff..and found an
old but minty Bendix radio..has AM, IRRC FM, and Marine band, with the
direction finding loop on the top. A commercial piece, elderly of
course, but it works just hunky dory.

Anyone got any interest in it? Trade for?

Gunner

Being stuck there will also make you helpless, disarmed and at the
tender mercies of the ...barummm..Authorities...barummm

Not necessarily a good thing.

     Well, I got a Cougar bland one of those.  Still with the instruction
booklet - which is all in Japanese.

     Hmmm, now what I need to do is find me a Horizontal Japanese dictionary
& language tutor.

cheers
pyotr

I'm asking because the OP said they wanted a 2m HT with extended receive, and in order to help him/her I wanted to know what they meant by "extended receive". There is a significant difference between a receiver that covers 144-174 Mhz (NB FM only) and one that covers from the AM broadcast band to 1.2Ghz.

However, since the OP apparently treats Usenet as a write-only medium I guess we won't be able to help them.

Yes and no. SWMBO and I have worked any number of emergency nets. Normally, participants ID and are called by call sign so, in those cases, yes. OTOH we would certainly respond to anyone in a true emergency where there was a valid threat to life or even property.

Yaesu FT-90 is the smallest I've seen. Ours has had some issue with cold but otherwise OK.

Good for you! A lot of hams and people who knew CW were needed in a hurry, and the military knew that they had to get them where they were needed as soon as possible, so they bypassed basic training and AIT wherever possible.

I always enjoy hearing from other Veterans who served in the signal corps or AFRTS/AFRN. Thank you for your service to our country.

One evening the DJ announced that the request line was open, and that he would play any record in the library. When he refused to play my request, I turned the AM BCB transmitter off. ;-)

> Enlisted men are extremely sly and cunning, and bear considerable
> watching.
> -Army Officers Manual 1836

Some officers were even worse than the enlisted. Two lieutenants at Ft. Greely drew their M-16s from the Armory, signed a tactically equipped jeep out of the motor pool and went rabbit hunting in "Buffalo Drop Zone" which was a restricted area. One of them shot at a rabbit but he hit the rock it was sitting on. The bullet ricocheted into the Jeep, setting it on fire, and starting a full blown forest fire. I had to go fight the fire, and as we were finishing I saw the two officers sitting back to back in the bed of a pickup truck, surrounded by CID. One of them was warning them not to move, because they would love to shoot them for trying to escape. The last i heard, they were sentenced to 20 years at Leavenworth.

Yeah, very few officers had ANY sense of humor. On the other hand, some knew when to leave well enough alone. I only stood Monday morning formation a couple times the whole year that i was in Alaska, and my C.O. would apologize if he woke me up during Monday morning inspections, then back quietly out of my room. ;-)

Not worth the ammunition. Maybe use him for a door stop? ;-)

I have a Uniden BC 796 with all in the box , still has plastic over
face. Might take a trade on something , must be close to a 246T or
similiar and some cash.

I wonder if mine's defective, then. Or maybe it's not set up correctly.
I really should read the instructions...

I've tried channels 1--40, and *rarely* hear anything. I heard one
conversation, once, several months ago. Last weekend I was in Exiter,
by Bakersfield, and got nothing, again. 1--40 were all dead as far as I
could tell.

The simple solution is to find an old scanner that is not blocked on
cell phone frequencies.  Then you can either watch the signal strength
meter, or feed the meter signal into an audio-frequenct VCO.

Regards,
Ed

Since the range on CB, without hanging a lot of metal in the sky, is
only a few miles, what's going on even in the next town may not have
anything to do with where you are.

On the east coast, I can drive hundreds of miles on I-95 (the
equivalent of I-5 here) and hear nothing on CB unless the traffic jams
up. Then they come out of the woodwork.

I measured my Yaesu FT90R's control head. It is 1-1/8 inches X 4 inches.
I don't think it is still available.

Now available: Program COAX_VLF

The behaviour of transmission lines at the lower frequencies is more complex than it is at HF and above. The effects set in sooner at higher frequencies on low impedance coaxial transmission lines. They are affected more at higher frequencies than other types of line.

As frequency is reduced below several hundred KHz the impedance Zo increases, its impedance angle becomes more negative, and the propagation velocity decreases. Unusual things happen such as reflection coefficients being greater than unity and the SWR being greater at the input end of a line than it is at the load end.

At power and audio frequencies Zo can be an order of magnitude greater than the nominal HF value, and the angle of Zo aproaches -45 degrees.

It is useful to be aware of the magnitude of such effects. With coax they can be experienced in small ways at frequencies as high as 2 MHz or more.

Download program COAX_VLF in a few seconds from website below and run immediately. Filesize = 48 Kilo-bytes. It is both practical and educational. Try to fathom out how reflection coefficients greater than unity can arise.

Thanks. Didn't see his/her post in rec.radio.amateur.equpment on Easynews, my local ISP's server, or Google. I did find a response in misc.survivalism, a group to which I do not subscribe. Subsequently I've quit crossposting to groups to which I don't subscribe - which I should have done a while ago as a matter of netiquette.

I'd like that. Now that I think about it more, the weather channels all
work fine, it's just that I very rarely pick up any conversations on
chanels 1--40. So I'm assuming it receives fine. It would be good to
try it out with another CB and see if I can pick them from the same
room.

YAESU VX7R VX-7R TRIPLE BAND NICE! Many Extra's No Res!

http://cgi.ebay.com/ws/eBayISAPI.dll?ViewItem&item=3D9712306609&rd=3D1&sspa=
gename=3DSTRK%3AMESE%3AIT&rd=3D1

YAESU VX7R VX-7R TRIPLE BAND NICE! Many Extra's (No Reserve!)

Up for auction is a very nice Yeasu VX-7R with many extras . What you see in the photos are what you will receive. I have just have not had the chance to use it. Everything works great! Good luck!

THE WORLD'S FIRST SUBMERSIBLE AMATEUR HAND-HELD

Protected against water ingress by a wide array of rubber gaskets and other weatherproofing techniques, the VX-7R is rated for 30 minutes of submersion at a depth of 3 feet (JIS-7), plus a tough magnesium body with rubber bumper pads, making it ideal for outdoor use. Plus you get Dual Receive, 50/144/430 MHz operation plus wide-band receive coverage, a full color status indicator Strobe, and an "Internet" key for quick access to the exciting new WIRES=99 repeater-internet linking system.

Unmatched Weatherproofing

The VX-7R case, keypad, speaker, and connectorts are carefully sealed to protect the internal circuitry against water damage. And the optional CMP460A Speaker/Microphone, like the transceiver itself, is rated for 30 minutes of submersion at a depth of up to three feet. The VX-7R is available in both Silver (VX-7R) and Black (VX-7RB) versions.

50/144/430 MHz: 5 Watts of Power

Utilizing a reliable FET power amplifier circuit, the VX-7R provides a full 5 Watts of power output on the 50, 144, and 430 MHz Amateur bands, with bonus coverage of the 222 MHz band at 300 mW (USA version only). And for 6-meter AM enthusiasts, you also get 1 Watt of carrier power on the 50 MHz band. Four power levels may be selected, each offering its own degree of battery conservation.

Dual Receive

The VX-7R is capable of four modes of Dual Receive, including simultaneous reception of (1) two VHF frequencies; (2) two UHF frequencies; one VHF and one UHF frequency; or one "general coverage" frequency and one "Ham" frequency. And you can set up the VX-7R to reduce the audio level on the "Sub" band, if you like, when a call is received on the "Main" band.

The Most Memories Ever

Sporting the most memory capability of any Amateur transceiver, the VX-7R includes over 900 memory channels, yet access is simple and intuitive, thanks to the 8-character labeling capability. These memories include 450 "regular" memories, 10 "One-Touch" memories, 40 programmable band-edge-limit memories 12 "Home" channels, 10 Weather Band memories, 89 Shortwave Broadcast preset memories, 280 Marine channels, and 10 "Hyper" memories that store complete transceiver configuration data.

The Most Dazzling Display Ever

More Info:

VX-7R.pdf (500.90 KB)
Amateur Radio \ Manuals \ VHF/UHF Handhelds

VX-7R Spanish Manual (3.29 MB)
vx_7r manual.pdf (2.30 MB)

EXTRAS:

* Yeasu CSC-88 Soft Case
* Yeasu 12V Cigarette Lighter w/ noise filter
* Extra 2 meter / 440 antenna
* Extra belt clip
* MFJ-295 Microphone
* Laminated Quick Reference Guide, a little bent.

? My Ft 480 has developed a odd fault ..

when first turned on from cold rx works fine, but set will not go to tx
when mic pressed-in all modes- (or cw key) wait about 30 seconds with
mic/key pressed - then it go's to  tx and works fine

from cold, there is no click  from the t/r relay .. once it had wored ,
keeps running fine .. any one seen this before ? ... i assume its may
be a relay .. but that dont explain why there is no responce at turn on
?

Tnx

G ..

Have you tried doing a microprocessor reset?? The one in my truck started
doing all kinds of weird stuff after a severe lightening storm... did the
partial reset, and all was right with the world again.

It sounds like an auto tuner having a hard time getting a match.

30 seconds is an awfully long time though.

APRSPoint is the latest APRS implementation that integrates seamlessly
with mappoint to allow you to track anyone on a street level detailed
map. It handles imput from RF and internet feeds, and works with
Kenwood radios with built-in TNC's in an easy to use interface. It is
considered to be the most stable and intuitive, and ideal for first
time users. We are offerring a special discount right now. Please visit
http://www.aprspoint.com for details. Thanks.

I think you should put the Childrens Band on the back shelf, and get
licensed to play with the grown-ups.

Just what does menu function 05 (Sub-main rcvr Cross on/off) really do?
  I have been trying to track down an easy way to use the sub receiver
signal as a really effective noise blanker. Am I on the right track?

I don't think it's that simple. CB isn't exactly the place to discuss Master's theses, but I suppose it has a place.

but ... if you're serious about learning about radio, including some very basic circuit theory and radio operations protocol, ham radio can be rewarding on a scale not imagined around 27MHZ.

Don't replace that CB. Get a shortwave radio that picks up ham radio and listen for a while. Google "ARRL" and find out if it seems like its for you.

GEE, do you think I just got fished in?

so be it.

John

I was a mechanical engineer... we got to play with things that had moving
parts :-)
Someday I will have to write a book about all of the things we did....and
even some of the stuff we *didn't* get caught doing. LOL

Enlisted men are extremely sly and cunning, and bear considerable watching.

Well I finally got thru to a Supervisor at MOUSER and told them
I had been promised a catalog a year ago and the noone in Hawaii
had every heard about MOUSER and why did they promise me one and
then never send it.   They profuxely appologized to me and
said I would be sent one right away and it weighed x lbs
(I forgot how many lbs). I also told them I dont want any catalogging
done via email.
                   Joe

I tried to get them to do it, but they have given up.

> I was a mechanical engineer... we got to play with things that had moving parts :-)

I tested out of three years at Ft. Monmoth New Jersey's electronics school and was awarded my MOS as a civilian acquired skill while I was in basic training at Ft. Knox, Kentucky. That was the main reason I didn't re-enlist. I caught a lot of flak from people who didn't like that I was only in the service a couple months before I was doing the same work they were, without going to the military school. They got really pissed that I could take a quick look at defective equipment and fix it before they could dig out the manuals and their notebooks. I even repaired RADAR equipment for a couple weeks while they were short handed. The RADAR techs were highly pissed when I told them that I had read the manuals for a WWII surplus aircraft RADAR system while I was in high school, and that it wasn't that different from a TV set. Anyone remember the 15E RF tube and the 15R rectifier? Electronics has always been easy to me.

> Someday I will have to write a book about all of the things we did....and
> even some of the stuff we *didn't* get caught doing. LOL

The engineers at Ft Greely insisted that we didn't need any air conditioning at the TV station, then claimed that we didn't have enough power for the 208/240 single phase through the wall AC we had bought out of our budget. It was six feet from a 100 amp three phase breaker box that was used to power the control room and transmitters. I popped off the cover to find that some genius had only used one phase, leaving me 100 amps at 208 VAC available to run a 30 amp unit. They still refused to hook it up, so I called one of the enlisted men who worked in that section. He rummaged around a few abandoned buildings and brought me what I needed to hook it up myself. We cooled the TV studio by opening the back door in the winter time. the -40 degree air did a nice job cooling the set, till a bear tried to get in one night. :(

> Enlisted men are extremely sly and cunning, and bear considerable watching.
> -Army Officers Manual 1836

I worked in the "Weathervision" section at Ft Rucker Alabama, which included CATV, Educational TV, CARS Microwave and other assorted equipment. Our mission was to provide weather data to the control towers, flight ready rooms and classrooms where they taught the helicopter pilots to fly. We also maintained the entertainment CATV systems on the base, in parts of the on base housing areas. Some idiot cut the cable feeding our day room and pulled it to his room in the barracks. I reported it to the civilian contractor, but three days later it was still out, so I borrowed one of our bucket trucks from my section and repaired it at lunch time. I was just finishing up when the guy showed up. He was rather upset, till he found out that i had not only repaired it, but I moved the drop to where the moron couldn't reach it where it ran from the pole to the roof of the three story brick building. Then he told me that he was the only tech that serviced the base, and that I could put a drop into my one man room on the second floor, as long as I hid it for inspections. He offered me the supplies, but I had enough used stuff in the truck to do the job. The following Monday afternoon I got back from my duty section to find that the wire had been pulled loose from the hook outside my window, and run into the CQ room of the other company. I told them that it was MY drop that they had stolen. I received an obscene gesture and a threat, so i smiled and left. A couple hours later when they turned their TV on, I got a really good grip on the wire from my second floor window and pulled, really hard. I heard a loud crash, and a lot of cursing. Then they were pounding on my door, demanding that I give it back, and pay to replace their TV. It never happened, and I had cable TV till the day I left for Alaska. ;-)

Thank you, and you as well. My mission to help local disabled Veterans is to repair and give away used computers to those who want, but can't afford a computer a used system that will let them do email and browse the web. The VA recently upgraded the computers that handle prescriptions, and those of us under the VA's care can refill their prescriptions online. http://www.myhealthevet.va.gov/

Speaking along those lines, I was an RO at a WW1 CCC camp in Fla when I got a msg from Sig Corps at WUO Ft Benning asking me to come up and sign up with them and they would put me to work right away. No basic training, or boot camp.   I grabbed it as I knew I could handle the CW up to around 40WPM at the CCC's. Only problem was I got paid $8 a month and $22 a month went direct to my Mom.   After started at WD Radio in Benning even as a PFC I was drawing down about $80 a month in 1940. Reason WUO handled not only the S.C. WD Radio traffic, but also handled all the Western Union and Postal Telegrph stuff accross the counter so both W.U. and Postal Tel paid us a commision on top of our Military Pay.   Never went to any S.C. School until about 1944 as we rotated back to the USA on our 85 points system of overseas duty. They did'nt know what to do with all the 5 and 6 stripe NCO's that were being thrown back to USA, So they sent us to Camp Crowder S.C. school and taught us how to be technicians on wide band FM which was just coming into existance.

Exited at Drew Field in FLA. just after VJ Day
Joe/KH6JF/ABM6JF/KP4EX/W4FAG/W9ZUU

When I was stationed on west coast WHECs, I tapped into the ships cable
system so I had cable at my rack, and had a little 4 inch TV and little
stereo tucked up in a trap door I cut in the the false overhead over my
rack... it worked great :-)
On the same ship, we had 12 engineers that were licensed HAMs and the CO cot
a bit miffed when he found out that the engineers could copy CW better than
his radiomen could... it was pretty funny. LOL

Hi

I am looking for a high resolution schematic and block diagram - the only ones I have found are unreadable when printed or zoomed in (in PDF format).

TIA
Chris Mayhew

I doubt that there is one "favored" model, but here's my $.02:

I keep a Midland SAME weather radio (model WR-300) at home. For travel, handheld scanners that cover police/EMS freqs as well as NOAA wather channels are useful if you're so inclined. Also several amateur radio handhelds (can only be used for transmitting if you're a licensed radio amateur) cover NOAA weather channels. FRS/GMRS walkie-talkies sometimes include weather channels as well.

BTW, if you're not already a license amateur radio operator (ham), consider getting your license. The Technician class (no Morse code knowledge required) can be obtained by successfully passing a written 35 question exam, and allows local communications via simples or using repeaters for more coverage. A very useful tool for survival situations when the grid goes down, and a fun hobby, too.

They don't work where I live. And over in VA (Harrisonburg to be exact), they only work in spotty locations. IMO, a complete waste of money if you live anywhere in the mountains.

Most scanners made in the past 30 years will receive the NWS broadcasts, and the newer ones will alert on SAME broadcasts. I use my BCD396T if necessary.

I have an Oregon Scientific WR196T (no longer made). Nice radio if you don't need to use it on batteries; it would use less power if it had vacuum tubes.

If possible, find one that will let you select not only by warning area but also by warning type. I shut mine off permanently when I was awakened twice in the early hours by a WATCH that was never alerted when it first came out and I was awake. Nowadays you'd also have to shut out the "amber alerts".

My main weather radios are:

1. Yaesu VX5R handheld transceiver (a basic amateur radio license required if you're going to use it to talk as well as listen); and
2. Radio Shack Pro-95 scanner. This has an alert function that sounds an alarm if a weather emergency is spotted in my area.

Jackie

I have an Eton FR300.

xxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxx

All-in-one self-powered radio

eton FR300
AM/FM Radio with NOAA, TV-VHF, Flashlight and Cell-Phone Charger

This all-in-one unit offers functionality and versatility that makes it ideal for emergencies. The FR300 provides you with radio, light, and cell phone battery life when you need it most. The Hand-Crank Power Generator charges the internal rechargeable Ni-MH battery pack. With the NOAA weather channels and TV-VHF channels, you can find weather forecasts or listen to TV shows when you're away from the set. Available in: Orange, Red, Black, Blue, Silver

xxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxx

I kind of like it.

Guy

You need an ''All Hazards'' radio to really be covered.  Old style 1
kHz tone radios are obsolete.

Any idea if the FR200 radio from Grundig receives NOAA weather
channels?

If so, does it do it well?

One of the Grundig or Kaito hand crank AM/FM/Shortwave radios.  I've
found the local all news station to be far more up to date on
forecasted weather and at least equal to radio originated tornado
warnings.  And the voice over radio is far more pleasant than the
annoying mechanical voice of the NWS broadcast.

That's why you get a state of the art NWR radio.  It makes no sound
unless there's trounble.

It depends on where I am at the time.... both of my trucks have HF and dual band (VHF/UHF) HAM radios, as does the house. They all work, and there is usually at least one on almost all the time. If the sky looks nasty and/or there is threatening weather forcasted(I check the Weather Channel at least twice daily), I run the dual banders on scan with the local repeaters programmed in, and turn the HF to either the 40m or 75m severe weather net frequencies.

most of the weather radio specs say something like they only guarantee the
digital SAME code to be accurately decoded 90 percent of the time.
With that in mind i would use a non SAME weather alert radio as my fall back
survival radio. The one that alarms on anything.

And the voice over radio is far more pleasant than the annoying mechanical voice of the NWS broadcast. "

I have found that the NWS broadcasts are MUCH more detailed with the information I need.

Most news stations have LOTS of talk and LITTLE information in my experience....when I turn my radio on in an emergency situation I want to hear information NOW to conserve power and time.

TMT

It's long been the rule that during a life-or-death emergency that any person can use any frequency, any mode of transmission on any radio. Transmitting for anything less than a life-or-death emergency is not legal.

```

Looking for advice to find the smallest dual-band mobile rig with remote head capabiltiy. The size of the transceiver is unimportant; the size of the remote head is what it's all about.

I traded my SUV for a VW Passat and there's not a lot of room to mount anything! I've already swapped out the standard 2X-DIN radio for a single DIN and installed a scanner in the other half of the 2X-DIN space, so that's gone. I have my GPS and Blackberry holder mounted on ProClip mounts, so I'm really getting tight.

I'd really like to find the smallest possible remote head mobile rig as I'm not fond of HTs in a mobile environment.

Any help would be appreciated.

Tnx & 73,
Jack - WA2OLZ

I can't certify that its the smallest, but the Kenwood TM-G707A has a pretty darned small control head.... and is fairly inexpensive for a dual band rig, to boot. I like it so much I now have three of them.

I concur. 5 1/2 x 1 9/16 is the approximate W x H of the control head.

I think most of them do 137-174ish Mhz.
The icom T2H sport is reasonable, works very well, & has ext Rx.

When I think of extended receive I think of a radio I can use to listen
to AM on the aircraft bands at a minimum. For others it might mean the
ability to listen to FM broadcasting or SSB on 20meters (a la the
Kenwood TH-F6A and others).

The original poster was looking for the smallest control head. Near as
I can tell from the specs, the TM-G707A's head is considerably smaller
than the FT-7800R's.

It's a quad bander, but indeed the control head size is almost identical
to the TM-G707A.

Oops - sorry, I thought you said FT-8900R... my error.

In any case, the FT-7800R's control head is also about the same size (5
1/2 x 1 9/16).

While a bit taller, the TM-G707A control head is only 4.0" wide.

Ed

Hello All
I have a Motorola HT1000 VHF high band 16 channel two way handheld
radio in good working order. comes with battery, charger, speaker/mic,
and leather belt swivel case. I would like to TRADE it for a digital
TRUNKING SCANNER. I also have a FDNY style leather radio strap for the
case that is negotiable. If you are interested please contact me at
prosped@aol.com

THANKS!

Averatec 5400 AMD 1.6 2800+ 512 DVD Burner Win XP Laptop
It has a AMD 2800+ processor 1.6Ghz, 40gb hard drive
512mb of ram
15 inch LCD with no dead pixels
a DVD-RW / CD-RW burner
Lithium ion battery
a second monitor port
4 USB 2.0 ports
a PC Card slot
a 56K modem built in
10/100mbps wired ethernet nic built in
the Windows XP home restore disks
a LiteOn 115 ac power supply
It needs to be taken apart and have some heat grease put between the processor and heatsink. When it gets hot it shuts off, checked AMD Processor forums common problem they didn't put any grease on the processor. This would make someone who is into laptops a good one. 300.00 shipped or trade for equal value. Don't be shy. This could be your lucky day.

Hmmm, another 'museum' request. See 'em all the time.

So, who actually owns the aircraft? I mean when it is sold off who will get the money.

I have been approached by 'museums' for my BC-375, ART13s, 348s etc even my BC-610.

But in the end it was an individual or his kids who would finncially benefit in the end.

So where does the financial ownership of material donated utilmately end up?

"=K=5=D=H=" <k5dh@qsl.net> wrote in message
news:AridnZeHf8rZ6YLZRVn-iw@centurytel.net...

> WANTED: B-17G Flying Fortress radio equipment
>
> This is a long message... please read it all!
>
> The Vintage Flying Museum of Fort Worth, Texas, home of B-17G N3701G, "Chuckie", is seeking DONATIONS of any kind of radio and radar equipment that would have been used aboard B-17G's built from early-1944 on.
>
> Our airplane is a B-17G-70-VE, serial number 44-8543A. She was built in January, 1944, by the Vega division of Lockheed (B-17G's were built by Boeing, Douglas, and Vega). She was converted to a "pathfinder" model, which means she had a radar set installed in place of the ball turret which allowed bombing through overcast. Very few Forts were converted for this mission, and it is possible that our Fort saw combat time over Europe. The combat records of the pathfinder Forts are still classified, so we may never know for sure.
>
> Right now, the only original radio gear installed in the airplane is a BC-348-P receiver and shock mount. We need everything else. Some of the specific items we seek are the BC-375-E transmitter, tuning units TU-4B through TU-10B, BC-306 antenna matching unit, the wooded tuning unit storage rack that mounts to the rear bulkhead, ceramic feedthrough insulators, power

> and control connectors, and cables. We're also looking for command set transmitters, receivers, racks, cables, control boxes, spline cables (the LONG ones that will reach the flight deck ceiling), modulator, and so on.
>
> Obviously, we are looking for NICE equipment that is in display condition because we display the airplane both in the Museum and at air shows and fly-ins. We'll certainly accept donations of "parts units", but the primary focus is on acquiring gear that looks good enough to be installed in the airplane. We want to impress our tour guests at the air shows with a great looking radio room! Do you have some surplus military WW2 airborne radios stashed in your garage or attic? Would you like to see them go to a good home? Please donate your equipment to VFM and help us restore the radio compartment in our beloved B-17! Any radios and accessories that we don't use in the airplane will be either put on display in the Museum's exhibit hall or sold off to generate money to help finance the effort (no matter how much gets donated, we'll still end up having to buy some stuff to complete the job!).
>
> We are a small museum, and we have very limited funds available to spend on things that don't actually help us to keep the airplane flying. We are looking for DONATIONS of equipment. We are a 501-c-3 tax-exempt charitable organization, and we will provide a tax receipt for your donation.
>
> "Chuckie" is one of approximately 15 B-17s worldwide that are still in flyable condition, and one of about 10 that is flown regularly. Please don't "bash" me if my numbers are off by a plane or two; the numbers go up and down as some Forts come out of restoration and others go down for heavy maintenance or retirement. She participated in the fabuluous Thunder Over Michigan air show in 2005 in which EIGHT of the remaining B-17 population were not only present at the show, but flew together! It was the largest gathering of civilian B-17s in history, and it may never be repeated.

Hi I have had my ft-847 for 5yrs lately ive been told the audio sounds
like crap? unreadable,
I use a md-100 and the std mic still with no diferance
Thanks Dave VK4XES

Problems of this sort are often attributed to RF coming out of the transmitter, and getting back into the microphone-audio circuit and being detected. You can end up with a very nasty-sounding feedback-like hash on your signal.

RF pickup might be through the microphone and its cable, or (I believe) through the system power supply.

Any such problems suggest that you may have a significant amount of RF voltage floating around in the shack/vehicle and on the radio chassis. The causes can vary. If you're feeding a long-wire/random-wire antenna and are bringing the wire into the shack, you're likely to have these "RF in the shack" problems, and switching to a balanced antenna fed by coax or a good balanced line might reduce or eliminate the problems. If you're already using a coax or balanced feed, you may want to check the condition of the antenna - something may have come unplugged or have broken.

If you're operating HF-mobile, check all of your ground connections between rig, chassis, and antenna. If a ground connection has come loose or has corroded, you could be getting significant amounts of RF current flow where you really don't want it.

You could try adding a few ferrite beads around the mic lead (just before it connects to the rig) and to the +12 power supply line, but this is sort of a band-aid and doesn't really address the cause of the problem.

Since the problem has just started occurring recently, and you've been using the rig for years, I'd guess that some wire or connection has come loose or has corroded somewhere, and that a good check, clean, and tightening may resolve the problem.

```

Can anyone recommend an RF/microwave engineering components-testing
small company or consultant in the Silicon Valley area?

We have to evaluate RF/MV diodes (chip level, discretes, singles,
quads, etc.) and MIS capacitor chips at frequencies up to 35GHz.

If you can help, please e-mail to us or post to the group!

Generally its the VCO trimmer caps causing that raspy signal. Usually
shows up on CW first. The tuner is not connected to the synthesizer at
all.

I think its coincidence the tuner makes the signal raspy, warbled

Gary K8IZ

I currently offer a service for Mobile Phone users in rural/remote areas, where I fit a Yagi antenna for people with poor reception problems. At the moment I use a Mobile Phone's signal strength reading (along with a map and compass) to locate the strongest signal from the nearest base station (the region where I work, there is only one service provider). Because these readings are a bit slow to respond, I would like to build/buy a simple signal strength meter to be a bit more accurate, when setting up these antenna's. I either need something with a meter or even simpler (and maybe better) headphones listening to the familiar signals sent out by these things, to find the strongest signal. Because I work in very remote areas normally, I am guessing that the base station signals, should not be that hard to distinguish from the normal mish mash of mobile phone signals. Would anybody be kind enough to supply me with a diagram or a web site etc, to help me on my way? PS 980Mhz.

After years of open-wire lines and wire antennas in trees, I'm going to coax-fed antennas on a tower.

One unit has the Johnson coupler, the other has a Drake W-4 coupler with it, for monitoring power/vswr. The Drake coupler needs to calibrated to the Johnson panel meter. I have not used either coupler or internal meters.

Manuals are on BAMA and other places.

I have pictures; the units have done their job well, and show the wear.
One has the relay and rcvr jack, the other doesn't.

As is where is, not DOA but see coupler/meter warning above, $300 for either one, $575 for both, shipped to your conus doorstep when the check clears my bank.

TIA & 73,
Dave Windisch, N3HE

I have a new Yaesu FT-817ND that I would like to use on PSK-31.

According to the manual, one should be able to just connect the radio to the sound card without the need for any interface boxes such as the Rigblaster or Nomic.

I have done this with my old Icom IC-735 and it worked pretty well up to about 10 watts of output, so one would think I should be able to get away with it running only 5 watts or less on the FT-817.

My question is, have any of you all done that with success?

As for connections, I must say that the FT-817ND manual is pretty bad at explaining how to hook it up.

On page 38 the manual discusses SSB-based AFSK and shows the radio connected to a TNC.

Then on page 39 under PSK-31, it says only to "Connect the FT-817ND to your computer's sound card or interface" without going into any detail on how to do tyat.

I can only assume that the connections for audio are the same as shown on page 38, but they don't say that explicitly.

The big question is, how is the PTT connected? Does that operate off of DCD or DTR on a serial port? If so, note that the voltage coming out of a serial port's handshake lines can be as much as +/- 15 volts and still be within the RS-232 spec. I find it hard to believe that +/- 15 volts on the PTT pin of the radio is OK.

Of course, if the VOX circuit is active and can hear the audio from the data connector's Data In pin, then VOX could be used to switch to transmit mode.

Do any of you know if VOX will work in PSK31 mode?

Thanks and 73...

Rick WA1RKT

NOW AVAILABLE ** New Program "INPUT_Z.exe"

This program calculates the often required input impedance, Z = R+jX, of a coaxial transmission line when terminated with a load impedance such as a radio antenna. It uses full classical transmission line formulae and therefore avoids the errors inherent in the Smith Chart at the lower radio frequencies.

Also calculated are line attenuation, reflection coefficient, angle of reflection coefficient, SWR, power efficiency, and the line loss in decibels in the presence of SWR.

Input data of frequency, line length, load resistance and load reactance can be varied in small increments from the keyboard to allow line behaviour to be observed. The diameter of the coaxial inner conductor is also input, this being needed for calculating loss in the line which affects input impedance.

Download program INPUT_Z (40 K-bytes) in a few seconds from website

below and run imediately.

Typically, one uses the RTS (request to send) line of the serial port
for PTT purposes. This depends on your PSK31 software package.

Using an optocoupler, rather than connecting directly, is probably a
good idea. A lot of PCs these days use pseudo-RS232 voltages (either
+5 and ground, or +5 and -5) but it's probably best not to take
chances that your rig might object to higher voltages.

>Do any of you know if VOX will work in PSK31 mode?

If you're going into the MIC input, probably so.

If you're going into an auxiliary-audio input, it may not. On my
TS-2000, the auxiliary audio input doesn't support the VOX circuitry
and doesn't work with the software-based "activate PTT" command over
the RS-232 port - it only works with the auxiliary input's "PTT"
ground-to-transmit line.

It isn't that easy unfortunately. In all the digital systems the base
transmit power level adjusts according to a power up/down request sent
from the mobile, so if you don't have an active transmitter you may not
hear anything on a low-use system. At 980 Mhz the provider is probably
using CDMA? In that case you might be able to find a receiver capable
of finding and following the pilot carrier, but this solution won't be
simple, and it won't be cheap.

Stick with the compass / map approach.

For anyone interested, check the link. Very nice set of 3-500z
graphite lete production tubes. Actually, these are 3-500zg/8802, which
are sometimes referred to as 3-600's simply because of the 100 watt
higher plate dissapation over standard 3-500 types.
Take a look!

someone on here said there was a radio parts outfit that beat
out radio shack by miles. Was us USHER?  or RUSHER? or sometihing
like that.  Whoever it was i reuested a catalog via mail and
got a msg saying I was put on the mail list, but nothing furhther
has happened and its been months since then.  Refresh my mind
if possible (I am 85) it may not be possible!!!  If you have
an 800 # on whoever that company was gimme dat too.
                       Joe/KH6JF

Let me guess.....Mouser?

http://www.mouser.com/

Most parts companies don't issue catalogs anymore; you'll need to check
their web site.

Mouser sent me a couple of catalogs, the last probably sometime last
year. When I received no more, I assumed that it was because I hadn't
ordered anything from them. Their catalog is on line, but they don't
have everything: I found stuff in the Newark Electronics catalog that
wasn't in Mouser's.

Then there's DigiKey as well.

"Perce"

FS: Drake TR-4CW/RIT
The TR-4CW/rit was one of the last off the line, serial no. 45311, and has the hard-to-find 34-PNB noise blanker installed, which I've seen go separately for $200. It is extremely clean, a conservative 9+. Flawless front panel except for one 1/8" scratch below the RIT button. Cabinet top is perfect. Both sides are perfect except for one very small scratch on the left side. Chassis is clean, no corrosion, no smoke deposits. No evidence of modification. Two extra crystals are installed for full 10M coverage.
Price: 950.00   Plus Shipping

New program LINE_ZIN, for given frequency and load impedance, for balanced-twin lines, calculates -

Impedance Zo
Input impedance, R+jX
Attenuation, dB
Power efficiency %
Loss with standing waves, dB
Reflection coefficient
Angle of refl.coeff.
SWR at load end
SWR at input end

Input data can be varied in small increments from the keyboard to observe how a line behaves. Practical and educational.

Download program LINE_ZIN (40 K-bytes) in a few seconds from website below and run imediately.

....

```

I noticed the Yaesu FT-840 has re-appeared on both HRO's web page as well as Texas Tower's web page. HRO has it listed as "in stock". Has this radio been brought back from discontinued status?

-Curious

Recently did a web order by phone with Mouser and about 3 weeks later, un
announced and un needed, received the catalog in the mail!

It isn't listed as a current product on the Yaesu web site, but the
archive reference is still there:
http://www.yaesu.com/indexVS.cfm?
cmd=DisplayProducts&ProdCatID=102&isArchived=1&DivisionID=65

My guess is that you're seeing a closeout.

Its marketing 101.... *any* order or correspondence gets you on their mailing list. Same thing with my customers.... I always gat a name, address, and phone number immediately after "Hello". From then on out, for up to 5 years, they are in my database and get fliers, mailers, post cards, etc with the special de-jour. One of the best tricks is to send out cards to *all* of the folks in the data base with a discount coupon on renewal of their service agreement. You say you don't have a service agreement?? , no problem, we will give you the discount as an "introductory offer", when can we schedule you for a complete heating/cooling system perfoemance evaluation?

It works a whole lot better than folks think.... and you still got the catalog to look through for your next order :-)

Amateur Electronic Supply lists it as "Discontinued by Manufacturer"
but still available in limited quantities in stock.

And same with DigiKey. But I'm going to request that
they NOT send paper catalogs. They've got so much
stuff that they keep making the font smaller every year
to fit it all in there. (And/or maybe my eyes are getting
old! :-)
Actually it is never ALL in the hard-copy catalog.

That sounds like a local HVAC company that called me 35 times in one week, insisting that I "Needed" their "Central air tune-up special" I told them the fist 34 times that I didn't even have a window air conditioner, let alone a central air system and not to call me and tie up my business phone line again. The last time she called, I asked her how many phone lines they had. The woman wanted to know why, so I told her that if I got one more call that I was going to contact a lot of people to have them make repeated calls about their services, then to have them come out to give a price on a new central air system before telling them they had changed their minds. She yelled that it was harassment. I laughed and told her, "Now you know how I feel!", and hung up. They never called me back.

Sorry you got caught in the telemarketing loop.... I only do mail-outs....
and even then at the most only once a month.... The only time I call is the
the night before a scheduled appointment, and again when I am enroute. There
used to be an HVAC company here that did the same telemarketing routine that
you got... their agreements were'nt worth the paper they were written on,
and they had done more damage to the folks systems than they repaired. I
gained a lot of customers from them. FWIW, I have *never* done a "tune-up"
special..... Thats a real good way to end up on Dateline, or 60 Minutes.
:-)

You only have *ONE* DD214?? I have 4 of them... did 22 years in the US Coast
Guard. I just hung around until it wasn't no fun no more :-)

I wasn't trying to imply you were that bad, it just reminded me of some of the low lifes around here who change their business name more often than they replace their trucks. I grew up in Ohio where MOST trades people took a lot of pride in their work. I now live in Florida and I have NEVER seen one good drywall job. My dad and step mom bought a new home two years ago. The bastards sold them a heat pump, and installed central air with heat strips but no heat pump, before they disappeared.

I have a firm rule: I NEVER do business with any telemarketer. Everyone in my subdivision got a letter for a realtor informing them that their property had gone up 37,000 in the past year, and claiming to have been in business for 25 years. I have access to the county's property database, and not one home in the subdivision had gone up that much, except one that was replaced after the hurricanes the year before. Like most of the homes here, my property had gone up less than $2,000. I checked out the "Realtor" to find that he didn't even have a listed telephone the year before. I should have turned him over to the state for fraud.

> You only have *ONE* DD214?? I have 4 of them... did 22 years in the US Coast Guard. I just hung around until it wasn't no fun no more :-)

I only did one tour in the US Army in the early '70s. They were phasing out my MOS, and hiring civilians. I was offered a civil service job at Ft Rucker, but I turned it down. My MOS was "TV Equipment Repairman", which meant that I was a broadcast engineer for AFRTS. As far as having fun, I nearly caused a riot at Ft Greely Alaska, when I transmitted out station ID in color on a completely monochrome facility. I couldn't let the base information officer get away with telling me, and everyone else that it was impossible to use anything at the station for color. To add insult to injury, I did it at 6:00 PM, at the start of our live newscast to make sure that the maximum number of people would see it before I hid the evidence. NEVER tell the engineer what he can do! ;-)

The sig file is there to be in the face of a moron who has been stalking me on line for some time, and a couple idiots who don't think much of the US military, and veterans in general.

BTW, the quarterly memorial for Veterans who have died in marion County Florida in the past quarter is this morning, but I'm not well enough to attend.

FS As New hy-gain Ham IV Rotator and Control box. This Ham IV has been used less than one year and is in great condition. I just check it out and all functions work as they should. It has been in storage for several years so could probably could use some new grease. It comes with a nice copy of the manual. Price is $325 shipped in lower 48. Thanks, Charlie Hugg, K5MBX

I'm looking for a dual-band amplifier for the 144 and 440 MHz bands
that will do both FM and SSB.

I'll be driving it with nominally 5 watts from an FT-817 and I'd like
to get at least 30 watts out.

The only dual-band amplifier I've been able to find is the Mirage
BD-35 but that one is FM (Class C) only.

Any suggestions?

My IC-765 had the same problem. I brought the radio to Icom & they fixed the
problem at no charge. I believe this is a known problem with the wax(?)
placed on top of the trimmer caps to hold them in place.

Hello all,

I am new to the group but have a specific reason for joining. The primary reason I joined, like many of you I am sure, is to get information about short wave radio. My situation: I have the appropriate parcel of land (110) acres that is free from any legal impediments to building a short wave radio tower. The land is located in West Central Alabama, in rural Fayette County.I also have the necessary funding to build a short wave radio tower and transmitter. The site has been evaluated as a perfect location that is virtually free from any potential liability and from the perspective of reaching millions of people in Mexico and Central America.

Questions for the group:

1. What are the potential financial rewards for owning and operating a short wave radio transmitter/tower?

2. How does an owner go about establishing a revenue stream from

potential purchasers of air time.

3. Who would the primary customer base be?

Comments or suggestions?

Thank you,

DrJoe (newbie)

You are in the wrong newsgroup. FCC regulations prohibit any commercial use of amateur radio frequencies.

> Comments or suggestions?

Perhaps you should try a more appropriate newsgroup.

If you have a fully working Kenwood TR-9130 2 Meter All Mode
Transceiver (prefer with modified Mars, but not absolutely necessary)
available for sale, let me know your price.  Please respond by e-mail
as I am not a radio person and do not read this newsgroup, but am
trying to find this for a relative (WA9VND).  Thanks,

Joe (joemagiera at ameritech dot net)

HI, if it has a remote head like the 733, remove the head and lightly
clean the contacts that mate the two halves together.
```

My 733 does this from time to time.
Good luck!! Let me know if it works.

Hi Joe:

The PCS-3000 uses a 12 pin connector on the radio end. Make sure
you find the right one. I have a "like new" 3000 which will be going
on Ebay shortly. I would sell you just the mic, but it kind of makes
the
rest of the radio useless, hi hi!

Tedd, VE3TJD

Tedd,
Your right, it is a 12 pin female plug. I guess at 85 I have
trouble seeing or counting. The recptacles are so old they
have lost all their springiness.   I tried deoxit on em and they
would work for a while, then I'd try to pinch them back together
and again within weeks one or several would'nt make good contacts.
And I dont think there is a 12 pin mike plug available this side
of heaven.   Good luck on your sale I am sure someone will get a
good deal from you.
                        Joe

I've got a Butternut vertical HF6V and have plans to place it up on the roof. I've had it ground mounted (worked super) but due to family uses for the yard will have to move it up and out of the way.

Rather than laying down 20 pieces of wire on my roof for radials (insulated with the tips protected) I'd like to try and build a Butternut "No radials required with the optional CPK Counterpoise kit" but I'm having difficulty finding the specs.

Has anyone ever built one or have the measurements for a general purpose counterpoise kit?

Thanks.

John

Just run the radials... it will take around 550ft of wire.... I have my 5BTV
on the roof with 20 radials... the 75 meter radials are guyed out to trees.
It works very much good. :-)

Bencher has the instructions on their site:

<http://www.bencher.com/pdfs/00236IZV.pdf>

The spreaders are 5.5' and the wire is 8'3" on a side.

"DrJoe" wrote ...

> I am new to the group but have a specific reason for
> joining. The primary reason I joined, like many of you
> I am sure, is to get information about short wave radio.

This newsgroup is not really about SW broadasting (or listening). It is about amateur ("ham") two-way radio communications which uses different radio bands than SW broadcasting (by international agreement). Hams in the US (and likely most countries) are specifically prohibited from "broadcasting".

> My situation: I have the appropriate parcel of land (110)
> acres that is free from any legal impediments to building a
> short wave radio tower.

There are many more impediments than legal. It is getting increasingly difficult for anyone to site broadcast transmitters *anywhere* because of various factions like environmentalists, people who are freaked about electromagnetic fields, etc. etc. And then there is the FAA to deal with since your tower(s) will likely be >200ft tall, not to mention FCC licensing etc.

> The land is located in West Central Alabama, in rural
> Fayette County. I also have the necessary funding to
> build a short wave radio tower and transmitter.

> The site has been evaluated as a perfect location that is
> virtually free from any potential liability and from the
> perspective of reaching millions of people in Mexico
> and Central America.

Evaluated by whom? There are consultants who specialize in broadcast (AM, FM, TV) transmitter facilities. The number of them who do SW is likely much smaller, I would think. The consulting broadcast engineers with SW experience is likely a pretty small community who likely know each other. If your evaluation was from someone who specializes in SW broadcasting, that would be the logical person to start with.

But without knowing anything about the business, I would be very afraid of being fast-talked by someone who had only their own interests in mind.

> Questions for the group:
>
> 1. What are the potential financial rewards for owning
> and operating a short wave radio transmitter/tower?

No offense, but if you have to ask that question, you seem already in way over your head. SW broadcasting is an extremely "niche" market and you can likely count the number of SW broadcasters in the USA on the fingers of your hands. It seems extremely doubtful that ANY of the current commercial (non-government) SW broadcasters in the US went into the business for the money. A fast-food franchise would be an infinitely more logical investment.

> 2. How does an owner go about establishing a revenue
> stream from potential purchasers of air time.

Much like any other business. You work in the industry for several years and "learn the ropes". Or you partner with someone with that experience. This seems like a dubious investment if you don't even know if there is any demand for your airtime.

> 3. Who would the primary customer base be?

Do you do any SW listening? Do you know who the customers are on your competition? If you don't know the answers to these questions you have a great deal of homework to do. Keep your money in a CD until you can pull it all together.

> Comments or suggestions?

There are likely NO broadcasters, AM, FM, TV, or SW who do their own engineering (siting, towers, legal, licensing, transmitters, feedline, studios, operations, etc. etc. etc.) These kinds of specialties are virtually always contracted to a broadcast engineering consultant, likely several of them who are each specialists in their particular area.

The business side is also very specialized. Particularly for SW broadcasting for which there seems to be minimal demand in the continental US. (Based on the miniscule number of broadcasters out there.) I suspect that the majority of SW broadcasting from North America (or owned by US entities) is likely non-profit religious.

Google returned 1.18 million hits for this query:
shortwave broadcasting in north america

The majority of them seem to be about SW listening, but there may be someting about broadcasting in there somewhere, also.

I just acquired an FT-107m and I have a question.

The display is useless. On power up, it will show different characters
and not change at all while the frequency is changing.
The mode LEDs change when different modes are selected.

Is this the chip problem I've seen kits for or is it something else on
the counter board?

Where is the best place to acquire the modification?

Any thing else I should look for?

Cheers

Dave

Thanks for the info - looks like it might be fun to try and build one...
I'm sure a lot of vertical users would find something like that very
handy...

Kind of reminds me of the CB antennas I see with their ground plane kits
except for the wire...

Tone board? Most radios made in the past 10 or 15 years have tone
built-in. I don�t think you can buy a new one today that doesn�t.

My suggestion if you want a used radio is to look on e-bay, or get to a
local hamfest.

Posting again due to change in photo status...

I've already had 4 requests for pics, and I don't want to spend the day sending pics so I've put the pics on a free hosting site for everyone to see.   Feel free to take a look - I feel the radio is in great shape.

Any questions let me know - it played when I got it about 2 - 2 1/2 years ago and has been sitting in the closet ever since. I've been advised not to power it up again without a variac (which I don't have) so all I can say is it worked when it was put up for storage.

Have a great weekend - let me know what you have to trade, looking for solid state or hybrid ham transceiver, quality short wave radio, trunk tracking scanners, or ??? I'm just not into boatanchors.

Thanks.

John

Hi Dr. Joe,

I have had some professional experience with a bit of this in my
former capacity with the US Dept of Defense. In the case I was
involved with, we had a great deal of effort keeping a short wave
broadcaster OFF the air in some specific frequencies because of
interference with an operation we were involved in. This wouldn't
affect you, but in the process I had to do some research and we
had some involvement with the FCC who we mainly worked with
to kill the proposed broadcasting service in the HF Short Wave area
or to put it somewhere else. AFAIK, it was never resusitated

On 30 Mar 2006 09:47:22 -0800, "DrJoe" <phdjwg@earthlink.net> wrote:

>short wave radio transmitter/tower?

Virtually none. There seem to be two groups broadcasting on HF SW.
There are a few religious broadcasters such as HCJB from Quito
Equador. I don't really remember any broadcasting directly from the
US. The other group is propaganda from governments for consumption
overseas. This would include the Voice of America which is forbidden
by charter to direct programming to the US (although many short wave
listeners in the US listen to it), the overseas service of the BBC,
Radio Moscow and the like. Many countries, even smaller ones will
broadcast their propaganda or the news as they see it and the main
audience is the intelligence services of other countries who pick it

up and forward it to intelligence agecies. The CIA has , for example, the Foreign Broadcast Information Service doing this. This is not a covert operation, in fact quite open. The listen to the broadcasts, transscribe and translate what they here into English reports and forward them to other US Government Agencies who may have in interest in what is being said. The Intelligence Services will listen to it with a view to seeing if a foreign government is publicly saying what the intelligence services have picked up by other methods. Its just another source of information for them. The community of short wave listeners is actually quite small and for the most part are little interested in any commercial applications. While we hams all have short wave radios, many of which are capable of hearing these broadcasts, we probably do very little of this after perhaps an initial exposure. As a kid, before I became a ham (in the 1950's) I used to listen to some of this, but soon tired of it.

>

>

>2. How does an owner go about establishing a revenue stream from
>potential purchasers of air time.

Probably this is not terribly practical because of lack of common interests. There are better ways to sell stuff internationally or to advertise it, notably the internet and ebay. There are a few highly specialized services such as the British shipping weather reports which generate some revenue, but most of that is now done today by UHF and SHF satellite telephone systems. Some very large corporations like RCA maintain international HF messaging services, but the HF portion of that is dying as satellite takes over.

>

>

>3. Who would the primary customer base be?

Well a lot of people could potentially listen to it, but the reality is that there is a small community of hobbyist short wave listeners. They could hardly be considered customers because they are seldom in a position to buy anything that they hear about on Shortwave HF radio. The religious broadcasters do have a small base in HF, but the stuff being bought and sold (your soul for example) is a commodity which usually doesn't involve revenue. There are some which might solicit contributions from listeners to keep the service going but that is usually a zero sum game or less. The religious broadcasters depend upon contributors to whom operation of such a station is considered important, but mostly it is a non-profit venture.

>

>

>Comments or suggestions?

HF broadcast is a dying mode. There are better ways and more appropriate frequencies to reach audiences and advertising sponsors. Because of radio propagation vageries, it is really a poor means to broadcasting for one would have to know (and be licensed for) many variables. For instance a certain frequency could be useful at night for a path to an intended recipient, and totally useless by day; or, vice versa.

It would strike me that the mere possession of some land would be a
poor rational for starting any broadcasting venture.

In a reply to Dr Joe, W3JT wrote in part:

"The community of short wave listeners is actually quite small......"

"Well a lot of people could potentially listen to it, but the reality is that there is a small community of hobbyist short wave listeners."

I was under the impression that the opposite it true; that shortwave listening, particularly in Europe, is very active. Curious to know what W3JT based his comments on? Perhaps Im behind times and the internet has taken it's toll on SWL along with other systems including ham radio. Thanks.

Murray, K3BEQ

> I've been advised not to power it up

Good advice. Let the new owner risk frying the power transformer if he wants to fire it up before replacing the capacitors (see http://antiqueradio.org/halli12.htm).

At a glance, looks like it's in reasonable condition. Nitpick: missing a piece from the clutch (brake?) assembly for the main tuner in front, but aren't they all? I have two SX-28's. One is missing those parts, the other one has them.

Regards,

Phil Nelson

NOW AVAILABLE ** New Program "TRANCO_1.exe"

This program analyses performance as a transmission line, of a single-layer solenoid coil which may be inserted in an antenna wire. The coil itself may be used as a very short vertical antenna at its 1/4-wave resonant frequency.

From the input data of length, diameter and number of turns, the program calculates inductance, capacitance and resistance of the equivalent transmission line. The secondary constants of characteristic impedance Zo, phase shift, velocity factor, and attenuation are calculated. Also the feedpoint input impedance, R+jX, for when a coil is used as an antenna.

Because of the sensitivity to the environment of such an antenna and its high Q it will be necessary to trim antenna length to a particular wanted resonant frequency.

Download TRANCO_1 in a few seconds from website below and run immediately. Filesize = 38 Kbytes. (It's at the bottom of the list.)

....

Averatec 5400 Athlon 64 1.6 2800+ 512 DVD Burner Win XP Laptop
It has a AMD Athlon 64 XP-M 2800+ processor 1.6Ghz 40gb hard drive
512mb of ram
15 inch LCD with no dead pixels
a DVD-RW / CD-RW burner
Lithium ion battery
a second monitor port
4 USB 2.0 ports
a PC Card slot
a 56K modem built in
10/100mbps wired ethernet nic built in
the Windows XP home restore disks
a LiteOn 115 ac power supply
It needs to be taken apart and have some heat grease put between the processor and heatsink. When it gets hot it shuts off, checked AMD Processor forums common problem they didn't put any grease on the processor. This would make someone who is into laptops a good one. make me an offer loot or trade what do you have? I figure value to be 4 to 500 bucks. There are some on ebay listed for over 700.00
Thanks for looking.

It's probably too late by now to do this, but if you have good line-of-sight over the surrounding countryside, you'd probably make more revenue by leasing tower space and floor space in an building close to the tower to commercial radio or telephone cell site interests.

FS Beautiful Icom IC-751 all mode SSB / AM / FM / CW / RTTY Transceiver 100 watts. Superb condition in both appearance and electronically. Well cared for, works 100%. This radio has always been in a nonsmoking environment. Includes hand mic, original manual, and power cord. Also has the Optional CW Filter installed. Rare to find one in this condition. Price is $400, plus shipping. Thanks, Charlie Hugg, K5MBX

FS Startek Frequency Counter Model 15-UHS. This is the Ultra High Sensitive counter that covers
1 MHZ to1500 MHZ. It is as new in the original box with the manual and battery and battery charger/power supply. These counters are still sold for $170. See The Startek International Inc.
webpage for more information. I am asking $85 plus shipping costs. Thanks,
Charlie Hugg, K5MBX

oh please, AMD is every bit as fast as an Intel (of the same type of
course) and not a rip off.
Intel is way overpriced, but if you like the "so-called" brand name, be
my guest.

Hi all,

The Car and Deep Cycle Battery FAQ has been updated. The current version is 5.4, dated April 1, 2006 and can be found on www.batteryfaq.org. Answers to Frequently Asked Questions, tips, manufacturer's information, references and hyperlinks are contained on this free, consumer oriented Web site about car, motorcycle, power sports, truck, boat, marine, recreational vehicle, solar, and other starting and deep cycle applications.

The most popular sections in February were:

Battery Manufacturers and Brand Names List

FAQ Section 9 HOW DO I CHARGE (OR EQUALIZE) MY BATTERY?

Section 7 WHAT DO I LOOK FOR IN BUYING A NEW BATTERY?

Battery Information Links List

Section 4 HOW DO I TEST A BATTERY?

If you have time, please visit www.batteryfaq.org. If not please bookmark it for future reference. Questions, comments and suggestions for improvement are always welcome at info@batteryfaq.org.

Many thanks and kindest regards,

BiLL.....

It seems rather inauspicious to have the document date so prominently displayed at the top of the document... "April 1, 2006" Many people try to avoid having serious

```
documents dated on April Fools Day.  :-)

One of the "great moments" of my life was watching a B-17 coming in to land at the local airport. I didn't know it was coming in,and the noise and profile when I figured out just what I was seeing was overwhelming. I'm richer for it, and so are all those who have the experience. I've seen a lot of historic planes and spacecraft in museums. They are very nice and all, but to see one actually working is orders of magnitude better an experience. Museums bear more than a passing semblance to funeral parlors. Interesting idea to store the B-17 in the desert - that is where the plane graveyards are.

I'm a machine man, and machines are made to be used IMO. I don't care if it is automobiles, trains, radios, or airplanes.

Hi   hold down LIGHT + SET and power on and input 9999 as code
thats how it works on my radios

:-) Brian.. OZ1TEN

I have a strange problem with my IC-761 that I purchased recently. Any help would be great:

I notice that once in a while CW signals will start to sound a little warbley, as if infected with a little AC hum. At first I assumed this was a characteristic of the TX signal on the other radio but soon discovered that if I play with the auto-tune switch it will go away. Further investigation has shown that if I have the tuner on and play with the preset control it can start or stop the problem. The issue seems to be with interference to the rx signal from the auto tuner. Can the auto tuner affect the synthesizer in this way?

Thanks,

Anthony

Looking for a laptop, 3-500mhz in excellent condition. Must have 9 pin
com port , USB , CD , Floppy , etc.I have a Pro-2006 with the FULL
Opto 456 in used condition working 100%.I will trade even for the
right laptop. IBM 390 is a good example of what I'm looking for.

Congratulations Tom

that is an impressibe amount of subscribers. i think mostly US in
europe this is not the most poppular receiver.

With kind regards

Han The Netherlands.

You can also visit my website with a lot of recordings of rediostations
under 30 MHz.

http://home.wanadoo.nl/hanhardonk/indexengels.html

(Let's try again with the URL hopefully corrected - I don't understand how they got corrupted in distribution - looks alright leaving here and on screen but the actual properties show an extra character)

This group has the most complete collection of modifications, usage tips, links to related websites, documentation, and photos along with a user survey and a message forum (4000+ messages archived) to help you get the most fun and DX out of your Realistic / Radio Shack DX-394, DX394, DX 394.

Over 90 mods and tips now listed plus a dozen on the To Do or Wish List. More mods than for any other general coverage receiver! Thoroughly documented with a Master Index. If you like to tinker with radios, I know of no other recent model that lends itself to as much fun in this arena as the DX-394. Great platform for learning radio-electronics. Always 1 or more FA on eBay.

Active & friendly user community now with over 1000 members. Some members are keen short wave listeners; others are into AM DXing and a few enjoy long wave. Many experiment with antennas and some are ardent modifiers - customising and souping up the rig as hot rodders would do with cars. You'll find lots to interest you and help get the most out of your radio.

All here at:
http://groups.yahoo.com/group/RADIOSHACKDX394/

Subscribe on line (for full access privileges to the extensive collection of Files, Photos and Links) or by email:
RADIOSHACKDX394-subscribe@yahoogroups.com (for message posting/receipt only).

73, Tom

Just FYI: I see a lot of these mods to increase sensitivity -- resulting in
trashing the dynamic range

Remember some of these mods are made by amateurs

The factory engineers designed the sensitivity for very good reasons
--
CL -- I doubt, therefore I might be !

Which of these mods do you think increase sensitivity at the expense of dynamic range?

> Remember some of these mods are made by amateurs

Many of whom are electronics professionals. That's not to say that novices at electronics do not carry out some mods. One of the virtues of the DX-394 is that it can be readily modified and doing so is a great educational activity for someone getting into radio and electronics.

> The factory engineers designed the sensitivity for very good reasons

And made some mistakes in other areas, e.g., decoupling around the IF filters, AGC time constant for SSB (factory corrected in the revised versions), and some design trade-offs or decisions that owners want to correct. That is true of every product.

> --
> CL -- I doubt, therefore I might be !

And I was named after the biblical doubter.

Tom

Dave, try a Google search using the brand and model. I was able to get
the service manual for the old (70's) CDR TR-44 rotator that way. It's
amazing what's out there.

Jim Chandler, N5COT

I refer you to the Elecraft page

http://www.elecraft.com/K2_perf.htm

Sez
MDS = Minimum Discernible Signal (3db increase above noise floor). Larger
negative numbers are generally better, but too much sensitivity can reduce
strong signal dynamic range and Ip3. Pre-Amp On MDS numbers of -130 dBm or
more are more than adequate for most HF band operating, since band noise is
typically above this number. (Lower frequencies need less MDS (more +number)
due to an increase in atmospheric noise.)

Problem is, many times those reasons have more to do with cost than
with performance.

I am looking for a Dual Band 2 Meter/440 tranceiver. It needs to have a Tone
Board so that I can
access local repeaters. Please let me know what you have, model,condition,
price.
Thanks, Charlie Hugg

FS Beautiful Icom IC-751 all mode SSB / AM / FM / CW / RTTY Transceiver 100
watts. Superb condition in both appearance and electronically. Well cared
for, works 100%. This radio has always been in a nonsmoking environment.
Includes hand mic, original manual, and power cord. Also has the Optional CW
Filter installed.  Rare to find one in this condition. Price is $400, plus
shipping. Thanks, Charlie Hugg, K5MBX

FT-7800R is a great dual band rig... I have 2 of them an dwill probably buy
another one in the next month or so. HRO has them on sale from time to
time... I got mine for $225 each, the current price is around $250. Well
worth every penny

I have no dispute with that. Rather with your first comment:

>>> Just FYI: I see a lot of these mods to increase sensitivity -- resulting
>>> in trashing the dynamic range
>>

>>
>> Which of these mods do you think increase sensitivity at the expense of
>> dynamic range?

You did not answer the question. The answer may well be 'none'. I'm not aware of any aimed at increased sensitivity, unless adding an amplified preselector counts as a mod. And that could arguably be for improved dynamic range and sensitivity by improving front-end selectivity and noise figure. Most regard the DX-394 as a very sensitive receiver that is outperformed in that spec by few others. But itcould do with improved overload threshold and IP3.

Methinks you might be trashing imagined mods rather than the ones well-documented in the user group.

Tom

Because the original poster is a Canuck, and doesn't know any better?

The DX-394 is a scanning receiver, reviews have described its user interface
as reflecting a scanner heritage, it has been a topic in all the newsgroups
to which I posted the notice, and similar notices have been crossposted a
few times in all these newsgroups informing potentially interested parties
about http://groups.yahoo.com/group/RADIOSHACKDX394/, without objection.

Are there any other newsgroups for which it would be relevant? The ones I
posted to are:
rec.radio.shortwave, alt.radio.scanner, alt.radio.scanner.uk,
rec.radio.amateur.equipment, rec.radio.amateur.homebrew

73, Tom

I was intrigued by that post and joined the group. DX 394 is quite a bit part of a listening hobby.

The DX 394 scans a slightly different breed of frequencies...or does it? My Yupiteru MVT 7100 picks up all those same frequencies also, and then some. Does that mean my Yupi is technically NOT a scanner because I can also use it as an AM/FM/SW/SSB/Weather/TV audio/CB/Communications/Marine/Police/Fire/Ambulance radio receiver as well?

It is a LW, MW, SW receiver that scans. Is alt.radio.scanner restricted to
discussion of scanning receivers that can tune only above 30 MHz?

Do a search in alt.radio.scanner:
http://groups.google.com/group/alt.radio.scanner/search?q=DX-394+OR+DX394+or+
%22DX+394%22&start=50&
- 66 threads found, dating from 1996.

>
> It's also NOT amateur equipment any more than it is a scanner,
> and CERTAINLY not 'homebrew'.

Why is the DX-394 NOT amateur equipment (I assume you mean 'amateur radio')?
It tunes the HF ham bands and does a credible job receiving the popular ham
modes on its own and is used with software to receive many digital modes. It
is found in many hamshacks. My first SW receiver was a 5-tube Heathkit AR-3
general coverage radio - it doesn't hold a candle to the DX-394 - but it was
the receiving part of my ham radio station.

I agree that the DX-394 itself is not 'homebrew' but the many mods are of
interest to some homebrewers as have the design discussions carried out in
rec.radio.amateur.homebrew.

When did you become the self-appointed policer of these newsgroups? As far
as I can tell, my original post was in the spirit of guidelines about
cross-posting. Your carrying on with this nonsensical criticism by
cross-posting replies is not.

End of discussion.

Tom

*********** REPLY SEPARATOR ***********

You completely missed it, Woody. My only concern here is to preserve a historical artifact which once destroyed, can never be replaced. If the current owners and future owners keep flying it around, it eventually will be destroyed. Hopefully at some point the owners will wise up and say "Enough. Lets park it before it's too late.".

My concern is as simple as that. Please do not read other motives into my posts.

Bill T.

Yes, but I'm not crooked enough to get elected.

> Exactly where would you suggest we park general aviation?

General aviation doesn't need parking as far as I can tell.

The B-17G should be parked in the desert, in a hangar, where there is
low humidity and no violent weather. It would last practically forever,
and at five or ten bucks a ticket, would be a source of income also
practically forever. And guess what... no maintenance cost either,
except maybe for a feather duster now and then. :-)

Now, if they were Codar twins , I'd be very interested.

I am looking for a south center meter face for the HamIV rotor. Maybe someone knows of a face JPG that you can download and print on stickey paper. Yes I have checked to make sure that face is not behind the existing north center face.

Also how does one figure out the coils of a TH7DXX antenna. The paint has long gone on most of the traps on mine. I moved a couple of years ago and now getting ready to put it together and installed...... Now how do I figure out the trap locations.....

I just bought an ICOM AT-150 antenna tuner to go with my ICOM IC-735 (still looking for that elusive object, a moderately priced PS-55 matching power supply in good condition!).

The tuner has four antenna "ports" on the back. #1,2,and 3 all have SO-239 connectors and are clearly for 50 ohm balance line antennas/feedlines. The fourth port is simply a push-insert-release wire terminal. The manual states that this port may be used for attaching a long-wire antenna for general coverage reception. However, it also states that all 4 ports may be used for transmitting, as long as the SWR is already 3 to 1 or below.

Now I am curious, if this port is for a long-wire antenna (a balanced load, if the unit is well grounded, right?), does that mean there must be a balun inside the box, and does it have some ratio other than 1:1 (i.e. 4:1, 6:1) if it is to match the 50 ohm input to a high impedance output like a long-wire. Or am I confusing the terms "long-wire" and "random-wire". Would a "long-wire" antenna be a balanced load if it is resonant on some band?

I really would like to know what kind of antenna and/or feedline I could use on this single-wire port for transmitting. Is there a 50 ohm ladder-line that would be a match if I connect the other wire to the ground? Please help!

Ooops! I meant "50 ohm UN-balanced (coaxial-fed) antennas/feedlines"

Not right, alas.

Based on what I see in the manual, it appears to me that the
random/long-wire attached to ANT4 is simply being driven against your

station ground. It's an unbalanced feed, just like the other three ports.

It really seems to be intended for just what they say - receiving - where the impedance mismatch between the wire and the rig/tuner isn't all that important.

> Or am I confusing the terms "long-wire" and
>"random-wire". Would a "long-wire" antenna be a balanced load if it is
>resonant on some band?

No... at least, not in this case. Even if it's resonant, you're still feeding it in an unbalanced fashion against ground (a "Marconi" antenna).

>I really would like to know what kind of antenna and/or feedline I
>could use on this single-wire port for transmitting.

A vertical wire cut to approximately 1/4 wavelength, plus a counterpoise wire cut to approximately the same length and attached to the tuner's ground, could give you an impedance in the necessary range. However, you may run into various "RF in the shack" problems.

The AT-150 doesn't appear to have a very large matching range... it's similar to the internal autotuners build into many of today's HF transceivers. It's suitable for adjusting the feedpoint impedance of resonant and near-resonant dipoles and etc., in order to allow your transmitter to operate into its design impedance and deliver full power. It doesn't really have a wide enough matching range to be useful for a broader range of antenna types (e.g. random-length dipoles fed via balanced feedline, random wires, etc.).

Bill, I'm not reading any motives. I'm simply responding to your approach. It's a bit harsh.

As others have pointed out, there are plenty of clipped wings grounded out just as you describe.

Also, as others have said: We're getting nowhere fast, this is the wrong group for that, and 'tis ok to agree to disagree.

However; I will concede a bit and say you can feel good knowing that if this were the *last* B-17, I'd probably lean your way too. But it isn't the last, and there's plenty of preserves.

What we have come to is quite simple; to collect or not to collect.... that is the question.

The answer of course, is equally simple:

All hail the great and powerful.....*owner*.

Personal prefs aren't much for debating.... so I shall bow out.
regards,
Woody

I am still looking for a Dual Band 2 Meter/440 mobile tranceiver. It needs
to have a Tone
Board so that I can access local repeaters. I am looking for something
around $200.  Please let me know what you have,i.e., make, model,condition,
and price.
Thanks, Charlie Hugg, K5MBX

WTB: Johnson Viking Ranger
If it has the audio mods, thats a plus.
But not that important. Must be  in good working order.
Please leave price and phone number.

It does seem kind of pointless (accept for SW receiving) to have a long-wire antenna port on a ham-band tuner. Is there any reason I could not just wire in a short length of co-ax with a female UHF connector (center to antenna #4 and braid to ground, of course) or mount and wire in another S0-239 connector and have 4 working unbalanced co-ax feed lines coming out of the shack? Minimizing unshielded feedlines minimizes stray RF problems, right?

So what was ICOM's thinking in designing this port the way they did, including front-panel push-button actuation, when all the other ports are automatically selected by band? What would be the best way to take advantage of this scheme setting in up my transmitting antennas?

Bill is 100% correct. He should negotiate and buy the plane from the restorers for its priceless value, say $50-100 million, he can then store it and show it to whomever he pleases! That is the American way!

*********** REPLY SEPARATOR ***********

Your boatanchor will not be destroyed by plugging it in and using it on
your bench at home. No problem there.

On the other hand, if it is one of a very few remaining, it might not
be a good idea to take it on a one-man kayak DXpedition across the
Bering Sea in winter.

Airplanes crash, especially ones flown and maintained by well-meaning but inexperienced pilots and mechanics who are usually short of cash, spare parts and time, and who, sooner or later, will feel the pressure to fly it when they really shouldn't in order to keep an airshow schedule.

Park it.

Bill T.

And he's heard from 'many like...' here.

The word 'obtuse' comes to mind.

Aww...that's too bad. I only saw her once back in the 80's and she
looked fine back then. I guess I should have questioned (in my mind
anyway) the wisdom of keeping her in open air beside--no, in the middle
of (Mud Island - Memphis)--the Mississippi River; but they went to a lot
of trouble to get her there. It's a shame to have abandoned the effort.

This is a case of perhaps a machine which should only be static
displayed. She's not one of the thousands of anonymous 17's remembered
only by their dwindling numbers of surviving crew; but rather a piece of
history with an unparalleled combat record at the time of her retirement.

She's done her bit...

Jeeze Loooo F***in' Weeze Folks! Stop the Global Whining! I don't care about the first post and the request for no BS...you can ask for what ever you want. Now....anybody else gonna pony up a part or two toward having a B-17 with a representative radio position? From what I've learned the radio position will be for display not a necessarily a full on operating position. That is OK in my book, better than an open hole. The op and his group can always have a radio position outside the airframe like Dave Stinson had in Texas that can be set up next to the airframe and operated where lots can see it. Anyway, I gave a grunch of radio gear to LST325 that worked because they wanted to set up an operating radio space. No probs sending some look-at ARC-5 to a B-17. Anyone else going to send some parts? Or just blab?

EdZ

Gidday All,
I have just updated my Website with some lovely and hard to find ICOM Radio's forsale.

There's a VERY RARE IC-1275... 23 cm Radio... plus an IC-475, IC-375
and an IC-271/471 & 1271 Package available too.

Serious Buyers only please...

Cheers and thank you,

Alan - VK3XPD

Alan Devlin.

Holy cow, what a firestorm I've started!

In my original post, I should have included the following statement (which might have avoided this useless fight):

Please keep your opinion to yourself BECAUSE THIS IS NOT THE RIGHT FORUM FOR SUCH A DISCUSSION (on whether it's right or wrong to fly vintage aircraft, etc). I surely did not mean that we all can't have our opinions. This IS still the United States of America, and that IS still one of our most basic, cherished freedoms. I, too, would fight to the death to defend those freedoms. However, there is a time and place to discuss any topic worth discussing, and this simply isn't the place for the "fly or no fly" topic. This is a forum for discussing radios, not the politics of aviation.

Of course, hindsight is 20-20. I apologize to the group for opening the flood gates and inadvertently getting this inappropriate firestorm started.

I'll toss in my comments, since the horse has long ago escaped from the barn.

For those who believe that we should ground our B-17 to preserve it for future generations, lest it might someday be destroyed and no one will get to see one in the future, fear not. There are literally dozens of B-17s on static display all over the world. A few of those static restorations are superb (witness the USAF Museum's Shoo Shoo Shoo Baby), while a many other static planes are cobbled-together airframes that are literally rotting away on outdoor display. One need only look for static B-17s, and they'll be relatively easy to find. They're not really in short supply.

Someone mentioned seeing Memphis Belle flying back in the 1980s (I think that's what they said). Memphis Belle has not flown in decades. There is another "F" model that's painted to represent the Belle, and that aircraft is a regular flyer on the show circuit. As I recall, it's the only flying "F" model.

The comment about many vintage warplanes crashing due to poor piloting and poor maintenance is right on the money. These old aircraft require a LOT of work to keep them safely operational, and they require a LOT of pilot skill and training to keep the pilots from making the poor decision that lead to crashes. Many groups have fallen into this category (including the mighty CAF), but that's changing. We're seeing a big trend toward proper restorations (not just patching airplanes together) and proper training of pilots and crews. The safety records are getting better (though we certainly have a long way to go). The warbird community recognizes that slip-shod restoration work ain't gonna cut it, and pilot training has become the big focus that it should have been in the past. We're not out of the woods yet, but we're a LOT better, and continuing to improve.

VFM's chief pilot (and the actual owner of our B-17) is one of the few B-17 flight instructors in the world. He's owned and flown this particular airplane since the 1970s. Our chief mechanic is a lifelong A&P mechanic (also a ham!). Our maintenance schedule is thorough and very rigorous. NOTHING comes before safety, on the ground and in the air. Our ground and air crews go through recurrent annual training and constant on-the-line training. If there's a problem, then the airplane does not fly. It's as simple as that. No airshow commitment is important enough to risk the lives of our crews or the safety of the airplane. As I stated before, the reason we don't have money to go buy vintage radios is that our money goes into the one really important thing: the airplane itself.

OK... as Ed Zeranski pointed out... the purpose of my original posting was to try to acquire original radio gear for the B-17. So far, a lot of people have come out of the woodwork to argue and fight and whine, but Ed's the only one who's actually offered to donate anything (other than myself; I donated a nice ARC5 transmitter from my own station).

As I told Ed in a private email, the chances that we will be able to put together a working station aboard the aircraft are pretty small. So far, no other '17 has a working station, though several of them have a nice set of original radios installed but not wired. We won't rule out the possibility of getting some of the gear to work (at least the BC-348-J receiver), but since all of the required wiring was removed from the airframe decades ago, it would be daunting task that would require a lot of money and volunteer hours. We prefer to spend the money keeping the airplane in proper, safe flying condition, and using her to share history with those who come to the museum and to the air shows to see and appreciate it.

I said in my original post that we have a BC-348-P on board the '17. I was mistaken. It's a BC-348-J. I didn't have my notes handy when I wrote the post.

So... GENTLEMEN... let's halt the "fly - no fly" part of this thread... let's agree to disagree and get back to the original purpose. If no one is interested in helping us out, that's fine. We will survive. Let's just stop all of the arguing and whining. This isn't the right forum for it. Write to the FAA and ask them to stop allowing us to fly. Write to Air Classics and tell the world why what we do is wrong (and yes, Mike O'Leary WILL publish letters of dissent!). Stand out in front of our museum entrance and hand out flyers to our guests if you like. Let's just re-focus on radio gear here on these newsgroups! Please?

73,
Dean Hemphill, K5DH

Well if you had asked for the radio gear without your horse shit caveat,
rules and regulation probably no one would have responded.

Perhaps it will help if you realize this is an unmoderated, free, open forum.
As such all sorts of folks lurk here. (from the bottom to the top of the scale)
Many obviously with no knowledge of warbirds and restorations there of.
The best way to avoid the "firestorm" is to ignore comments not related to your donation request.

I sincerely hope some will come forward for the radio donations, I certainly would if I had some.

This from one who flew in the 50's prop planes (Before the jets)
I fondly recall the ARC-5's, ART-13, BC-348's etc.

My Uncle flew in B-17's & B-24's in the China, Burma, India theater - he would be pleased with your efforts.
Someday his descendents will marvel that men flew in such machines.
Your efforts are a fitting tribute to the men who flew and died in these planes.

I think is admirable for you to try and put them back in their original setting - kudos and good luck
I'll spread the word here in So Calif for possible donors.

--
CL -- I doubt, therefore I might be !

PC scanning combo , both in EXCELLENT condition.

Pro-2042 with the Opto 535 installed.

Samsung Sens 690 Laptop. Win XP , Probe , Scancat Gold "SE" , etc.

I am asking $700/BO or possibly trades and cash.

also have a UBC 780xlt in EXCELLENT condition (Both US and European BANDPLANS) $350 / BO Might consider trades , depends.

Alpha Numeric a must and pc control on any trades considered.

Thanks for looking , Tom (aka ScanDaBands on Radio Reference and Stong Signals)

Every now and then I think "I should but those old Mostars to good use" and then I think "boy would this be easier if I had a MIB (Mostar Interface Box)"

So does anyone have a schematic for one? Or one laying around?

I know all the usual sites to look for this kind of stuff, and even one or two places to buy one (for a high price). But I'd rather build it, or find a reasonably priced one.

All help is appreciated

Fixed several issues raised by users regarding 3.0, Specifically

1. How the server filter setting is handled,
2. Server report path correction,
```

3. Position dialog default values,
4. Persisted settings for station and gps tracking,

Check http://www.aprspoint.com/ for details. Thanks.

WTB: Collins R-390 spray paint
Hi
Can someone tell me where I can buy Spray paint cans to match the
front panel of the Collins R-390 Reciever?
Any local stores carry a close match??
Also is it difficult to get the panel off?
And any tips on redoing the front panel would be great.
I painted kwm cabinets before, but never did a front panel.
Thanks...Rich
ritchi50@optonline.net

ps: I see the lettering is etched in, so before I paint, do I try to
etch out all the white thats etched in, so when its sprayed I then
put in new white paint?

> front panel of the Collins R-390 Reciever?

If you require an exact match Collins paint, you might check out Surplus Sales of Nebraska,

http://www.surplussales.com/index.html

... they carry a line of paints for the Collins A line, S line, and KWM380. It is likely that if you call them to discuss the R390 they might have a color for that in stock.

800-244-4567

On the process of restoring your R-390, you might take a look at:

http://www.collinsradio.org/

http://users2.ev1.net/~wb7dyw/

http://www.collinsra.com/

For auction on ebay is an Advantage SA-1800D spectrum analyzer. Works
but needs the frequency aligned, also the tracking generator doesnt
work. Covers 2-1800mhz, options include Frequency Display, Marker
Generator and Tracking Generator. Runs on 110VAC, comes with foldable
antenna, power cord and owners/service manaul. Manual has schematics
but no alignment procedures. Thanks for looking!

*********** REPLY SEPARATOR ***********

Very interesting that the post asking to stop the arguing and whining is the longest post of all, by far. In a nutshell, that's the problem. Only your thoughts are important, only your desires are valid, what you want is primary above all.

As long as folks like you own these priceless relics, someday the last one will be reduced to scrap. What a shame.

Bill T.

Thanks for the hint, Gary but a Kenwood 7400A looks quite differently.
At least from the picture on Rigpix.

Markus

And the Head Up the Ass award goes to.... Spokesman, who complains about what other people are doing by telling them not to complain about what other people are doing.

I'm sure the award went right over his head. Someone explain it to him, please.

Bill T.

Isn't there an address somewhere on a label?  There are several
communication companies that begin with Alpha.

Who cares..... If I ever get to a point where I am senile enough to get into
a pissing contest because somebody said not to get ugly, then just shoot me.

Yes I know that but the controls are very similar. I was thinking
maybe Kenwood built it for Alpha.

Does the radio have an FCC ID number, I would not be surprised if it
did not since you are not in the US. But if it does looking at the FCC
database would give you some insight.

Thank you in advance for looking at this post.

I have been trying to get my wife interested in getting her license for years, and have finally talked her in to studying. I thought I would pick up a dual band radio to surprise her, and like an idiot I bought one from eBay. I picked the ADI AT-600 because it was inexpensive and the display was large enough for her to see.

The ad said "as is" but also said VHF and UHF bands worked. I don't mind weak batteries and a few scratches, and that's about what I expected. When I received the radio the UHF worked fine but the VHF receive was only static. The VHF transmit worked fine.

When I power the radio up, and tune the VHF to a frequency.. say 145.000, and turn another HT or base to the same frequency, I get a signal on the two other radios. About an S7 on the base. Tune the AT-600 off frequency and the other radios receive nothing. The xmit led doesn't indicate it transmitting. With the rig apart, tapping on a few selected smc caps and transistor produces tapping audio in the other receivers. (mic isn't in the same side as the tapped parts)

Transmitting from either radio to the AT-600, it doesn't receive anything.

I am going to get in to this rig and repair it, just out of principal.

A kind gentleman in in California was gracious enough to fax and mail me schematics he had for an HTX-204, which is the same radio made for Radio Shack by ADI. (One of the only references to repairs for this radio on the Internet. He was offering the schematic to someone else looking for it and was nice enough to respond to my request.. still nice guys out there..)

So my question to anyone who may have the time and possible knowledge of this radio is... after checking the grounds and obvious problems, what would be a "high probability" section to start looking at.

Again, thanks to anyone who has taken the time to read this.

Jim

Here are a couple of rules to use when buying used equipment:

1. Never buy anything that says "sold as is", even if a live purchase. The seller knows something you don't until you get your hands on it.

2. Can I buy this new and avoid headaches? You can get a dual bander Alinco, new from manufacturer for 120.00 It.s a 'lil bitty one that would have fit your wifes purse. Big selling point for the YLs.

been there, done that

A loading coil inserted in an antenna, or a close-wound helical, can be considered to be a transmission line. It behaves as such.

From a coil's physical dimensions, program TRANCOIL calculates the line's distributed Inductance, Capacitance and Resistance including radiation resistance.

Also Characteristic Impedance, Phase-shift, Propagation Velocity and Attenuation.

Should the coil be used as an antenna, the resonant frequencies are found, also the feedpoint impedance, R+jX, versus test frequency.

Input data can be varied via the keyboard to observe how the coil performs versus length, diameter, number of turns and frequency.

The program is both educational and practical.

Download program TRANCOIL in a few seconds from website below and run immediately.

The answer is still the same. If you don't want the airplane to fly then
YOU should buy it and put it on static display in your workshop.

If you don't want to buy it then let the people who are willing to
restore it use it as a flying museum.

Hi All

I am having a problem with my Kenwood 732a....I stopped working and would
not power on, their was power going to the radio but it would not turn on.

I keep on trying to turn it on by repeating the on off button and now I have
a small number 44 showing in the left side of the display and when you push
any of the buttons all it does is beep, and now the on off button won't turn
the radio off.

Any Ideas Don VE3ULF

No one is keeping YOU from gathering money for acquisition, restoration,
and floor space for a static display.

Or is it just easier for you to piss and moan about the people that are
actually doing something without any personal involvement on your part
other than your pissing and moaning?

Yet you think *you* have the right to dictate to the people that own and
pay for those craft what _they_ "should" do with their own property.

>As long as folks like you own these priceless relics, someday the last
>one will be reduced to scrap. What a shame.

Which will have absolutely *zero* effect on the number of non-flying
"relics" on static display.

Available evidence suggests (*very* strongly, too) that "more or less
NOBODY" wants to spend the money to preserve such static non-flying
display aircraft. That *those* aircraft are being 'reduced to scrap'
today, for lack of interest. "What a shame", indeed.

Not to put too fine a point on it, how much money have _you_ donated to
the support of _any_ "non-flying B-17 static display" organization?

It's always easier to spend somebody else's money, isn't it?

I suspect the appellation 'hypocrite' applies.

I take it you don't speak face-to-face with others very often?
Your low-brow approach to debate is, if nothing else, good for a chuckle.

Looks like you just enjoy arguing without reason; because you're completely
unarmed,
and going in pointless circles with your posts. Try to make a valid point,
please.

>Your temporary
> adrenaline rush is much more important, and the risk of splattering a
> priceless aircraft means nothing beside your momentary thrills. How sad
> that people like you are allowed to own such an aircraft.

LOL... four words: lost ball, high weeds.
What does your above statement even mean???

FYI: Don't EVER research the film industry for any reason.

>
> A hundred or five hundred years from now, if your ilk prevails, people
> will be saying "Gosh, I wish someone had kept a B-17G preserved
> somewhere. I would have really loved to see the real thing".

Wow...? Not sure what to say to that after reading your cumulative posts.
First, please refer to the "lost ball" statement above, then
try to do some research on vintage aircraft clubs, museums, owners and
current displays.

>
> I hope and pray there are not many like you.

Plane-loads! And no thanks to you, we sit about debating whether or not a Neanderthal with a superiority complex is a paradox.

Mister, it's painfully obvious that your intent is not to prove a point, nor offer a reasonable debate; but to simply try and talk others down.
You must have a very hollow existence.

I hope and pray you can find a better way to spend your time.

rb

This group has the most complete collection of modifications, usage tips, links to related websites, documentation, and photos along with a user survey and a message forum (4000+ messages archived) to help you get the most
fun and DX out of your Realistic / Radio Shack DX-394, DX394, DX 394.

Over 90 mods and tips now listed plus a dozen on the To Do or Wish List. More mods than for any other general coverage receiver! Thoroughly documented with a Master Index. If you like to tinker with radios, I know of no other recent model that lends itself to as much fun in this arena as the DX-394. Great platform for learning radio-electronics. Always 1 or more FA on eBay.

Active & friendly user community now with over 1000 members. Some members are
keen short wave listeners; others are into AM DXing and a few enjoy long wave. Many experiment with antennas and some are ardent modifiers - customising and souping up the rig as hot rodders would do with cars. You'll find lots to interest you and help get the most out of your radio.

All here at:

Check with your local HAM Radio Club, or your local FCC office.

Look for the radios frequency capabilities, then build and cut the antenna
for those frequencies. Its real simple math.

> 3. I know I can test the radio to see if it receives, but how can I

You can't
```

Anybody opened up one of these PWRgate devices to see what's inside?

What diodes are they using? I can't find any 80A Schottky diodes in the Mouser catalog.

Does it consist of any more than two diodes, a resistor for the float-charge capability, the connectors and the heatsink?

"Perce"

I would guess that it is 2 Schottky rectifiers back to back, with an additional resistor-diode across the pair to keep a float charge on the battery.....

The 203CNQxxx series from International rectifier comes to mind in this application, as basically it is one modual that is surface mounted...

Do a search for PWRgate, and go from there. You SHOULD be able to brew your own from the info found....

WANTED: B-17G Flying Fortress radio equipment

This is a long message... please read it all!

The Vintage Flying Museum of Fort Worth, Texas, home of B-17G N3701G, "Chuckie", is seeking DONATIONS of any kind of radio and radar equipment that would have been used aboard B-17G's built from early-1944 on.

Our airplane is a B-17G-70-VE, serial number 44-8543A. She was built in January, 1944, by the Vega division of Lockheed (B-17G's were built by Boeing, Douglas, and Vega). She was converted to a "pathfinder" model, which means she had a radar set installed in place of the ball turret which allowed bombing through overcast. Very few Forts were converted for this mission, and it is possible that our Fort saw combat time over Europe. The combat records of the pathfinder Forts are still classified, so we may never know for sure.

Right now, the only original radio gear installed in the airplane is a BC-348-P receiver and shock mount. We need everything else. Some of the specific items we seek are the BC-375-E transmitter, tuning units TU-4B through TU-10B, BC-306 antenna matching unit, the wooded tuning unit storage rack that mounts to the rear bulkhead, ceramic feedthrough insulators, power and control connectors, and cables. We're also looking for command set transmitters, receivers, racks, cables, control boxes, spline cables (the LONG ones that will reach the flight deck ceiling), modulator, and so on.

Obviously, we are looking for NICE equipment that is in display condition because we display the airplane both in the Museum and at air shows and fly-ins. We'll certainly accept donations of "parts units", but the primary focus is on acquiring gear that looks good enough to be installed in the airplane. We want to impress our tour guests at the air shows with a great looking radio room! Do you have some surplus military WW2 airborne radios stashed in your garage or attic? Would you like to see them go to a good home? Please donate your equipment to VFM and help us restore the radio compartment in our beloved B-17! Any radios and accessories that we don't use in the airplane will be either put on display in the Museum's exhibit hall or sold off to generate money to help finance the effort (no matter how much gets donated, we'll still end up having to buy some stuff to complete the job!).

We are a small museum, and we have very limited funds available to spend on things that don't actually help us to keep the airplane flying. We are looking for DONATIONS of equipment. We are a 501-c-3 tax-exempt charitable organization, and we will provide a tax receipt for your donation.

"Chuckie" is one of approximately 15 B-17s worldwide that are still in flyable condition, and one of about 10 that is flown regularly. Please don't "bash" me if my numbers are off by a plane or two; the numbers go up and down as some Forts come out of restoration and others go down for heavy maintenance or retirement. She participated in the fabuluous Thunder Over Michigan air show in 2005 in which EIGHT of the remaining B-17 population were not only present at the show, but flew together! It was the largest gathering of civilian B-17s in history, and it may never be repeated.

Please visit the Museum's web site:

http://www.vintageflyingmuseum.org

I have been authorized by the Museum to be the focal point for this effort. Please address your messages directly to me.

We're also looking for a complete chin turret if you happen to have one stashed in your barn! Actually, we will graciously accept donations of ANY B-17 parts that you might have lying around.   :)

My final request is this: If you have nothing nice to say about this effort, please say nothing. If you are not a warbird fan, if you believe our effort is a waste of time and money, if you think we're "glorifying" war, if you think operating antique warplanes is dangerous and should be outlawed, etc, etc... you're entitled to your opinion, but I respectfully ask that you keep it to yourself.

Thanks and 73,
Dean Hemphill, K5DH
Vintage Flying Museum member

I haven't tried that yet.  I usually have something to write over it,
but I did run into some thing strange.  Some how I managed to get the
"beep" turned on so every time I'd key it it'd send out a beep.  No
matter what I tried I couldn't ge tit to quite.  I need to download
the comander software.

Don't you have to mask the memories rather than erase? That's how it is on
my vx5 and vx6.

That's why I was asking. But why were you suggesting 200A diodes? I find that Newark has the 80A International Rectifier ones (and 80A is what WMR says is the rating of the diodes they are using) in stock, cheaper, and with a lower voltage drop. (I guess that Mouser for some reason simply doesn't handle IR products.)

Up to this point I agree with everything you have to say.

But I'll say what I please about your efforts, and defend to the death the right of others to say it, as well.

You don't have to like it, and you don't have to read it, either, but everyone else is as entitled to state his, her, or its opinions on old warbirds as you are.

That said, I hope you're successful in your quest.

*********** REPLY SEPARATOR ***********

I'm appalled to see your group is flying this priceless airplane.
Sooner or later someone will crack it up and there will be one less for
future generations to see. Please put pressure on your group to ground
it permanently and preserve it forever so out great-great grandchildren
and all future generations can have the opportunity to see the real
thing and not some replica.

73, Bill W6WRT

Did you try "Basic Setup:9"? That sets the key beep.

I haven't tried that on my VX-7R, but I think that all the radio does is
skip over them when one, for example, scans through the memories.

By comparison, my FT-2800M base unit allows me to clear a specific
memory and then reprogram it later, if I wish. I've done that several
times when I programmed it for some of the repeaters in my local area.

Bzzzt, Wrong, would you like to try again for what is behind Door #3...

In the USofA, there hasn't been a requirement for Licensed Techs, for

at least 10 years, in Part 90 radio systems. The only Licensed Tech
requirments left in the USofA is for Part 80 (Marine) and Part 87
(Aircraft) Radio systems, and this is due to International Agreements
that the USofA is signitory.

It's not the current rating, its the way you would mount the diodes, I just like
the idea of it being easier to isolate the circuit from the heatsink.... I
believe it's just a bit safer....

In a nutshell it boils down to demand. Do you still drive a non-air conditioned, stickshift, non power steering, non power brake car? Right. Few other people do, either! If you had a choice for driving a 100 mile trip which would you choose, a 2006 Impala or a 1931 Model A Ford? Not trying to be a smart aleck, but it answers the question! :) People just don't want that anymore. Same applies to ham radios. I MUCH prefer my IC-706 MKIIG's to the old 85 lb transmitters and receivers of yore!

Unreal...... Lemme guess, you collect boatanchors, restore them, then refuse
to power them up?
Someone once told me ham radio is a 'condition', not a hobby. I'm starting
to think he was right.

Wow that hit the mark Jerry
I might add if you want a TS-130S kind radio -- buy a used one, have it restored if need be.
My experience with Hams is the young ones (computer savvy) have no problem with programming and menus, but lots of old timers seem to.

--
CL -- I doubt, therefore I might be !

Also, if you looked at the data sheet, at 80PIV 100A, the maximum vdrop is .7v
with .5v as the threshhold voltage...

Yes, but he has a point. Our cars have had those features since the fifties. Ham radio on the other hand, has gone crazy with the bells and whistles since that time. Just look at radios like the Icom 7800 and the Yaesu FT DX 9000MP ($12,000 for crying out loud.) I'll bet people who owns these things don't use half the knobs and buttons. The owner of a new Impala would probably use everything on the car.

There are two transmission lines in cascade plus a load impedance.

The first line can be considered to be the main line from the transmitter.

The second line can be considered to be an impedance matching transformer between the first line and the antenna.

What is the impedance and length of line in the transformer if the antenna feedpoint impedance is not purely resistive?

What are the input impedances of the two lines, R+jX ?

What percentage of transmitter power is dissipated in the two lines?
What is the overall power efficiency?

The answers can be found in new program TWOLINES.

SWR is not involved.

Download program TWOLINES from website below in a few seconds and run
immediately.

So; if they don't fly it, don't keep it airworthy, what if a hurricane
comes along, does it just sit and wait to be ripped to shreds? More
power to them, if they fix it they should fly it. I know of a collector
of fine rare cars, he isn't  afraid to send them off to vintage races or
put them on the road.  I am also amazed how collectors rebuild from
almost zero remains, so even if it gets busted up...

I'm appalled to see your group is flying this priceless airplane.
Sooner or later someone will crack it up and there will be one less for
future generations to see. Please put pressure on your group to ground
it permanently and preserve it forever so out great-great grandchildren
and all future generations can have the opportunity to see the real
thing and not some replica.

73, Bill W6WRT

Does anyone know the crystal scheme for lo-band Ritron handhelds? These are older radios, shaped like a brick, 4 position frequency selector switch on bottom right. FCC ID AIE9QZRTE-054. The radios are currently crystalled for 49.22 xmt and 48.60 rec. I'd like to put them on the 6M band.
TIA

The only thing you have to have "original" on an aircraft is the data plate.
Everything else can be salvage, new parts, homebuilt parts, whatever.  The
data plate is the key.

I have a like new condition Mosley Classic 33 HF Beam for sale. It the late model CL-33-M and currently sells for $650 from Mosley. It has great gain on 20, 15, and 10 meters. It has a 18 foot boom.This one was up for a little over a year and looks brand new. It has been taken down and is partially disassembled. It would be very easy to put it back together again since all pieces are color coded. It also would fit into a pickup truck for transportation. The price is $300 picked up. I don't want to ship it. Or I can meet someone within 100 miles of Abilene, Texas.
Thanks, Charlie Hugg, K5MBX

Almost looks like a Kenwood 7400A with a different front panel, the
controls are similar. Kenwood did make products for other companies.

I was sitting on the phone at Icom when the original 706 did not receive the weather channel very well. I can tell you the hams would not have it that way. I can remember hearing over and over an amateur transceiver that works in the 2 meter VHF range just has to be able to reveice the weather channel otherwise it was useless. Take the W32A, receives the weather channel like gang busters on the supplied rubber duck, it was done by design.

Someone came up with a as I remember the " Yellow " wire mod for the original 706. That mod actually enabled the 2 meter bandpass filter when tuning above 148 MHz where it was turned off stock form the factory.

Seems today's amateurs want a amateur transceiver and one that has a wide receive too. I have often wondered how many rigs would be sold if one could not alter the transmit range. Both seem to be pretty standard on the check lists when purchasing a new rig.

I purchased a brand new IC-730 in 1982 at Dayton. Then I longed for shortwave coverage and 10 FM. I did find an aftermarket FM board for it from a person at Dayton the next year or two It worked great.
So with a quadruple conversion receiver I was not real happy as I could not tune the shortwave bands. I now have an IC-718 and hardly ever tune outside of the ham bands now that I can. :)

I agree if the companies could build a nice helical filtered ham band only front ends the overload and adjcent channel complaints would go away mostly.

Its an interesting hobby and also to listen what users seem to want in a radio.

Thanks for the memories.

What're you doing, Charlie, getting out of the ham business?  Are you
planning to be in Abilene at the end of July?  If so I'd like to meet up
with you.  I'll be there for the 774th TAS re-union, celebrating (?) the
20th anniversary of the deactivation of the squadron.  I was there from
'79 - Jan '85 and had some great times there.  Member of the KCARC, and
all that.  If you still have the MC-50 when I get there I might be
interested in relieving you of it.

An airplane that is not flown is so much scrap metal. They were designed
and built to be flown and in the air is where they belong. If someone wants
a static display let them build a replica.

Add to that the fact that this 'priceless airplane' is only such
*because* this group invested heavily in its existence.  Without their
contribution of time, effort, money and hardship, it would--in
fact--(still) be only so much scrap metal.

Y'all don't suppose that Bill posted his little rebuttal simply
because the OP politely asked him not to?  Something about "stirring the pot"
comes to mind.

> For crying out loud Mike, was that TRULY necessary?

I think it was. Usenet is in many ways the equivalent of Speakers'
Corner in Hyde Park, London. omeone trying to foreclose comment on
his project, after he posts about it on Usenet, is in the position
of telling the folks around him at Speakers' Corner that they can
listen or not, aas they please, but they aren't to comment.

I've been doing this Usenet stuff, for work (mostly) and play since
1983 or so, well before hoi polloi had access to the big-I Internet,
and I want to keep its open flavor intact.

You have the right to have a different opinion, and (unlike k5dh), I
won't ask you to keep it to yourself.

Get real, rb. If someone powers up a boatanchor, it will never end up splattered all over a hillside somewhere. Get it?

No, Bill posted his little rebuttal because he thinks the OP is an idiot but hopes he will come to his senses anyway.

Throughout history there have been many irreplaceable treasures lost because nobody thought future generations would might like to see the original instead of a replica. A real, genuine B-17 is a priceless relic of an age that will never be repeated. Save it.

Mr Bill

Well, I am sorry to hear that Bill.  You obviously aren't familiar
with the major causes of loss in restorable antique aircraft:

(In approximate order)

1) lack of people willing to pay for restoration
2) hanger fires
3) natural disasters.

I have seen a few rare aircraft that have crashed, and guess what?
As soon as they get the pilot out, they go back into restoration.

There seems to be loads of money available to restore antique aircraft
to flight, but little available for restoration to static display.

And in my opinion, that is exactly how it should be.  Whoever pays
the freight gets to decide how the plane is used.  Everyone else
is just a spectator.

-Chuck

If you feel that way you should purchase them and put them in a museum.
Most would not have survived and will not survive without the intent to fly.
Not much money available for the restoration of static displays. Lotsa
money available for flying restorations. Glaicer girl is an excellent
example.

Heh, I'm as real as it gets, brother.
So you do collect boatanchors? Do you also have an attic full of empty radio

boxes? I'm betting you do.
But that's your choice, now isn't it? And nothing wrong with it.

On the power-up thing,
I disagree, citing that it depends on how much power is applied to it.....
:-)
Or it could catch fire and burn to the desk... or the ground... or if it
were donated to a B-17 restoration, it could very
well end up splattered all over a hillside somewhere... LOL.

And yes, *I* get it.... enjoy what you have or what's the sense in having
it??
Moth-ball a vintage plane in Tucson, AZ or some museum, and I'll NEVER get
to see it. Fly it to my local fly-in and I do...
[said while gazing up at the photo of my daughter sitting left-seat in the
Texas Raiders 17g when it was HERE at a fly-in.]

Everything is disposable and it certainly doesn't transgress to the 'other
side'.

Use it or lose it; 'cuz cars are for driving, radios are for driveling into,
and an aircraft is for flying.

There's a fine line between being a
keep-the-box-because-it-matters-to-other-boxkeepers packrat, and preserving
history.

Do *you* get it??
rb

Wow... didn't realize the scope of this...
In that case, it seems there are plenty of people here who think you are an
idiot also.
So agree to disagree and be done with it.
rb

And the Memphis Belle is an example of a static display going down the tubes.
Still not finished and now moved to Dayton, the US Air Force museum due to
lack of funds to keep the Belle in condition. Those machines were meant to
fly and should be flown. It's really sad to see them rot away on the ground.
In the air they are living history, and give peole a chance to experience the
ground pounding thunder of their mighty engines as they soar overhead. And
very ocaisonally one may get the opportunity to fly in one of them if they
are very lucky as a friend of mine did a few years ago in one of the last
Lancaster bombers left flying.

*********** REPLY SEPARATOR ***********

Absolutely, I get it.

You and the two or three posters who agree with you are self-centered pigs who care nothing about preserving history. Your temporary adrenaline rush is much more important, and the risk of splattering a priceless aircraft means nothing beside your momentary thrills. How sad that people like you are allowed to own such an aircraft.

A hundred or five hundred years from now, if your ilk prevails, people will be saying "Gosh, I wish someone had kept a B-17G preserved somewhere. I would have really loved to see the real thing".

I hope and pray there are not many like you.

Bill T.

Exactly! You're grouped with the left coasters!

You forgot to miss-spell a few words that time, markie-tard.

You're slipping again.

I'm looking for the microphone extension for the STANDARD C5718DA mobile dual band radio. This is the model with the display and all the controls in the microphone.

What I need is the extension cable so I can mount the radio in the trunk.

The cables I need are (any will do):

CAW571
CAW572
CAW578

I would even settle for the CAW570, which is a microphone "y-adapter" cable which allows you to hook 2 microphones to this radio. I could use those connectors and make my own extension cable.

BTW, does anyone know what type of connectors that STANDARD used? It is not the common 8-pin microphone connector.

Thank you!

martyd{AT}comcast{DOT}net

I don't but there are lots of those torrents on one large torrent site.

Email me direct for the site.

Um, Dah!.. that's a given.. Of course I read all about solder paste and hot air guns and ovens. But each of them take it for granted that you have a ckt board to solder the chip.. But as we know, breadboarding is for hand wiring while you build up your project. It looks to me like the days of breadboarding is just about dead. If I had a cktboard to solder the chips to, it would mean it was someone else's design and I'm then just a kit builder. This hobby has a lot of facets to it. ckt development and experimenting is what kept me going all these year. But to me, it looks like the deck is stacked for us old guys and Ham Radio in general. We will all soon be appliance operators.. Toasters with microphones!

Sure, BUT there ARE ckt board to adapt TSSOP to standard 8-40 pin dips for use
in breadboarding a circuit... 8-)

A new version of APRSPoint is released, new features include,

1. Implemented APRS server filter setting,
2. Enabled auto connect for TCP connection,
3. Customization of track line width and style,

and numerous other fixes and enhancements. Please visit http://www.aprspoint.com for details of this new release and sale.
Thanks.

I assume you are talking about the pencil type irons. If so, you can
put the point in a drill and carefully sand or file the diameter down.
Of course, without the copper coating, the point won't last as long but
this is a quick and dirty way to achieve what you desire.

Standard CSA-181A   Rapid Charger - desktop charger. Charges in 1 to 2
hrs, w/Automatic switching to safe trickle charge mode. This charger can be
used with several batteries. I used it with my
Standard C-168A HT Batteries. It has the Type 2 Insert for those type
batteries. I understand that other Inserts can be used so that it can charge
other Standard, ADI, and JRC Batteries such as CNB-151,152,153,162,163, &
ADI-600 packs. But this charger includes only the one Insert. Price is $40
shipped.   Thanks,
Charlie Hugg, K5MBX

You may try contacting Matt Adrian at sarts@qtm.net. He still repairs
Standards.

I do not know about the C5718A, but I have 3 C5900's and the mike
connector on them is a garden variety RJ45 modular connector.

Andy

Hi,

I am looking for an Alpha Linear amplifier. I have contacted the
factory they can supply a new model 99 in 4 weeks.

Can you seen any problems in buying the 89 available on eBay
(5881107129) or do you think that I am best to buy a new from the
factory ?

I have heard that these older series have better, EIMAC, tubes.Is that
correct ?

Thank you for all your help in this matter.

73 de John VE3XRY

Got one.......
Now if I could only *see* that little bitty stuff again....I hate getting old.

Hi Peter

I did some searching and came up with these results.

http://www.qsl.net/ke4mob/
http://www.mods.dk/index.php?ListManuals=mfj
With mods.dk register for a free subscription. The 1278 manual they
have does not show the schematic but is a 407 page (1.806kb pdf)
manual.
Not sure if this will help.

Richard

Belden made this cordset in two versions, 17280 & 17952. This is from the 1979 Belden catalog. They differ in which pin goes to line and neutral. ECM-280 & ECM-952 from http://www.electri-cord.com/product.html are supposed to be the replacement for the Belden cables.

Mouser lists the Belden 17952 as non stocked item, # 566-17952, but has
a $5.75 price for single quantities:
<http://www.mouser.com/index.cfm?
&handler=data.listcategory&D=*56617952*&terms=566-17952&Ntt=*56617952*&Dk=1&Ns=SField&N=0&crc=true>

<http://www.electronicsurplus.com/commerce/catalog/product.jsp?
product_id=77332&czuid=1125471856053>
is a surplus dealer, showing 13 in stock.

I had one, and sold it because the display did not have enough contrast
to see in a car on a sunny day. It�s basically a solid radio, but only
if you intend to use it as a base station.

OTOH, I have a "lifetime supply" of male, panel mount IEC
style power connectors if anybody is as anal as I am and
converting their old equipment power cordage to current
standards. (Just so I don't have to deal with those old
standard cords, etc.)

my original therad was totally hi jacked

a topic of , how to get a simple /cheep hf rig is completely different
and should be a completely new topic it's interesting topic but needs a
new thread

thanks to the single person who offered a heads up saying that kenwood
was going to perhaps a d star

i wonder if anyone has any links to any preview shots of it or spec
page??

tnx

I have some, too, for the aformentioned project.... but I have decided I'd rather not hassle with the replacment in this case, even though its a better idea.

Ed

```

The 410C replaced the 410B and was eventually the last VTVM ever produced by hp. This one comes with the optional AC probe. The probe has a vacuum diode inside it's body - it will warm-up you hand. The amplifier is feedback stabilized, so the pointer shows absolutely no swing when applying a signal. The Model 410C is an extremely versatile general-purpose instrument for use
anywhere electrical measurements are made. The Specs are below:

AC Response 20Hz to 700MHz
Output 1V f.s.
Power 13 watts
Dimensions 6-1/2" x 5-1/8" x 11"
Weight 8 lbs (4 kg)
Technology tube, transistor
Price (for 1968) $ 425 w/ AC probe

My price for this one is $125. It is in great shape. I can send digital pictures. Thanks, Charlie Hugg, K5MBX

You're not supposed to be able to see it even when young.

We have a spiffy binocular zoom microscope on almost every bench at
work.

I''ve pretty much given up on building hobby projects though - don't
have the right tools at home, don't have time to use the right tools at
work.

FS: Drake TR-4Cw/rit + AC-4 + MS-4 combo

The TR-4CW/rit was one of the last off the line, serial no. 45311, and has the hard-to-find 34-PNB noise blanker installed, which I've seen go separately for $200. It is extremely clean, a conservative 9+. Flawless front panel except for one 1/8" scratch below the RIT button. Cabinet top is perfect. Both sides are perfect except for one very small scratch on the left side. Chassis is clean, no corrosion, no smoke deposits. No evidence of modification. Two extra crystals are installed for full 10M coverage.

The AC-4 power supply is installed inside the MS-4 speaker cabinet. The MS-4 has a few superficial scratches on top. The front grille is perfect.
Interconnect cables and repro manual included.

Make serious offer
Ready to sell.

Hello, I have for sale a mint IC-910 radio. It was used mostly on the
satellites. It is like new and in a non smoking enviroment. It comes
with the standard hand mic, power cable and manual. If you have any
questions or would like a picture please email me. The price is $950
plus $20 for shipping. Thanks, Mike

Now if we can get him to punctuate them into meaningful sentences?

Hello

I went to a local auction where a hardware store and small engine repair business went out of business. I came home with boxes of small odds and ends. One box had what I thought was a CB radio, but it turned out to be a Uniden SMU 300K commercial radio. I have been googling around trying to find out some info on it, but out of about 40 hits on google, with well over half of them being outdated Ebay ads, (I sure wish Google would remove outdated junk), I only found one site with a small photo of one, and no further info.

This is the same radio, as the photo I found.

Anyhow, I am not very familiar with commercial radios. I do know quite a lot about CB though, so I know this is similar except the frequency.

What I am trying to find out are a few things. What is these radios used for?   I mean what is the band they use, like is is police, fire, business only, or what? Several of those obsolete Ebay ads said in the description they are a UHF 450-470 MHz Mobile Radio (another said 440 - 470mhz.

My next question is legality. Can I legally transmit, or do I need some sort of license? If I do need one, can I test it without a license just for a few minutes?
(I am a farmer, live out in the boonies, so there is not much radio activity around here). I have a police scanner so I should be able to hear myself. But before I do all of that, I will need the right antenna. I got several CB antennas but I know that is way off on the wavelength. I imagine for listening, I can use one just to try it, but not to transmit.

I am just asking all of this first. I have not powered it up yet, and for all I know, it could be dead, although it is clean and complete. I dont want to blow it up so i am asking about it first. I also dont want to buy an antenna or get a license or anything until I know it works.

One other thing. I dont see any holes for a speaker. Does the sound come out of the mic, or what? On the rear there are only the red and black power wires, the antenna connector, and a square plug with a jumper wire.

All help appreciated.

Thanks

George

     At this hour?  At home in bed, I presume.

> and why do you violatethe Tos of Google

     So far, I haven't.  Why do you suggest I do?

     You see, Mork, I can call you an idiot, a fool, a liar, a deviate,
a coward, and a cheat in this forum because at one time or another
you've proven all of them to be true.

     It's not a "violation" if it's true.

Steve, K4YZ

I'm looking for information about a VHF radio of the 'Alpha' brand.

I've got a picture, but no further info.
http://www.markus.org/404779521.jpg

A local HAM wants to sell it and I might be interested.

Thanks  Markus HB9VCD

> Sorry guys.  The spam stuff was not my intent.
Yes it was, your header is still the same, and you've now re-spammed every
newsgroup again with your 'apology'. It doesn't get any dumber.

> I have never been on newsgroups before and not sure how to
> work them.
Yet you know how to spam them. Did you also learn to run before you could
walk?

> I hope you guys can forgive a bad choice.

YES you will need a license before you can transmit, NO a CB antenna won't work, YES you will need to know what frequency and cut the antenna to the correct resonant length, YES it will most likley have to be modified to operate in the ham bands once you are licensed to do so, NO I can't tell you any more without actually *seeing* the radio, or the book for it.

Hi Peter

I have the 1278B schems. in the back of my manual. There are 5 pages in all. Will scan them in and email them to you or post them on a binary news group. That won't be 'till much later today though.

73s

Thanks for the reply.
three questions come from this.
1. Where or how does a person get a license?
2. What do I look for to get an antenna, is this something I can get a
Radio Shack, or what?
3. I know I can test the radio to see if it receives, but how can I
test to see if it transmits? (without getting a license first)?
[I mean, is there a place that will do this, or can I have another
person who has a license do it, or what? I noticed there is a local
business that uses this frequency range, can I have someone there test
it for me?

Thanks

Wind a coil like the original, but add two additional windings. You may also need to add a little parallel capacitance (100,300 or 300 uuf) to the load variable cap. Tune the input to 50 ohms. You may have to compress or expand the coil a little.

Should work...

Win

which does not alter the fact you just lied

which you clai you never ever do

maening that is lie

you lie constantly

you rationalize it a joking or sarcasm but you just prove that you are
untruhful

Cool, I'll just use my 667-V on 430 amateur television.
That will save me mucho bux!

Why would you want to? A good 6M AMp is worth far more than a good buddy
amp. Hell, if it's in good working condition, I'd trade a 250 Watt Solid
State good buddy amp for it in a heartbeat!

     Forget it, Scott...Morkie is drawing welfare for a "disability",
and any demonstration that he can do something to overcome his
"disability" means he'd have to come off welfare and get a real job.

     He DOES claim an IQ of 248, though...Makes ya wonder what all that
"MENSA" silliness is about with intellects like Morkie, doesn't
it...?!?!

     Sure you can use a spellchecker and post here.

     You've only been provided two dozen different ways to do it.

> but stev was and is still lying so you had nt point related to materail

     No, I was not lying.

     And I am not lying about your "disability".  To idiot and moron we
add thief and fraud.

Steve, K4YZ

Steve,

Even with all of the advances in medical science, they still can't do
anything about ignorance or dain brammage. Best to killfile the troll and
move on.

For those of you just getting to know "Mark Morgan, KB9RQZ" via his spamming and cross-posting of RRAP and other "rec.radio" groups, a little intro is due.

Mark started in here about 8 years ago with his functionally illiterate diatribes, mostly trying to get support for his "waivers" for Morse Code due to alleged neurological deficits, among which he alledges being "dyslexic".

The problem is Morkie tried to get an allergist to write his "waiver" for him. After having claimed an IQ of over 240, one has to wonder on what two fingers he added that up on. It was suggested he see a neurologist, but like every attempt to help him, he told those who suggested it to get ####ed.

On finding out that I was an enlisted retiree from the USMC, Morkie started in on tales of how >>>HE<<< was not only an officer, but a COLONEL in the US Army "chemical corps", and that he was DRAFTED ta-boot!...As if that meant a rat's pack of snot in this forum!

Of course Morkie didn't count on anyone actually being able to do math better than he...You see, based upon his birthday (which was once in QRZ), Morkie would have only been SEVEN years old when the drafted ENDED in the United States...

Anyone seeing a pattern here?

When he was busted with this fact, he then relented and "admitted" that he was "only" a lieutenant, but that his unit CO wouldn't let him resign even though he's an admitted sexual deviate. Of course he's since changed even THAT story, and he now tells a tale of how he was an enlisted clerk in the Army, discharged for emotional problems.

Yeah...Right. A "clerk" who can't even SPELL "clerk"... ! ! ! !

Over the past several years, Morkie has alternatively denied being a mental health patient, then admitted that he's being treated for "anger issues". He's also lied about being in trouble with the law...You see, Markie likes to "care" for his elderly father by taking advantage of him, then skirting the law. It's been a close shave.

Now Morkie's moved from his previous QTH in south-central Illinois to the Michigan Upper Penninsula in order to (A) avoid the aforementioned abuse issues, and to (B) take advantage of more lenient welfare laws that allow him to pork out at home while allowing you and I to "earn" his income for him.

Among his many NG credits are his claims of being stalked, his admission (and only redeeming attribute) that he not only lies, but does so without moral reservation, and that he believes that children should be TAUGHT to lie.

Morkie now "claims" to be married, but can't seem to produce any evidence of it, other than to point to the recent licensure of a female-sounding named person who shares his POB in Chassell, Michigan.

Oh yeah...His "wife"...Allegedly a law clerk or paralegal of some sort, they were allegedly married in Israel. No doubt a green card scam if they are indeed "married". Obviously she doesn't care enough about him to take his name, even to have it hyphenated with hers.

So ...for those of you just tuning in, sit back and enjoy the flailings of Mark C. "I Am A Drafted Gay Pagen Chemical Corps Officer" Morgan.

He never disappoints!

73

>

when you threatened to murder me yes I stung some stuff together that
did devirt your attention for a time in those I did not know you
nothing but a lying windbag
>      Of course Morkie didn't count on anyone actually being able to do
> math better than he...You see, based upon his birthday (which was once
```

> ENDED in the United States...

stave that was a result of misreading my cliams and GiGo it was most
entertaining

>
>   Over the past several years, Morkie has alternatively denied being
> a mental health patient, then admitted that he's being treated for
> "anger issues".
another lie

I never said I was being treated for anything anger issues or not
>He's also lied about being in trouble with the
> law..
where?

never been in trouble with law, except the occional speeding ticket

Now Steve did falsely alleg I was abusing my Old man, and it was
investagted and I was cleared
>.You see, Markie likes to "care" for his elderly father by taking
> advantage of him, then skirting the law. It's been a close shave.

hardly
>
>   Now Morkie's moved from his previous QTH in south-central Illinois

Illiopis township includes the exact center of the state of Illinois by
some measure (by others a neighorring township does bu steve never lets
facts interfer in his lies)
> to the Michigan Upper Penninsula in order to (A) avoid the
> aforementioned abuse issues, and to
really? that is news to me
>(B) take advantage of more lenient
> welfare laws that allow him to pork out at home while allowing you and
> I to "earn" his income for him.

no wlefare income either

just steve string togther a series of lies
>
>   Among his many NG credits are his claims of being stalked, his
> admission (and only redeeming attribute) that he not only lies, but
> does so without moral reservation, and that he believes that children
> should be TAUGHT to lie.

yes indeed I do belive that all person should lie in the right
circumstance

Steve reported me to child abuse authorities and they agreed ..with me
obviously
>

```
>      Morkie now "claims" to be married, but can't seem to produce any

what prove do you desire?
>
>     Oh yeah...His "wife"...Allegedly a law clerk or paralegal of some
> sort, they were allegedly married in Israel.
what is the problem with that?

are you antisemitic as well?
> No doubt a green card
> scam if they are indeed "married".
no doubt in your mind, but reality is different

she as well as myself are US citizens we choose to travelto Isreal for
our Marriage and Honeymoon
> Obviously she doesn't care enough
> about him to take his name, even to have it hyphenated with hers.

well I thank you one her behalf for once calling her a she rather than
a he

but we simply choose to live our lives as we see fit without consulting
the likes of Robeson

and indeed there we have the one "crime" I am guilty of, being
different something that Robeson can't stand for in even the slightest
degree... and I do far beyond the slightest degree I admit
>
>     So ...for those of you just tuning in, sit back and enjoy the
> flailings of Mark C. "I Am A Drafted Gay Pagen Chemical Corps Officer"
> Morgan.

again with sexauly based attack Robeson claims he never makes but
>

he can't

he is so afraid of me that he must reatin the abilty to follow my every word and denouce what he sees as my shortcomings (some real some just the result of fevered imagination) to world

you see steve is afriad of bisexual people

science the most likely reason is that steve has problem with represed bisexaul urges

so steve can't kill fill me, bt he can't tstlak my every word over the net

he also likes to pretend he eye on the ground amoug the good citizens up here in MI

when it pleases me sure but this is hardly the right place for that
discusion

you like steve think you have the right to control other people private
lives

or to stalk and black mail people with thing wether they are
emabrrasihed about themm or not

but you porve your are afraid of bisexaul folks steve just like steve

strange to you fine I agree
but why do you care?

why is a proper topic for RADIO NG's

I bet I get no real answer to that
```

Id be happy to never discuss the matter in radio gruop if children like
you and the other steve and Dave and few others wanted to talk about
.....
GASSP .....radio

but you still porve you are a zenophobe just like Robeson, threatened
by my mere existance plus the facts I am not ahomsed of my private
life. I do wish people had the good manners to leave it private but
that you and others are uncivilized barbarians is not my doing

Amps, whether certified or not will end up as they always do,,,,,,used on
11 meter and the freeband in addition to the hammie bands, regardless
of what the FCC does or doesn't do.

Haven't had much luck on triple five lately,,,you been sandbaggin there lately? Most of my action has come from ssb recently. Send me an email and let me know next time you're working some dx near Dixie. Take it light and try to fly under the radar.

I have a brand new in the box Spi-Ro Trap Dipole Antenna, Model D-56
Professional Series. It sells new

for $152.95. Type Spi-Po Antenna into Google and it will take you to their
Webpage.
This antenna has 6 traps and is 82 feet long. It handle up to 600 watts. It
covers 10, 15, 20, 40, and 80 meters. I have the original instructions. It
has never been out of the box or plastic shipping bag.
Price is $92.95 and I will pay shipping in the lower 48. Thanks,
Charlie Hugg, K5MBX

Very entertaining... Sorry, I don't have the time to play.....my time is
just too valuable to waste on long running pissing contests.
I am just now getting home for lunch... still have a couple more $ervice
call$ to do after I go to the supply house.... booked up for tomorrow and
most of next week too.

I really don't care, except you act like a fool in a public place and cross
post it.

the fag is forging

A little perspective on our latest outed resident freak

http://groups.google.com/group/alt.fashion/msg/564b8de113eb0531?dmode=3Dso=
urce
=A0

His pic was on his homepage http://hometown.aol.com/programbo5/index.htm
but he yanked it after the url was posted today.
He was too slow. Here's the pic he had up.

FS: Ameritron AL-82 Amplifier
The 3-500ZG tubes were replaced
with new tubes
about three months ago.
Works GREAT!! Legal Limit.
Price: 1000.00   Plus shipping
I would drop it off at UPS store for them
to properly pack it, or you can pick it up in NJ
I have a picture if you send me an email.

I picked up a Simpson 464 Series 3 DVM sans Test Leads. They are the
Reverse Banana Plug style.
Anyone know where I can find a set ?
Google is no help.

Thanks, Dick, W1KSZ

How much would you want for it, instead of converting it? I operate 6 meters and could use it.

Did you try Simpson?  Otherwise, probably any instrument manufacturer
could help.

It seems these days every chip I want to use in anything is only valuable in TSSOP format. The leads are so small my smallest soldering iron covers three pins at a time. It's hopeless.
Does anyone have any words of experience here?

> Something tells me that's the smallest thing going up his ass tonight.

I wouldn't want to drive my Jeep in there. I might get bogged down in the mud!

Radio, lets see, echolink (AM) or skype (FM) with video tonight...
My biggest complaint about echolink is that all the calls with a
3 in them are grouped together, even if the 3 call is not in 3 land.
There needs to be an update that allows one to designate which area
they're really in. I can't stand seeing FL, CA and HI and can't find
the ones that have moved here and kept their 2 or 9 call.

Take a walk on the wild side....
Go to your local electrical, or HVAC supply house.

can you tell the truth?

it seem not

no intentional spalling on my part exist in the NG's I simply don't
bother to look for them again if you want to iill file me go ahead
```

aut robesoncan't he stuck like pavlovs dog he has to knwo what I type

> Jamming some Credence over here..radio off.

I've got some audience cassette masters from Merriweather Post over here
that need to be captured as 16 bit stereo waves, chopped with CDWAV and
then compressed to FLAC and torrented.

West,
I noticed the same and cannot begin to fathom it myself. In my case I
went for the earbud/lapel mic because it suits my purposes best. For
another HT that I've used the Premier SPM102 (for Kenwood it's the
SPM101) and found it a tad larger than the average speaker mic however
it will handle high volume well and the sound quality is decent.
These run about $32 at AES - which ironically is within a couple
dollars of the price for the Kenwood SMC-34. It could be that the
volume sold of that model has been sufficient to write off development
and ammortize tooling costs so that's why it cost less.......guess
we'll never really know until someone from Kenwood steps up and
publically answers the question.

Howard

I guess that's the reason I bought the SMC-34. Of course I also
wanted the volume control. I looked at the brochures for all three,
and can't see any reason why. Only the Shadow knows.

Lowes Hardware stores carry a good sturdy one.... both 3 and 4
section models, I believe.

Gidday All,
this Posting to advise I have several of these
fantastic High Power (35 Watts typical Output) Linear (All Mode)
Amplifiers available For Sale.

See my eBay Listing.. simply Search on "1296 Mhz"
These Amps can also be provided with a 1265 Mhz "tune" to suit ATV
frequencies !

Additional information can also be found on my Website as per below.

Questions : Email me direct. I will gladly provide more information.

Cheers & thank you.

Alan - VK3XPD.

Funny I should read this post tonight...I was just talking about my old ten meter handheld with my wife; sold it years ago and wish I still had it today. It was an AEA DX Handy. It operated both SSB and CW and offered about 50 Khz (if I remember correctly) coverage each in two places on the ten meter band. It used a couple of crystals swung the frequency about them a bit. It put out 1 1/2 watts of RF. I worked my first HF contact with one of these....Cincinnati to Salt Lake City (but cheated and was feeding the RF into a low dipole). My favorite contact was operating the rig "stock"...built in telescoping antenna, trailling a counterpoise behind me. I was stand in the parking lot of a local grocery store and worked and East German station on the day the wall came down. Unforgettable experience! These radios are kinda rare now, although they were also marketed in Japan under another name (Mizuno?) The Japanese company was the actual manufacturer of the radio. There was also a version made for 6 meters.

The Icom IC718 can be bought new from AES for $549. It's a pretty basic
radio with not very many buttons. The Alinco DX77T is about $150.00 more.

Bingo! If I want a basic radio, I can go to a flea market and pick up some nice simple stuff. When I buy a new radio, I want features and good ergonomics to go along with them. That is what the market has turned into.

At Dayton last year, I picked up a 80 and 40 meter version of the Single Sidebanders for 20 bucks for one, and 25 for the other. Both

worked fine. Just about any kid would have the money for that. Wasn't
State of the art, but 200 watts on SSB, and a cheap wire antenna can get
a person on the air CHEAP!

Now that is sad, a Yahoo group for junk.

I've got a JT308, paid 30quid for it, wished i'd paid a bit more for a real used 70cm HH

It's ergonomics are the worst i've ever used,
and it's chin/lish manual needs an interpreter

But OK for a cheap PMR set which only needs setting up channel and tones once

What more needs to be said

Steve Terry

I just paid AU$17 for a new 308. Thats about 7 UK pounds. So its not perfect. So what :o)

> and it's chin/lish manual needs an interpreter

I love the manual. Its brilliant. Hilarious.

Does anyone have a source for a PDF of the ICOM IC-229H transceiver schematic? The ICOM site no longer has this on ther site and I can't find my maintenance manual (if I ever had one).

What I need to know is if there is a bias resistor feeding some positive voltage to the mike audio pin (pin 1) of the microphone connector.

WTIA

Agreed, if i had a flat bed scanner i'd PDF a copy for all to see.
Anyone with one like to do that, it's quite something.

A quick Google on IC-229 turned up

http://members.tripod.com/~Malzev/cb-funk/ic-229.htm

and there's a PDF scan of the schematic.

> What I need to know is if there is a bias resistor feeding some

It looks so, based on the schematic cited above. From an 8-volt
supply there is a 100-ohm decoupling resistor, followed by some
electrolytic and other power-supply bypassing to ground. From this
bypassed supply voltage, a 1k resistor R7 is connected to the MIC
line. This same junction then goes through a DC-blocking cap C135 and
thence to the source of a JFET Q2.

So, I think you'll find roughly 8 volts DC sitting on pin 1, when
measured with reference to the microphone ground-return MICE on pin 7.
Short-circuit current to ground would be approx 8 mA.

THat's what I needed, Dave. I will be using the IC-229H microhone
with another radio (Elecraft K2) and I needed to make sure that a
bias resistor was needed,

Many thanks.

>The way I do it is as follows ;

Remove all switches, knobs, dials ect.
Then remove the front cover (sometimes you may need to remove locking nuts
ect to release the cover completely).
Then it's just a matter of cleaning every nook and cranny with a solution of
WARM water and washing-up liquid in a CLEAN plastic bowl.
Dry and set a side until all moisture has evaporated then re-assembly.
It's best not to use any other cleaning agents I find.
You may want to take a look at items that may require lubrication while you
have the front panel removed.
Hope this helps..................cheers, Ken, G4KIR.

I have a like new condition Mosley Classic 33 HF Beam for sale. It the late
model CL-33-M and currently sells for $650 from Mosley. It has great gain on
20, 15, and 10 meters. It has a 18 foot boom.This one
was up for a little over a year and looks brand new. It has been taken down
and is partially disassembled. It would be very easy to put it back together
again since all pieces are color coded. It also would fit into a
pickup truck for transportation. The price is $300 picked up. I don't want

```
to ship it. Or I can meet someone within 100 miles of Abilene, Texas.
Thanks, Charlie Hugg, K5MBX

I have a CDE Ham IV Rotator for sale. It is the older model with the black
and white metal Control Box, not the Black Plastic one.
The Rotator needs cleaning and lubed and a new control cable screw
plate installed. Otherwise it works and looks good. Price is $185.
Thanks, Charlie Hugg, K5MBX

I have for sale a CDE lower rotator to mast mounting bracket.
It looks new and was original for a CD44 Rotator , but will fit any of the
CDE Rotators. Price is $20. Thanks, Charlie Hugg, K5MBX

I like mine. It's relatively easy to program, works well, has been rained on many times, and appears to be fairly rugged.

I'm thinking about getting a second one.

I've got one, too, and it's terrific.  The only thing I haven't figured
out is how to delete the contents of individual memories.  I can do it
on my Yaesu base station, and it would be nice if I could do it for my
HT.   Do you have any suggestions, others than completely resetting the
radio?

You can do it using the VX7 Commander software. I have done it many times.
I have not found a way to do it from the keypad though, it would be nice...

Thanks. I figured it might be something like that. I figure that if I ever travel to an area where there are repeaters, I could program the frequencies and settings for them ahead of time and then delete the contents of those memories afterwards.

Sure.

Just take a pencil, and where it says "50 Mhz" on the front panel, write in "27 Mhz". Everyone knows that all linear amplifiers work equally well on all bands and that suggesting otherwise is just a market ploy to get people to buy more boxes.

Don't forget to drive it with your "tweaked" Galaxy, Connex or other "import" radio with the mic gain at 100%, fed with a pre-amplified microphone. And remember to tune for >>>MAX<<< SWR, >>>NOT<<< minimum.

And remember to use the international test calling signal:

"AWWWWWWWWWWWWW-DE-OOOOOOOOOOOOOOOH..."

"AWWWWWWWWWWWWW-DE-OOOOOOOOOOOOOOOH..."

Steve, K4YZ

You'll probably need to add inductance, maybe reduce capacitance in any tuned circuits.

To lower frequency from 50MHz to 27MHz you need and / or bigger inductance
and bigger capacitance.
2 x pi x f = 1 / sqrt(L.C)

```

I would try to get by with the existing variable caps at the early stage until you have got the thing sort of working. There may be a small tuned input circuit or there may be a passive resistor. To start, I would double the number of turns in the tank circuit of the final and in the input coil (if any) and tune the variable caps to see if there is any output. I used to use a light bulb to coax fitting to look at how close I was getting to resonance. Remember there is a lot of voltage on the final so discharge the power supply caps through a 100 ohm or so resistor each time you fiddle. This amp may be grid-driven so keep the tests very short to avoid burning up the grids. There are ways of getting the coil/capacitor values correct without using the final voltage if you let any of the smoke leak out of the resistors.

Hell, I'd just keep adding turns until the dingus quits shutting down.
Sniff for parasitics, adds caps as necessary.

IF CBers had a bit of discipline, courtesy, and knew more, as a whole,
what they are doing, the noise could be decreased by
quite a bit! �But NO! �EVERYbody has to have an amp to talk 2 miles down the road, or to
the next truck right in front of him. �Before the 70s, I used to lay on my bed with a BACK OF
SET Radio Shack antenna and a Raytheon 5-channel CB and talk in a 5-8 mile radius. �We had
a regular round table most every night. �Everybody was courteous, took turns, didn't use power,
and we had no trouble talking--even when that roaring skip was in we could talk over it because
those people weren't using extra power, either. �When the BIG AMPS came along to replace self
confidence lost I-don't-know-where, you couldn't talk a mile away. �Now, more than ever, there
are operators who think THEY have to out-talk the rest in order to feel powerful and replace the
"leaking" testosterone. �Hey, I don't have a magic answer because you and I both know that it

\won't stop without some serious enforcement. �It still boils down, nonetheless, to the fact that
those truckers have those 40 channels that they can use legally. �The hams have the 10 Meter
band via licensure. �It STILL isn't the hams' fault that those channels are screwed up, nor does
it justify stealing frequencies from the rightful users--whether they are occupied or not.

I do have something of a solution, but nobody would like it. �Put CB up on FRS and MURS where
there is little occasion for skip, and the truckers wouldn't be bothered with all that noise. �Form
associations and use voluntary bandplans to separate users, so that interference would be kept to
a minimum. �Yeah, we know that wouldn't be met with joy, don't we? �We want to work "DX",
play with BIG POWER, and complain about how we can't talk without our amp. I don't mean to
be ugly, but that's what it amounts to. �Really, you can't have it both ways! �That is truly what needs
to happen; because the general public is NOT radio savvy, VHF/UHF is where CB needs to be to
prevent all those "turf" wars, skip, and racket. �It WOULD make a difference. �Not likely to happen soon. �Still, never say never.........................

Restricting to ham bands only buys a HUGE difference
in performance. Check out the Elecraft K2 and see
what kind of strong signal handling performance you
can get from an inexpensive radio if you have single
conversion right to the high-selectivity crystal
filter.

Third order IMD performance at 2 kHz is more than 10 dB
better than many of the expensive radios with general
coverage receivers, such as the FT-1000D and FT-1000MP
series, and is approximately equal to the 10 kilobuck
IC-7800! All because of the ham-band-only design and
some careful attention to design.

73,
Bob
K3PH

You're quite right, of course. I overstated my argument.

I think it's probably fair to say, though, that the sort of advantages that the K2 family (and similar radios) gain in performance by eschewing general coverage, might be very difficult or impossible to achieve at the price-point that the original poster was hoping for. A lot of the K2's improved IMD performance appears to come from having band-specific double-tuned bandpass filters in the front end, switched in via relays. This seems to be a technically excellent approach, but I can't believe that it "comes cheap". Reed relays seem to run a dollar or more each, in large quantities.

PIN diode switching of bandpass filters is another possible approach, but I don't think you'd get the same sort of performance out of it.

At a sub-$200 retail price (which probably works out to under $50 bill-of-materials cost) the designer is going to have to make some pretty hard decisions about where the money is to be spent. The additional performance available from a band-optimized design (e.g. the K2) might not be "in the budget" at the lower price point.

Consider that the K2 is between three and six times the price that the

OP was looking for... and it's a kit, has only 15 watts of output, doesn't include a power supply, and I don't think it includes a microphone either.

There would be some very, very interesting tradeoffs and design decisions to be made, in any project to develop a sub-$200 mass-market-acceptable SSB HF rig. Possibilities:

- Run the finals on 24 volts, so that acceptably-linear operation could be achieved from cheap power MOSFET parts?

- Use some of the new hybrid FPGA/DSP/microcontroller chips, to put all of the control logic, audio filtering, etc. on a single chip?

- Limited duty cycle, to reduce the need for heavy/expensive heatsinks and fan cooling?

Even if its sub-$500, that would still be a blessing for a young ham thats trying to raise a family. e-bay is ok if you don't mind taking the chance that the radio will be DOA when you get it, and not all clubs have the resources to be able to set up a new ham with a "loaner rig" to get them on the air. Something basic that will get them on the air without breaking the bank would go a long way in being able to promote the hobby with young people.

Well few of us start off with a new car
So for the dollar impaired how about
TS-520 - $180 with shipping has power supply
E-Bay completed

Another TS-520 with MC-50 mic -- $275
E-Bay Buy It now

Lots of old rigs for under $500

I think the things that holds up youth from becoming Hams or getting on HF
is really
1. The code (weak excuse)
2, The internet (talk anywhere)
3. The magic of radio was 20 - 30+ years ago - not today
4. The test as compared to CB, FRS

"I feel your pain." Seriously, you have a great point. I am now studying to re-acquire my General license (I'm 50). Yes, things have changed quite a bit since my days with a reasonably priced HW-101.

But, I think QRP is where some neat high quality stuff is available, especially in kit form. It's also a great way to start into ham radio.

Regarding CW as a barrier to many new hams, I don't know. The "old school" approach is part of what I like about amateur radio. Nostalgia is not worthless. I hope we don't lose CW.

Nostalgia is attractive in other areas. Audiophiles have returned to tube amps for many years now. Some of the units are set up so the owner can enjoy the tubes' cool purple-blue glow varying with the music. Baseball is largely nostalgic. I'm sure there are other examples.

I guess my point is that amateur radio shouldn't try to compete with internet, or whatever. It has a sort of historical niche...it can be pretty cutting edge and nostalgic at the same time.

I would recommend QRP as the best entry into ham radio.

john

In 1980 the HW-101 sold, in kit form, for $399.95 in the fall 1980 Heathkit catalog, with the optional CW filter adding another $44.95.

See URL: http://www.elinkusa.com/hw-101/HISTORY.htm

Using an inflation rate of 3.5 %; $400 in 1980 is $978 today -- the cost of a IC 706 MK 2
And the ICOM is Factory assembled, all mode, and covers HF and 6 meters (100Watts) and 50 watts on 2 meters plus 20 watts on 440 MHz. It receives from 30 kHz to 199 MHz and from 400 to 470 MHz.

Golly John straining the old brain cells.

First rig was a used (15 year old) Hallicrafters SR-160 - paid $100 for it in 1977 when I first got licensed
Needed repair and new finals. Power supply needed recapped.

But my very first "rig" was a homebrew crystal set - 1947 (Oatmeal Box and all (;-))
Then a Knight kit OceanHopper - 1948
Next was a Hallicrafters S-40B
Then a Halli S-38
And the US Navy let me use (;-) an ART-13 and ARR-15 (Collins Gear) to send and receive Morse code on Pacific flights
Next was a Knight R-100

Heathkits I built were a Heath Linear SB-230, SA-2060A Antenna Tuner, Heath Color TV set (took months to build), as well as the usual VTVM, Oscilloscope, Signal generator, etc

Should have kept them all (;-)
--
CL -- I doubt, therefore I might be !

Gee, put APRS on 'er and just go to findu and look @ the map (;-)

Just kidding. That LoCATor is pretty steep $$ wise for a turtle...and it looks like it may be in the 220 band...215-235. Nifty beam though - rather sturdy construction.

ml,

Let me try to clarify this whole thing and perhaps give you the correct terminology to be better understand and to better explain what you are asking..

First, whether it is done in what you call a "clone mode" or "by computer", the radio still has the capability to fill memories via an external (data or computer) port. If the software writer can find, or figure out the protocol, he can write what you call a driver to get data into the radio's memories. You just hook up a computer to the two radio's data connection when they are "cloning", and look at how the data is sent and duplicate that protocol in your computer program (driver).

Many radios that have external programming capabilities, have the protocol either published or hacked by hams (I've done some), so it is on the web somewhere.

Second, some radios also have the capability of being controlled in a real-time mode. This is called "CAT", but I don't know what it stands for. That is, they can be operated fully by the external port. I'll call this the computer control port. Icom calls their most recent version system "CI-V".
These radios also usually have memories and also allow loading these memories (and reading them) through the computer port.

The TMD700 has all this capability, and, yes it is a bit steep at $500, but is receives from 118 to 1300 MHz and has a TNC and the APRS software. I got mine used. Unfortunately, I do not have a list of computer controllable, dual band (2M & 440) radios. The Kenwood tri-band (2M 220, 440) hand held is such a radio. There are only 1-2 things you can't do from the computer port.
The 706 family has *SOME* of these capabilities and does include loading memories with frequency and much real-time control.

I'd try searching on something like: +"Computer control" CAT +"dual band" ham +"amateur radio" and see what you get. I did a quick look, but there was lots of noise in the hits (not much good stuff).

I suspect you want to ask is something like this:

"What dual band radios have memory loading capability via computer?"

"What dual band radios have CAT control?" Or "What dual bander has computer memory loading?"

73, Steve K9DCI

FS: Kenwood TS-830S HF Transciever
Looks and works VERY nice!!  the small little button for the noise
blanker is missing. But this transciever as stated looks REAL NICE.
Rated 9 Plus.
Frequency read out.
Comes with the original Box and service manual.
No microphone.
Price: 345.00   for a great rig.
ritchi50@optonline.net

There's the Yaesu 840 and the Icom 718, about $600, and the starter
Alinco, forget it's model #, about $700. Even the yahoo-whistles Yeasu
857d is only $689 nowadays.

Maybe there's not enough demand for such a thing. Moreover, the threshold gets raised for so many varieties of technogadget. If we take a possible parallel from the world of computers, a 6MHz PC-AT clone with 1MB of RAM and a 20MB hd should now cost perhaps US$25 and might well suit the computing needs of a lot of people (as long as they didn't insist on trying to run any version of Windozzzze on it). But, as somebody wrote a few years back, "The computer I want always costs $2000": the bar keeps rising.

Hi,

Radio Shack used to carry a 30' push up mast. It was segmented into 3 (4?) parts, with guy rings at the junctions. Much sturdier than the standard 1.25" masts commonly available. They were useful for small beams, but more so for supporting inverted Vs and dipoles. According to the local RS stores, they no longer carry them, and they don't seem to be available at the RS web page, though there is a "heavy duty" stackable section available. Anybody know of an equivalent mast today?

I often am on the internet when my wife picks up the telephone upstairs
thus breaking my connection to the ISP. Does anyone have a circuit
or know of a source for and "offline" indicators what will flash an LED
or something so the wife will know I am useing the internet downstairs??

http://www.hobbytron.com/CK007.html is one such.

There are 'self-powered' circuits around for this which do not require a battery, but I'd recommend avoiding them. Any circuit which draws more than a very small amount of current from the phone line may either take it off-hook accidentally, or trigger a wiring-fault indication at the central office.

I got a pair of professional grade, heavy duty self locking extendable paint roller handles, they extend up to 24' and are heavy enough for a small beam or a larger vertical. I used some key rings to attach the top guys slipped over the top threads.

Bob,

Now that is a really clever idea? Will look into it. A few other applications come to mind.

A better circuit - one that I've used as far back as 1980 for exactly that purpose - consists of a R/S 5 v reed relay in series with one leg of the phone line. "Standard" telephone line off-hook current is 30 mA, which will trip this relay and not degrade the "battery" voltage at the phone. Hook up a 12V "wall wart" and LED in series with the NO contacts and you're in business.

Mind you, this doesn't cut off the extension - it merely indicates that the line is in use. To cut off the extension there are other, more sophisticated (and expensive) devices.

Most of the circuits out there require a separate battery
to power the indicator because drawing enough current
from the telco loop to light the off-hook LED interferes
with the on/off hook detection.

Perhaps even better are those passive devices which
lockout other phones once the first one is picked up.
Like these (others, etc.)
http://www.glbproducts.com/catalog/
set__of_two_telephone_modem_lockout_sentry_4737042.htm

I believe this can be done with a single diode (some kind
of breakdown device), but I can't remember which kind or
find the circuit just at the moment.

Hi, I donated last yr many old QSTs & CQs to my local radio museum in
Bowie MD. I am in need of values for tax purposes. Is there any good
reference web site? I have looked at GOOGLE & e-bay for help, but real
old magazines seem to be rare!

They were 1920s on up, including CQs in 1940s up.

Hello all.

I have a National Panasonic RF-5000 (1972) I'm looking to sell, but
would like to replace the telescoping mast antennas first. One is
broken at the top and the other is somewhat bent.

Does anyone know of a source for these, or possibly a RF-5000 for
parts?

The radio is in otherwise excellent condition, but I think replacing
the antennas would increase it's value.

Thanks in advance,
Phal

Ref my original msg.  Yes my old corded phone had the indicator
built in, but it went on the blink so had to buy a new one
from wal-mart.   Shuucks I'll just run a powered LED fed from
the basement where the computer room is, and plug an ac adapter
into the master switch so if I turn on my computer a flashing
led will be on the wall upstairs and it wont even involve the
phone line (except to warn that I am down here hacking away
on the internet.)

I'm interested in obtaining a used rotator for my three element beam. I don't have a lot of money to spend (retired, SS) so I have to look in this direction. Anybody have one you aren't using that is just collecting dust? Thanks.

HT33A. The bias xfrmr fried a few tears ago. Before that it worked great. Im taking any reasonable offer on this. No shipping as it weighs too much.

HT32B. This transmitter is in very nice cond. Very stable and looks good.. Best offer on this too.

Im moving at the end of May and this equipment has to go. Pick up omly close to Madison Wi. email me for my phone no. Tx, Paul.

Alan;

www.randl.com carries the ROHN telescoping masts in 30, 40, 7
50' models.
They are in Ohio, and unless a ROHN distributor is nearby your
QTH, truck freight will be the only choice. BE careful & use gloves.
Good luck,
Jim -K4SQR

Thanks.  I think I may have already looked at them and they wanted
almost new prices for re-builds.  I'll look again and see if it's the
same people.  Thanks again.

Jim

All,

Many thanks for the various pointers. I checked with the local Lowe's, and the 30' mast is a special order item. They are seeing if they can order me a couple. If that falls through, I will probably go with the Rohn.

Most "proper" phones can be connected in a "chain". The main phone, when off hook, automatically disconnects the later part of the "chained" phones.

Most modern modems have this function as well.

When the XYL lifts unhooks the phone, there would just be a dead line as long as the modem is online.

It's possible that the Taiwanese Wal-Mart brands doesn't include this option and if it is so, you can easily build a chain by adding a small relay that disconnects the other phones in the house as soon as the modem line consumes any current. Remember that the line impedance should be around 600 Ohms.

This is a simple piece of design, just place a small resistor in series with the modem, drive a small mosfet with the voltage drop over the resistor and trip a small relay. I don't know your line voltage in the US but I'd assume it's 48Volts, so a 48Volt modem should be dirt cheap as it's telephone standard. If you wanna do it a bit more fancy without the relay, use a pin diode to cut your dear lady off... It's even cheaper!

Cheers

Dan / M0DFI

The venerable Kenwood TH-F6A has 3 speaker mics as options (4, if you count the clip mic/w earplug). The least expensive mic (SMC-34) seems to have it all, remote & volume control. The SMC-33 has just the remote but no volume control. Remarkably, it costs twice the amount of the 34, that has the remote & volume control. Another Speaker mic, the SMC-32 has neither remote nor volume control and is almost as costly as the SMC-33.
I know I threw a bunch of letters & numbers at you, but in essence, what I'm alluding to is why does it appear that the remote mic with the least features, cost the most. Can this be another ill-advised Kenwood marketing ploy? Has anyone put a handle on this? I would like to buy a remote mic, but frankly I'm puzzled and the salesman hasn't the foggiest. Help someone ... anyone? Thanks kindly in advance.

Cordially,
west

Kenwood Ts-870s transceiver,
 10 through 160 meters. Has built in tuner and Dsp, These radios are
known for their great sounding audio. No Microphone, Comes with power
cord and manual.
This radio works and looks GREAT!!!! I used it daily but changed all
my gear to AM Boatanchors. :)
Price: Shipped and Insured 1035.00
   I take paypal or postal money order.

Amazing! The AKC knows EVERYTHING, or so it seems about homosexuality.
Wonder how that happened? Coincidence? Doubtful.

> We will own 10 meters in the next 5 years.

Even less when the Uncle gets off his duff and comes to terms with WRC-03 and the rest of the world, ie, no code.

The only reason the Uncle is dragging his feet, is because it won't make them any money to line his pockets, like forcing DTV down our throats so they can auction off all that space and filling the landfills with perfectly good TVs. Dumb, real dumb.

But can the Keydown Masters still get amps in the real world? Answer
Yes!!! I can get them any time I want and to make it even worse for
the anti keydowners... I sell them as well. I have been selling them
and buying them way before ebay or the internet and I will even after
they are gone... Now what anti keydowners???

Thanks for your offer to help, OM. Yours is only the third
response I've gotten to my request (sad, eh?). A gentleman
in Wisconsin was able to supply me all of the parts I needed
for just the postage cost (I'm going to force him to accept
some money for the parts, however!).

Thanks and 73,
Dean K5DH

No problem, you're quite welcome. Just hope you understood, I have "forgotten" what those parts looked like exactly, so I wanted to be able to match them. While most "antenna posts" may look the same - a dial glass won't. At any rate, glad to hear you got your supply. As to these parts, many times I strip things down and sell the parts dirt cheap. I don't look to get rich off any one part - I "try" to offer a decent price for folks like you to do what we do. Hey, I scrounge too for parts to do projects! If I don't have it - I have to go look too. I love homebrewing myself and doing Tube type Ham and CB rigs (leisure and repair).

Hi all,

I found a manual on Tom Gootee's web site: http://www.fullnet.com/u/tomg/gooteesu.htm, oredered it and paid for it via PayPal. Now, almost three months later, I still have not received the manual nor have any of my numerous e-mails, voice mails, or messages left with someone who occasionally answers his phone been returned. Does anyone know how to get ahold of him or what may be going on?

Thanks,
Stan

I have been using the Diamond K400C mounted on the lip of the bed in my Ford Ranger with Hamsticks successfully for four years.

I'm planning on moving up to a heavier antenna system, 500 watts on 60 meters [50 watts ERP], and am looking for manufacturers of sturdier mounts short of welding a support to the vehicle frame.

Who has comments? Pls provide URLs either direct response or on list.

Have you got a VBCrLf at the end of the command string?

Cheers.

Ken

We bust truck stops selling keyclown gear.
We slap amps of eBay DAILY.
You will NEVER stop the AKC.

If you have an NI card, you are allowed to download the full suite of
NI VISA & GPIB software and run Measurement & Automation Explorer. You
should be able to type commands to the instrument and see responses.
Don't know if the 8568 will respond to a standard *IDN? query, but
that's one thing to try.

Like Ken said make sure you are sending a newline \n, ascii 10 or hex
0a or control J at the end of your command or query. You also have to
configure your computer to use 0x0a as the terminating character on
receives otherwise it will keep waiting for characters until you hit
the timeout.

I use VB6 with the visa32 library for GPIB, and key points are the same
as for using the manual window in measurment & automation. The visa32
documentation has an example that worked well for me.

This assumes your cable and adapter are good and that you have set a
valid address on the analyzer.

Whatever happenet to a simple to operate 100watt HF rig that transmits and
recieves??... something in the way of an inexpensive, baseline, HAM band
only rig... maybe along the lines of the re-production of the TS-130S.

I was thinking more along the lines of inexpensive, entry level equipment... the ranks of licensed operators is rapidly dwindling as all of us old farts are dying off. The only time that there seems to be any push to increase ranks is after a disaster, when the infrastructure is wiped out and all that is left are the HAM radio operators. I believe that a lot of prospective HAMs are put off because of 2 things....
1) The expen$e of buying new equipment, antennas, towers, etc. Most prospects don't know that you gan get a workable station on the air for just a couple of hundred dollars. All they *see* are the tower systems, and high dollar radios where the HAM has been licensed for 20+ years and has built/accumulated a top drawer station over the years.
2) The equipment is getting to where you have to be an EE just to figure out what everything does. Newbies need to have a simple to operate station so they can learn the basics, then after they get a handle on it, they can start building a station with some of the latest and greatest, state of the art, toys.
I don't know about you, but my first station was nothing more than a used TS-520S, and a wire antenna(40/15M dipole), a borrowed MFJ antenna tuner,

and a straight key(no voice privileges for novices then)...That was all I could afford at the time, and that almost broke the bank. I was a little overwhelmed with the 520 when I first got it and it took me a while to really feel comfortable with the rig. Imagine the new HAM today with something like a TS-2000.....if they can afford it. Even tho I have been an active HAM since 1984, I have had my TS-480HX since July, and I *still* don't know and haven't figured out all it will do...and thats running it mobile!! No tellin what it would do in the shack. Would I recommend the 480 for a newbie?? not hardly... but for an experienced HAM, its a great rig that will do everything you ever dreamed of.
There still needs to be an inexpensive, easy to operate, entry level, HF rig, made available to the new Novice.

What kinds of rigs/stations did the rest of you *start* with??
What do you think that *most* young prospective HAMs would be able to handle to get into the hobby??

A Heathkit AT-1, 15 watts, crystal controlled on 80/40/20/10, used on 80 and 40 CW Novice band in the early 1950s. Receiver was a National SW-54. Antenna was 120 feet of TV twin lead using a small home made tuner [made by my Elmer]. [Total cost $65].

On my first weekend I earned the WATV award :-)

On my second weekend I earned the MLL Award :-)

On the third weekend I earned the OTA award.

On the fourth weekend my Elmer responded to my awards with corrective action.

Praise the Lord for Elmer [Ralph Tedford, [W1GID ?] SK]

Subsequently, been on the air for 50+ years.

The problem is the competition. You can buy a NEW computer for $200, hook it up to broadband and be able to talk around the world, download video in almost real time, get the news, sports and things that you will never see or hear on the radio. No tests, NO MORSE CODE, no controls.

The days of electronics experiemnters going to the "radio shop" and buying some wire, tubes and spare parts and hearing people from around the world are long gone. The mystery is gone, the parts stores are gone and it seems that the desire to work to get an education is all lost in the rush.

Cheap rigs are simply not going to do it. There are so many used rigs on the market these days that go for $300-$400 that even mainland China with their factories that pay so little can compete. As for new rigs, everyone wants a simple voice rig with a digital VFO, a gazillion memories and an AUTOMATIC antenna tuner. You might as well not even include CW, most prospective hams can't be bothered to learn it.

Education and outreach is the only thing that will. Apple computer started the concept of "product evangelism", preaching how good the Macintosh was to the "great uncomputered". Their head evangelist, Guy Kawasaki wrote several books on the subject.

If ham radio is to continue, you need to "product evangelize" ham radio. Go out and give demos to schools, scout troups, youth groups. If there are any kids in your family or neighbors that are interested in computers, take them to hamfests, they'll go for the computers, but the radios may catch their interest.

It's also about time to change the license tests. Drop morse code. Add more good operating practice.

Here in Israel I hear mostly European hams. They are polite and careful operators. When the "skip rolls in" to use a term from another service, it seems like CB. Gone are the polite carefull guys, the U.S. phone bands sound like "lid city". And the CW is not much better, most of it is sent by computer and the same old garbage you hear on SSB, sent by people who can type and have a computer program to copy Morse.

Another pet peeve of mine is sstv. It was "neat" seeing it live from the Mercury space capsules. Fourty years later it has no technological relevance. Why do we have to give up 20-30kHz of the 20 meter band 24/7 for it?

Geoff.

With the advent of microprocessor based Ham rigs- many more features and wide band (HF, 6M, 2M, 440 and SWL) coverage is easily obtainable at about the same price as a new TS-130S (about $700 new 1980's). See ICOM 706 Mark II G. The "G" is an all-mode transceiver provides 100 watts on HF and 6 meters and 50 watts on 2 meters plus 20 watts on 440 MHz. It receives from 30 kHz to 199 MHz and from 400 to 470 MHz. For $899

In the 1980's you would have paid twice that for separate radios to cover those bands all mode

Lots bang for the buck

As far as complexity -- most have a menu presets -- choose your options and will operate much the same way as a TS-130S

CL -- I doubt, therefore I might be !

Leanne, TU, I'm looking at them.

I used a stake hole mount a long time ago with fair results.

I may have had installation issues. I'll take another look.

DD, W1MCE

Yet at anytime of the day or night I am able to buy export radios and amps
as large as my car. You are fighting a lost cause. I'm sure you think it is
a noble fight, but again you are wrong. You simply fight this fight as you
have nothing of REAL value to fight for. Some days I almost feel pity for
you and your kind as you will never find true inner happiness as we that own
the aforesaid equipment will always control your life, your feelings Your
emotions show with ever desperate post.

You completely missed the point..... A *simple to operate* 100 watt HF rig,
NOT microprocessor based, HAM BANDS ONLY...
What was $700 over 25 years ago, should be able to be produced today for
just a hundred bucks or so. When the latest electronic toys come out, they
command a premium price, and after a couple of years, the price goes down to
where a working stiff can afford them.

Frankly, I'd be astonished if anyone could build a radio to those specific design goals (non-microprocessor-based, ham-band, 100 watt, roughly $100 retail price). I don't think that the combination of technologies, market size, and price can be achieved. It'd be a very interesting challenge to design, to say the very least!

That's not to say that somebody shouldn't try.

My reasoning is roughly as follows:

- Ham-band operation requires stable frequency operation and tunability. This either requires a very stable VCO, or a synthesizer/PLL system of some sort.

- Mass-production consumer electronics, most commercial comms electronics, and military electronics have long been moving away from the classic sorts of finely-tuned-and-temperature-compensated analog oscillators used in a lot of the sort of classic ham gear you're referring to. These days, decent air-variable capacitors with good bearings are either special-production builds (and horribly expensive) or are used or "new old stock" surplus and thus not suitable for mass commercial use. The same thing seems to be true for a lot of the other "classic ham" electronic components... they're being end-of-lifed and we're lucky to be able to stock up our junk drawers before they're entirely gone!

- Today's low-cost radios are almost all based on synthesizer technology of some sort, with a microcontroller driving the synthesizer. I wouldn't want to try driving/commanding a synthesizer of this sort without a micro - they aren't set up for it.

- Multiple-HF-band operation requires band-specific low-pass filters... certainly after the amp, and perhaps before. You could probably get away with a filter system using less filters than bands (e.g. one filter for 10/12/15, one for 17/20, etc.) but you're still going to need some LPF switching and some fairly hefty inductors.

- Restricting to ham-band-only probably doesn't buy you all that much in savings or performance, these days, due to the large number of bands. In order to gain big savings, I suspect you'd have to limit yourself to a monoband radio.

Now, the idea of doing a simple-to-operate, straightforward HF rig with decent performance isn't a bad one at all. I do suspect that in order to make it manufacturable at a reasonable price you're going to have to accept _some_ degree of LSI integration and microprocessor control. That doesn't mean that it needs to have a massive set of features, lots of bells and whistles and gawldernblinkinlights, etc. It could be a nice, clean front panel.

The closest I currently see to what you're looking for is probably the Ten-Tec Argonaut. However, it's not a full-power barefoot rig... 20 watts... and it's at least five time your cost goal.

I won't say it's impossible to get the retail price of a 100-watt multiband ham-HF rig down to under $200. However, I suspect that it'd require a very great deal of optimization and integration, a lot of use of modern technology (i.e. spinoffs from today's commercially-available RF and DSP chips), and a development effort which would require a potential marketplace of hundreds of thousands of units (or perhaps millions) sold in order to justify.

It'd be interesting to see sorts of HF rigs might be build around a modulator based on some of today's cellphone chip cores and IP... direct conversion, high-performance I/Q phasing modulators, and so forth. More work up front, but (potentially) a lot lower per-unit incremental cost once you get into volume production.

Unfortunately, I'm not sure that the size of the market would justify the investment, needed to create the sort of radio which you feel could help maintain and increase the size of the amateur-radio market in the way that you'd like :-(

Don't think I missed the point at all
Labor rates UP
Factory space cost UP
Parts UP
Advertising cost Up
Taxes UP
Convention Rates, Travel, Hotels, UP

And at an inflation rate of 4% per year --  the $700 1986 radio would be
$1533 today (sound familiar)

I doubt any mfg can produce your $100 radio (with a 40% margin u wud have to
build it for $60 !!!)
Maybe in China Huh ?

Even the Elecraft basic radio -- (u build it) is $359
And it is CW only -- 4 bands 40, 30, 20 and  17 or 15M
But they are selling a lot of them - folks still love to build

--
CL -- I doubt, therefore I might be !

Most are able to be programmed with a computer... simple spreadsheet type
software and a cable that plugs in.

thanks for the responce and not to sound rude, but i am very aware of
that fact, from the below,

 however what i am looking for is a specific method of programming,
communicating to the radio via means other than cloaning mode commands
i need to find out witch rig's 2/440 have that specifically as an
option

the software i need to use, is not comptable w/rigs that program via
cloan"" mode

if anyone knows i'd really appreciate the help i know some rigs do it
only found the 2 below

tnx

I would think that most modern rigs would allow that. All of my
radios do. I have a Kenwood TH-F6A, TH-D7A, TM-D700A and Icom IC-746.
All are programmable by computer without cloning from another radio.
I wouldn't own a radio today that didn't have that capability.

I guess you are going to have to tell us what kind of programming you
are talking about.  When you "clone" memories, you hook two similar
radios together by cable and transfer the data from one to the other.
We are talking about using a computer to transfer the memories, which
has nothing to do with cloning per se.  My TM-D700, which I assume is
what you mean by TM-700, is no different from any other radio that is
programmed by computer.

do you have some pics? I "think" I may have some but it's been so long since I stripped them down I can't recall. I ask for the pics because as you know - one person's idea of antenna binding posts may be a tad different than others - for example. I want to get you the "exact" parts if I have them. I had a couple complete set ups at one time which I stripped down. I've since sold most of the coil forms and some miscellaneous. But I THINK I still have some other stuff in my junk boxes. I just need to match them to your needs.

Welllll, from programming my several radios, most of the software used, does in fact emulate the cloning of radios, but with a computer on one end...I think, he

is asking for real time control of the radio so the computer takes over the radio, like on some of the "scanner" programs out there written for the "black box" scanners, or the "high end" scanners..

I have a brand new Heil RP780, it was designed
for the IC-7800 and also the IC-pro pro11 pro111
radios. This mic new cost $269.95.
Has Cord for Icom and Hand PTT and also Stand.

If interested, please leave Email.
It's 2 days old. Used once for 5 min.

Sold the radio so have to sell the mic.

73

Steve

The Kenwood ts-2000 has commands which allow the reading and writing
of specific memories, direct VFO tuning, and so forth.

It's sorta expensive if used only as a 2m/70cm rig, though.

Although it's possible to program the memories on many radios using computer software (and, I agree, it's almost essential in these days of multiple-hundred-memory radios), the actual _protocol_ used in the programming of most radios tends to be cloning-based. That is, in order to update the programming of the radio, you first upload its entire nonvolatile-memory bank, then update specific portions of it using PC software, and then download the updated NVRAM image to the radio.

To the radio, this process looks like a "clone another radio" followed by a "be cloned" operation. It's relatively slow (takes a minute or two, plus image-editing time) and is disruptive of the radio's normal operation.

What I believe that the original poster wants, is a radio which allows selective memory updating, direct tuning commands, and so forth, via software control.

I'd suggest checking out the Linux/Unix "hamlib" package, which has drivers for many of the radios which have such capabilities.

```

greatful for everyone's trying to help out

ok i was told i am using the correct terminology however it's kinda obscure so not many know about it

and i am not smart enough to describe it better   i'll take another stab

when a radio's memory is addressed for programming by a pc, it's typically done what is know as 'clone mode' an example of this would be any yaesu 2m radio(best as i know)

contrasted to the tm-700's method of programming via it's programming port to pc

yeah all radios have software that might accomplish the same thing but do so via different metods of addressing or accessing the memory

i know of a software developer that writes fantastic software for the apple he can only modify drivers to work with his program for radio's that can be programmed via means other than clone mode

unf there is not alot of ham software outthere for mac's and only one that allows radio memory programming for 2m/440 etc

sooo

the current software has drivers for rigs that are now almost disco, or

```
kinda a bit expensive  tm700 a litte much for me  iwas hoping say to get
a tm271  or simular  but looking thru the manuals/broshures  of some
newer rigs and it dosn't say a thing about it's memory access

if i find such a radio he'll write the drivers for me

hoping that sombody might be able to point me in the right direction

Try this for the Motorola Syntor radio;

http://www.piexx.com/index.php?main_page=product_info&products_id=7

And the documentation;

http://www.piexx.com/SynDoc/SynDocC.pdf

Its just for the 2m band, but it is a quality radio!!

It seemed that it might be a relay problem, so I was going to check
relay status on LPF board, when it dawned on me to hit the reset
button.
Voila!

Kind of wierd, but I am sure Sieverville will get my rig some day.

Thanks for the help from all.

A direct connection to what? A battery? A power supply? Switching or
transformer-type? What was it the wall wart was powering?

It's not at all clear what you did.

  i purchased a ce 4b with 314 broadband mixer thru the internet, i
plan on using it to tune up
my ham rigs but i cant figure out how the monitor part of the cushman
works. I know it has a
314 high sensitivity 20-1000mhz mixer module, does this module allow
the monitor to receive a signal? If so should there be noise all the
time or is there a automatic squelch ?
 Also i didnt get a operators manual so any basic operating tips would
be a big help. The ce 4
only recieves very strong signals and stays squelched otherwise, im not
sure if this is normal
or does something need repair.

I'm still confused. Programmable radios use serial data with different types of ports on the radios. The TM-D700A happens to have a standard 9-pin serial port, but I see nothing in the manual about accessing anything in the memory.

Dick

Every year, Shelly the tortoise gets lost or manages to escape the garden.
It can take days to find her. I would like to build a locating device so
that I can track her down.
The basic requirements are:

a) that the 'transmitter (transponder?) on the tortoise is as small as possible.

b) that it can be made by an electronics numpty. I have basic soldering skills, and can eventually work out a circuit diagram.

Can anyone point me in the right direction?

TIA

So far you have not prevented me from purchasing amps on eBay. I wouldn't go around bragging that your vigilant either, unless this is what people on foodstamps consider vigilance. I'm sure I accomplish more positive goals in one day than you do in a month.

Thanks - that's excellent Howard - it looks just the job.  So all I need to
know now are the 'basics of direction finding'..  I presume I need to wave
the aerial about a bit until I get a stronger beep beep? (tell me I'm on the
right track? or is there some magic method to homing in on a beeping
reptile?

The basics are a directional antenna and triangulation. Do they still sell those RDF things for watercraft which use a loop antenna? Same principle. A directional FM antenna (like a yagi) which you can rotate to find the strongest signal. Then move a distance and plot the max signal as another line on the map. Assuming your tortise isn't moving that fast, go the the "X" on the map and retrieve your reptile.

There are lots of miniature FM transmitter kits available, but beware that the range of many (most?) of those devices may be limited to a range where you could just locate your creature by sight (particularly those which can be powered by photo-voltaic cells :-)

Note that you could also use preassembled GPS and cell-phone modules (like those available from one of my favorite toy-shops: www.sparkfun.com) and create a box which you can call on your phone and will report the tortise's current location. You could have the first tortise-lojack on the planet! :-)

It is rumored that many high-value items (besides autos) have this kind of secret locator transponder devices installed in them.

I have a remote control box for Icom IC-4KL ..It will allow you to
drive the IC 4KL amp with an exciter other than Icom..Allow you to
change bands manually. Has provision to key the amp and connect ALC.
back to exciter. Professionally built as a test fixture..NOT AN ICOM
DEVICE... [probably work with IC-2 KL also] Picture available.. Yours
for $50.00 plus shipping..W4PQW

But can the Keydown Masters still get amps in the real world? Answer
Yes!!! I can get them any time I want and to make it even worse for
the anti keydowners... I sell them as well. I have been selling them
and buying them way before ebay or the internet and I will even after
they are gone... Now what anti keydowners???

I forgot to mention, you can buy just the transmitter and construct your own receiver. The transmitter is FCC certified and I was able to look up the specs on the www.fcc.goc website under OET equipment certification.

w4pqw@cox.net (known to some as w4pqw@cox.net) scribed...

> I have a remote control box for Icom IC-4KL ..It will allow you to

     <snip repeating message>
     Posting the same message repeatedly to the same newsgroup is far
more likely to get you ignored than it is to gain you customers.

     You may wish to take note of this quote from one of the Usenet
user's guides.

-=-=-=-=-=-=-=-=-=-=-

"How to advertise on Usenet
--------------------------

There *are* acceptable ways to advertise in Usenet newsgroups.

1. The on-topic notice

If you have a product or a message that is specifically related to a
particular Usenet newsgroup, and you want to let people know about it,
it's *usually* all right to post *one* notice about it..."

-=-=-=-=-=-=-=-=-=-=-

     ONE notice. Not two, not three, not many. One. Would you advertise
this item, or any other, multiple times on the same swap 'net on the
same day?

     I would hope not. The same principle applies to Usenet. You can
find more details on dos and donts at this link:

http://www.faqs.org/faqs/usenet/advertising/how-to/part1/
